## Comments

Forward any sites you feel should be added to me at [ben.benavides@gmail.com](mailto:ben.benavides@gmail.com)

This is a living document and at the time of publication all links were active but don't give up if you get the "Page Not Found" message. If a link does not work, try copying the link to the URL window. If it still doesn't work place the cursor at the end of the URL address and backspace to the first slash and hit the enter key. If it still does not work keep backspacing to the next slash and press the enter key. Keep doing this until you either get a hit or enter the home page. Once in the homepage you should be able to find what you are looking for. But we all know the chaotic nature of the WEB and over time some sites will be pulled off or no longer function. If this is the case, you have a final recourse - the wayback machine, <http://www.archive.org/>. Copy the entire URL and paste it into the "take me back" box in the homepage. This should take you back to the original homepage and from there you can pick up key words to find what you are looking for. I have used it extensively and very rarely, although it does happen, has it come up short. You will run across several links in this handout that have a wayback machine URL. The original locations were no longer active so I gave you the web page as it was saved by the wayback machine.

I realize also that we don't think alike. If you feel some links do not belong in a particular category let me know and I will make the adjustments. If you feel a new category should be added please justify it, and if you discover links that you think are relevant to the handbook please submit your list and I will update. Together we can create a valuable guide that is not only useful to the intelligence analyst but also beneficial to all branches of the military, and civilian agencies. The idea is to develop something that any branch (infantry, artillery, armor, etc) besides MI can use for their own intelligence gathering. Remember, "Every Soldier Is A Sensor". We could also apply this to the civilian world and say "Every Citizen Is a Sensor". A good example is the individual that spotted the smoking SUV in Times Square and alerted police to the situation. Had the contents smoldered long enough it is quite possible the situation could have turned into something more serious.

While I have tried to get you to your objective as quickly as possible, there is still no substitute for effective searching techniques. I strongly recommend looking over this very basic WEB searching techniques site <http://www.lib.berkeley.edu/TeachingLib/Guides/Internet/Handouts.html> and download the tutorial with powerpoint slides and handouts. The information is from 2009 but still very appropriate. I also like Russ Haynal's Internet Training at <http://navigators.com/opensource.html> and I think you will too. Very easy to follow and digest the information even while working at your own pace.

There are two areas one cannot get away from on the WEB, pornography and theological/political agendas. I have definitely made sure that none of the links end up with the former, but the latter cannot be avoided.

I have been advised that I probably have published too much information and have made it easier for the criminal element. All the information gathered has been through open source harvesting and anyone with even the slightest knowledge of good searching techniques will be able to gather the same information. For example, the nuclear related portions in this handbook when merged together will produce a neat little file. You can gather this same information at the public library or by visiting several blogs and merging the results. Scattered throughout this handout you will run across material like Unclassified/FOUO, Law Enforcement Sensitive (LES), Restricted, Controlled Unclassified Information, Sensitive But Unclassified (SBU) and other caveats. Again, this is all open source exploitation. I did not hack into any sites! That's my story and I'm sticking to it.

**Those links that require a .mil or .gov return address are included for those authorized access, they will not work for those not authorized access.**

Prior to leaving the service of the U.S. Army, I established that this is my intellectual property and there are no applicable constraints on my sharing it with the public.

## Definition of Military Intelligence

The use of spies to collect secrets from enemy forces goes back as far as the dawn of war itself. However, the U.S. military has only developed a formal military intelligence framework within the past 100 years. Throughout this time the discipline has evolved and the definition has become more complex. At its heart, however, military intelligence is still about knowing what the enemy doesn't want known.

### Purpose

Military intelligence (MI) exposes weaknesses of the enemy forces. This in turn allows commanders to shape their battle plans to achieve maximum effect while risking the minimum number of lives. MI also reveals weaknesses in the security of friendly forces which also leads to a change in procedures that will lessen the likelihood and effectiveness of an enemy attack. This is why MI is such a crucial battlefield discipline. Practiced well, it can end engagements decisively and maybe even prevent them in the first place.

### History

Prior to World War II, Military intelligence forces took on other unrelated tasks that today would be considered out of the scope of MI branches. For example, prior to WWII, Army intelligence officers also did work in public affairs and psychological warfare. In 1945, the War Department created the Military Intelligence Division, but there was no clear direction as to how intelligence units should operate in peacetime. With the onset of the Cold War, military intelligence personnel had a new target even though the U.S. was not actively at war with the Soviet Union. Over the years improvements in communications technology have led to more scientifically-based intelligence collections operations.

### Types

There are several different types of intelligence sources and intelligence personnel. Imagery analysts examine satellite photos to determine the location of enemy troops and what kind of weapons they have. Signal intelligence collectors and analysts capture electronic communications and exploit them to determine enemy plans. Human intelligence collectors work on the ground, interacting with civilians, refugees, prisoners of war, even friendly forces to gain more information about enemy troops. All of these intelligence sources come together to paint a picture of the battlefield that commanders can use to find and destroy enemy forces.

### Misconceptions

When people think about intelligence operations, they often have visions of spies like James Bond in their heads. In truth, most intelligence information is captured from electronic communications, photos, or even open sources such as newspapers and television shows. Human intelligence collectors often work face to face to glean information from people, but they don't have jet packs or other spy gadgets. They simply know how to listen to people.

### Potential

As new methods of communication are developed, military intelligence professional will find new ways to exploit them to gain information about enemy strength and plans. Until a century ago, military intelligence operations were not well appreciated or well utilized. There is little danger of that situation returning in the future.

## Open Source Intelligence (OSINT): What It Is and What It Isn't

According to the [NATO Open Source Intelligence Handbook](#), November 2001, there are four distinct categories of open source information and intelligence.

**1) Open Source Data (OSD).** Data is the raw print, broadcast, oral debriefing, or other form of information from a primary source. It can be a photograph, a tape recording, a commercial satellite image, or a personal letter from an individual. A good example is a reporter embedded with forces in Afghanistan or Iraq. He/she is taking pictures, talking to soldiers, recording conversations and firefights, and taking notes with a pen or pencil. This is considered raw data until it goes through a conversion process to create a coherent product.

**2) Open Source Information (OSI).** OSI is comprised of the raw data that can be put together, generally by an editorial process that provides some filtering and validation as well as presentation management. OSI is generic

information that is usually widely disseminated. Newspapers, books, broadcasts, and general daily reports are part of the OSI world. An example is a reporter embedded with forces who takes the raw data and converts it into a meaningful article that is printed in newspapers, magazines or broadcasted over the air waves. OSI is what a Soldier would purchase at the bookstore inside the Post Exchange in the form of USA Today or Newsweek.

**3) Open Source Intelligence (OSINT).** OSINT is information that has been deliberately discovered, discriminated, distilled, and disseminated to a select audience, generally the commander and his/her immediate staff, in order to address a specific question. In the case of a battlefield commander, it would more than likely be answering the priority intelligence requirements (PIR) or specific orders or requests (SOR). OSINT, in other words, applies the proven process of intelligence to the broad diversity of open sources of information, and creates intelligence. Example: The meaningful article above (OSI) that was created from raw data is used to support an operation. It's quite possible that a photo accompanying the article may be of a house known to harbor insurgents. The photo in the article identifies the location and now can be used to support a tailored operation to attack the insurgents.

**4) Validated OSINT (OSINT-V).** OSINT-V is information to which a very high degree of certainty can be attributed. It can only be produced by an all-source intelligence professional, with access to classified intelligence sources, whether working for a nation or for a coalition staff. It can also come from an assured open source to which no question can be raised concerning its validity (live video of an aircraft arriving at an airport that is broadcast over the media). OSINT-V is OSINT for which there are either confirming or unavailable classified sources or there are no available classified sources disputing OSINT. OSINT-V is produced only when the analyst has access to classified sources.

Example: CNN reporter takes photos and reports on a bridge. Intelligence personnel are aware the bridge is vital for the movement of insurgent supplies; however, CNN is unaware of that. Classified information confirms that such a bridge exists. This in effect validates the reporting as OSINT-V, especially if the bridge is identified to be destroyed to keep insurgents from moving supplies. But, if there isn't anything in the classified holdings to deny the existence of the bridge, it is still considered OSINT-V since this is the first time the bridge has been observed and reported, and there are other sources like other reporters to backup the findings.

People in the intelligence business are realists and know that everything cannot be monitored simultaneously; construction of new infrastructure is continuously taking place around the world. We cannot keep track of all new buildings, bridges, roads or airfields being built. This is what makes open source reporting extremely valuable. It covers the areas the classical "INTS" are not assigned to cover. The only time OSINT-V can be disputed is when there is confirming evidence to deny the information.

Summary: How do I know when I have OSINT? The simple answer is the analyst does not have OSINT until the open source information has been processed and analyzed, and supports a specific requirement. The specific requirement can be a tailored operation or simply answering a question. The analyst has to be very careful when it comes to distinguishing between OSI and OSINT. Open source information exploitation is exactly what the name implies, that which is gathered/collected from open sources. In general, it is information that is available to the general public without restrictions unless it is copyrighted material. These include newspapers, the internet, books, phone books, scientific journals, radio broadcasts, television, individuals, and other forms. On the other hand, OSINT is an intelligence gathering discipline that involves collecting information from open sources and analyzing it to produce usable intelligence, and there isn't anything that says intelligence must be classified in order for it to have utility. In the Intelligence Community, the term "open" refers to overt, publicly available sources (as opposed to covert or classified sources); it is not related to open-source software. OSINT is distinguished from straight research in that it applies the process of intelligence to create tailored knowledge supportive of a specific decision by a specific individual or group.

## The Rise of OSINT in Threat Intelligence Analysis

By: Richard Hartley

Recent geopolitical events in Ukraine and the Middle East have highlighted the growing volatility of the world today. The emergence of states like Brazil, China and Russia underline how the world is moving to a more competitive place, with power more evenly distributed on a global scale. This structural shift in power distribution away from a consolidation of power in the West has been coined as the move from a unipolar to a multipolar world.

From another dimension, though, threats to governments and private sector organizations are increasingly fragmenting away from states and the traditional contours of sovereignty, and into the realm of entrepreneurial terrorist organizations.

Both of these shifts have implications for intelligence gathering in both the private and public sector.

Set against this changing threat landscape is the opportunity presented by new technology to gain more predictive intelligence about emerging threats to geopolitical stability. The recent tendency for regional conflagrations to spring up and surprise organizations raise the question of how much of these events are now predictable with the advent of Big Data.

Traditionally, risk identification and analysis has been mostly qualitative, performed by expert analysts covering a particular region who collate information themselves and then interpret and disseminate their findings. This is often a three-part intelligence process encompassing data collection, analysis and dissemination.

### **Investments in analytic technology**

The intelligence failings that were exposed in the aftermath of 9/11, and then again during the Arab Spring, focused on the deficiencies of the analysis stage of this three stage methodology. The hypothesis was that because independent datasets were heavily siloed, it was hard to see connections between different types of data, research themes and regions. The failure to co-mingle different types of data meant that connections remained latent, rather than visible, ultimately resulting in negative surprises.

To address this issue, data fusion technology investments were inaugurated which involved putting in place technologies that could sit on top of various data stores and draw connections between events and entities through link and network analysis to, for example, identify possible terrorist cells from transactional data. Taking advantage of newly swelled defense budgets following 9/11, companies like i2, Predpol and Palantir built analytic systems to try and address this issue. By assembling the analytic architecture to support an iterative intelligence cycle, the idea was that more connections and patterns could now be seen from the data and more insight therefore derived.

### **New data, new opportunities**

However, while the investment in flexible analytic technology resulted in more visibility in the connections between data points, it did not address growing informational deficiency -- specifically, surfacing hard to find low visibility information to show what was happening now and what might happen in the future. Thus, as more and more devices and platforms pump out situational information on a second by second basis, this information remains largely untapped to the detriment of the intelligence gathering process.

At a macro level, the decline of newspapers and the emergence of peer-to-peer information sharing platforms has fundamentally reconfigured where intelligence is situated and traditional conduits of knowledge are exchanged. Now, information moves at a lightning fast pace, with social media platforms out-sprinting publishing organizations in the production and dissemination of reports. The result is that the open web has become a reservoir of insight and a fossil layer for all content ever generated. We now require new ways to surface and explore this data at scale.

Until now, collecting this type of data was an extremely difficult and time consuming process, involving the manual aggregation of hundreds of new articles everyday by human event handlers and analysts to spot new developments. The joint proliferation and fragmentation of textual content has meant there is both more information to wade through and a greater variation of content. All this means analysts need to spend longer time on data collection, giving them less time for analysis, interpretation and their point of view.

A recent example demonstrated this problem: a predictive tweet posted by an Islamic State of Iraq and Syria (ISIS) activist not picked up by anyone which may have given a public warning that ISIS sympathizers were preparing an attack on the border with Yemen. A few hashtags began circulating in early June relating to Saudi security efforts targeting Al Qaeda in the region of Sharurah. Using one of these hashtags, one Twitter account posted: "In Sharurah [we have] our greatest knights and suicide bombers. They will commit a suicide attack in the police investigation building with the help of God."

### **Technical challenges**

Two types of technical problems involved with this type of Open Source Intelligence (OSINT) data are worth highlighting. The first is to identify the relevant items of information and collecting the data to remove it from its original source. The second part is presenting data in the way which allows analytical investigations to yield insightful

results on an ongoing, dynamic basis. This is about providing data that can be queried in a way that is malleable, reusable and extensible.

In terms of the first challenge, while it can be costly to collect and store data, new advancements in data storage and relational databases mean this is now less of an issue. Indeed, recent allegations by Edward Snowden suggest that bringing in targeted data streams at scale has already been undertaken by governments with relative ease.

The significantly more challenging and valuable problem is extracting vital fields of information from unstructured text that can yield insight -- in effect, removing the noise and secondary data and preserving only the vital parts (such as location, threat classification, date and actors). Essentially, this means transforming unstructured textual data into coherent data formats which can be organized and queried in multiple dimensions.

The clear advantage of this type of data is its reusability: traditional qualitative analysis can be used once to answer a single question, whereas big data can be switched around multiple times to answer different types of questions iteratively -- show me all terrorist attacks in Algeria; show me whether this is more or less than the regional norm; now show me attacks using improvised explosive devices in Algeria, etc.

## **Event extraction**

A new algorithmic technique that can solve this issue is event extraction using natural language processing. This involves algorithms discovering particular items of information from unstructured text. This could include certain risk events (protests, insurgency, strikes, bomb attacks) combined with locational and temporal context.

Context can be provided by different types of extraction: geo-extraction (identifying locations from unstructured text), time extraction (identifying time from unstructured text), event extraction (identifying different types of events from unstructured text), and actor extraction (identifying different types of events from unstructured text).

Natural language processing works by identifying specific words (often verbs) in unstructured text that conform to a classification scheme. For instance, "protest," "demonstrate," "boycott," "riot," "strike" and variants all signify events relating to civil disorder. With statistical machine translation, these verbs can be identified in languages ranging from Arabic to Mandarin, giving a global coverage of civil disorder events.

## **Value**

The clear advantage of this approach is a real-time way to discover threat events hidden within the open web that are relevant to particular intelligence products and correspond to pre-defined parameters. Rather than personally monitoring a host of websites and data feeds on a 24/7 basis, intelligence analysts can set the parameters that are relevant to them and use algorithms to discover, extract and understand the events.

The monitoring is performed by algorithms, allowing analysts to focus on the analysis side of the equation -- saving them time and allowing them to deploy their resources toward more high value pursuits. Augmenting the analytic capability of analysts by delivering real-time data in a quantifiable and organized environment is the objective. This gives organizations early warning about low visibility threats, affording them time to conceive proactive mitigation strategies.

Furthermore, given the verbosity and denseness of text, it is also extremely difficult for human analysts to wade through text and link events to times and dates and locations and actors. Performed at scale, this is best achieved using algorithms which can, for instance, identify all the possible dates which relate to a specific event in an article, and then choose the most likely one based on a set of predefined rules constructed algorithmically and refined using machine learning -- a technique by which algorithms can learn and improve based on past performance.

Disaggregating events into different buckets (location, time, types, actor) enables precise and surgical queries to be run -- for example, recent incidents of protest in northern Algeria in a short period of time. As this data is in a quantitative format, it can also be exported to various visualization tools such as Tableau, CartoDb and Tipco to show trends and patterns in the data. A recent case study we performed with clients at Cyota looked at the spatial spread of Boko Haram activity from 2012-2014.

By running advanced queries, we were able to limit the data to just events that related to Boko Haram in Nigeria and classify event data into different types, such as attacks against civilians and attacks against the military. This type of

analysis -- enabled by the malleability of the data -- enabled subtle tactical changes to Boko Haram's activity to be discovered.

Outside of the time saved and re-deployed elsewhere, event extraction built on natural language processing can bring to the surface events which are hard to find, latent or in irregular news sources which only periodically contain new information. Quite simply, a human analyst can only cover a certain number of sources and it makes sense to cover regular reporting outlets where the informational frequency and replenishment is high. This forms a bias against longer tail online sources (such as Facebook accounts used by the Mali Police Force, or websites reporting on troop deployment in Russia) which may be less frequent, but provide low visibility and potentially high impact events.

The advantage here in event extraction using algorithms is its inherent scalability and extensibility -- the costs of monitoring new sources are far lower and don't involve the same trade-off as a human analyst would experience in having to cover additional sources.

Once these discrete events are extracted and organized, it is possible to find valuable insight such as the number of bomb attacks in northern Algeria has increased 30 percent in the last month or the number of protests in Burma involving farmers in the last 3 months increased by 50 percent. The value of this type of quantitative analysis is clear in terms of spotting surges of instability in countries and identifying unusual changes in activity that diverge from historical norms. For instance, our analytics platform picked up a surge in ISIS activity in Syria and Iraq weeks before mainstream media became aware of it, or, indeed, even knew that ISIS was a threat.

## **The way forward**

Open source data provides, at least theoretically, a record of recent history -- what has happened across a period of time and how change has occurred. It forms a bedrock of understanding why events have happened, informing us of the critical drivers and mechanisms which have brought it into being.

Piping this open source intelligence into the right algorithmic environment in real-time can yield insight that would require hundreds of analysts to emulate in terms of physical data collection. In light of the speed, scale and flux of online information, it makes sense for both private organizations and governments to use this type of technology to augment the capabilities of their analysts.

*Richard Hartley is co-founder and head of products at Cytora, where he works on product strategy and design, and closely collaborates with customers to define requirements and usability. He previously worked in product management at eBaoTech, a Chinese software company based in Shanghai. Richard has spoken at various conferences about the applications of new technology to risk methodologies.*

## **How To Use Open Source Intelligence**

By eHow Culture & Society Editor Note: This page is no longer active at its original location, however, you can still find it at the wayback machine.

[https://web.archive.org/web/20140102022401/http://www.ehow.com/how\\_2126848\\_use-open-source-intelligence.html](https://web.archive.org/web/20140102022401/http://www.ehow.com/how_2126848_use-open-source-intelligence.html)

Open source intelligence is a process of information gathering from public and overt sources, such as newspapers and military trade journals, that produces "actionable intelligence." Far from being the hobby of amateurs, open source intelligence is used by official military and government intelligence agencies on a regular basis.

1. Gather sources. The number of possible open source intelligence outlets is limitless. Some basic ones are newspapers, which report on things like troop and fleet movement, and even civilians who visit other countries and can make relevant observations upon return. Strategy and defense information websites, such as Jane's Group, also provide high quality information for you to harvest.

2. Pick a region or topic. Monitoring all varieties of open source intelligence across regional and topical interests takes huge amounts of manpower. To effectively use open source intelligence you should focus on one region or issue at a time. This will help you to stay on top of the latest information and will allow you to develop a background understanding of intelligence items.

3. Connect the dots. Once you have gathered your sources you need to monitor news and information in order to connect the dots. Look, for example, at how heads of state visits coincide with arms sales. Then consider troop and fleet movement against rising tensions in various regions. Use widely available technology such as Google Earth, Bing Maps 3D, and others to get views of important locations. Take all this kind of information and try to deduce the most likely intelligence information from it.

4. Test your theories. One of the best ways to test a theory that you've constructed on the basis of open source intelligence is to publish the theory. You can post theories on strategy discussion forums or you can send your piece to influential military bloggers or even newspapers. Check the responses from other members of the open source intelligence community to see what the criticisms might be.

### ***Intelligence Gathering***

Sources: [http://seattletimes.nwsource.com/html/nationworld/2016162814\\_threatwhat10.html](http://seattletimes.nwsource.com/html/nationworld/2016162814_threatwhat10.html)

By The Associated Press

Some questions and answers about the gathering and use of intelligence:

WASHINGTON (AP) — U.S. intelligence in the struggle against terrorism comes in many forms, maddeningly general, improbably precise, a game of sorts with vast consequences for winner and loser.

It's a satellite image showing tribesmen gathering in a remote area where none should be — the photograph so clear you can see the caliber of ammunition they are carrying.

It's a snatched bit of conversation between two terrorist leaders, overheard by a trusted source the terrorists don't realize is listening.

It's a stolen diplomatic cable. That's right, we steal.

Each of these sources and a multitude of others can become the tips that put an entire nation on alert, as a single tip has done from a single source just before the 10th anniversary of the Sept. 11 attacks.

Here are some questions and answers about the gathering and use of intelligence:

Q: What is intel?

A: Simply put, it is information from anywhere that the U.S. can use to its advantage in the world, either in pursuit of its goals or to protect its people. It can be as basic as a diplomat reading a local newspaper and passing on something interesting to a superior in an embassy or Washington. But it gets much more sophisticated and aggressive than that.

In counterterrorism, bits and pieces of information form a messy picture like an impressionist painting. Those collecting the signs and signals look for a pattern, eventually an image, that gives them a target to go after or tells them which target to protect.

Q: What are the main forms of intelligence?

A: Perhaps the spookiest is measurement intelligence, known as "MASINT," using far-away technology to get extremely up close and personal. The U.S. is capable of placing a sensor near a suspected terrorist hideout that can count the number of heartbeats in a room and gauge how fast they're beating. There are even efforts to understand what a "guilty" heartbeat pattern might be.

Masint, working in combination with other kinds of intelligence-gathering, was one of the clinchers in the raid that killed Osama bin Laden. The U.S. measured the approximate height of the tall man who paced beneath the trellis outside the kitchen in a Pakistani compound, to help determine bin Laden was that man.

Then there is human intelligence, or "humint," which has been around since the dawn of spycraft and is still vital. That's the tipster you cultivate and pay, or perhaps the unproven one who simply walks into a U.S. embassy and offers information.

"Sigint," or signals intelligence, monitors or otherwise exploits radio, telephone or satellite phone transmissions. "Imint" is imagery intelligence that includes photographs showing the outlines of a nuclear power plant, obscured in desert sands, or a terrorist training base tucked in a mountainside.

Cybertracking is a newer tool, pursuing terrorists who use computers either to attack a computer network or, more often, to organize how their own human network would launch a physical attack.

Q: What happens to this mountain of raw material?

A: Each of those streams of data is captured by a multibillion-dollar worldwide network of U.S. satellites, armed drones, static blimps and high-flying spy aircraft, manned or unmanned, that suck up so much sound it takes massive computers to crunch all the data and help analysts overwhelmed by the technical information to find meaningful clues.

Sometimes these streams are collected by U.S. operatives — Americans or those in U.S. employ — who go behind enemy lines or into enemy homes, leaving behind the sensors that will provide the data.

True to its name, the Central Intelligence Agency is an "all-source" organization using all means.

Q: How do all these eyes and ears work together?

A: Sometimes they don't. After a Nigerian allegedly tried to bring down a Detroit-bound airliner on Christmas Day almost two years ago, it emerged that his father had warned U.S. diplomats about his son's possible terrorist sympathies, but that tip was lost in the blizzard of counterintelligence.

But in the bin Laden raid, a human source led to the compound in the Pakistani army town of Abbottabad. Signals intelligence monitored for phone calls emanating from there, and found none, because bin Laden forbade them, hoping to evade detection by just such technical means. Masint was derived from the imagery taken by drones and satellites.

All of this helped to convince CIA analysts they had found their man and persuade President Barack Obama to approve a dangerous and diplomatically risky raid into Pakistani sovereign territory.

Q: How is all of this intel sorted through so that the real threats are detected and averted?

A: The ever-present risk is that they won't be. One of the failings of pre-9/11 counterintelligence was that information was jealously guarded by the individual intelligence agencies. Word of a potential plot to fly planes into U.S. landmarks was received by one agency. Another agency had word terrorists might be attending flight school. Each organization kept to itself the dots of information that, when connected, could have revealed the larger pattern of a massive terrorist plot.

Before raw data and human tips can be called "intelligence," they must be analyzed, and if possible, corroborated. The CIA alone has 2,500 people in its Directorate of Intelligence devoted to that task. There are thousands more across the 16 intelligence agencies, sifting raw data, and cross-comparing within their own agencies, and with others, to spot a pattern.

Q: What does it mean to receive — and warn the public about — a credible and specific but unconfirmed threat, as in the latest case?

A: A credible threat means it was heard from a trusted source, not just anyone. Specific means the U.S. has details about when, where or how an attack might unfold. When a threat is specific and credible but unconfirmed, that means intelligence officials haven't been able to validate the information even though they trust the source who gave it to them.

This particular threat is not unusual, but it's being taken so seriously because it comes days before the 10th anniversary of 9/11, a date al-Qaida has eyed for attack.

Q: How is the intel being analyzed in the latest threat?

A: Right now, teams of analysts are combing through information gleaned from one trusted source, who heard that a small group of attackers, perhaps from Pakistan, might blow up a car bomb in New York or Washington. One or all of the attackers might be from Pakistan. Newly minted al-Qaida leader Ayman al-Zawahri might be behind it.

These analysts are looking for anything to corroborate that report in the reams of information they've gathered tracking travelers to the U.S. from Pakistan. U.S. spies overseas will be going back to their sources to see if anyone has heard the same rumor.

Everything unfolds in a hurry.

"You don't have the luxury of vetting the source and then disseminating the information," said Phillip Mudd, a former top counterterrorist official at the CIA and the FBI. "You have to tell everyone what you heard and then try to prove the information is legitimate."

He said he would be directing analysts to pore over everything that can be gleaned from flight and passport logs of potential foreign suspects who have traveled to the U.S.

"Figuring out who would-be attackers are, or even whether they exist, could take months, where the drumbeat of national security wants answers in minutes or days," Mudd said.

Q: What rules do U.S. intelligence-gatherers have to play by?

A: Looser rules than for most people.

The CIA operates under the U.S. law known as Title 50 — literally a license to break laws in foreign countries, by committing espionage, persuading a local official to commit treason, or in extreme circumstances, to go into a foreign country and target an al-Qaida suspect for killing or capture. Title 50 operations are covert, meaning the U.S. never intends to acknowledge them. Other intelligence agencies, such as the eavesdropping National Security Agency and the new Cyber Command, routinely operate under Title 50 as well.

Q: Ultimately, doesn't it all come down to getting lucky — or unlucky?

A: It can feel that way. There is a favorite expression among intelligence officials, memorably if confusingly uttered by former Defense Secretary Donald H. Rumsfeld, that captures the essence of their work:

"As we know, there are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns — the ones we don't know we don't know."

Associated Press writer Eileen Sullivan contributed to this report

**What I Learned in 40 Years of Doing Intelligence Analysis for US Foreign Policymakers**

**Congress as a Consumer of Intelligence Information**

## **OSINT Tools: The Foundation for Social-engineering and Phishing Attacks**

**Marc Bleicher**

Have you ever wondered how someone sitting 7,300 miles away is able to easily penetrate an organization's network? How someone who has never had legitimate access to a network can learn more about that organization than most of its own employees? It's actually pretty easy, given the right skill set and a *lot* of patience. I know cyberwarfare isn't a new thing, but it's still impressive to think that someone on the other side of the globe, a few continents away, is able to wreak so much havoc.

I recently gave a presentation to a group on the topic of open-source intelligence (OSINT). I have given this as a hands-on presentation at conferences and workshops in the past. In those workshops, my audience is usually made up of IT admins, company legal departments, and a handful of individuals from across the law enforcement community. In the weeks leading up to each workshop I always request a list of attendees from the conference sponsor, which I use to gather OSINT on the attendees. On the day of the workshop, before everyone arrives, I go around and put nametags at their seats along with a notecard that is specific for each person. When the session starts, I ask everyone to flip over the notecard and read it – to see if it's accurate. On that notecard is a complete bio and profile comprised of information that I was able to get using various publicly available resources. I try to keep the notecards at a G to PG level, so they usually just include first/last name, DOB/place of birth, maiden names, parents names, kids names, schools attended, address history, phone numbers, job history, associates, affiliations, hobbies, etc. Although this isn't your typical icebreaker, it does set the mood for the day as well as elicit a few awkward stares. But if you've signed up for a class entitled "OSINT and the Internet as an investigative tool" then it's all fair game. Anyway, the point of the exercise is to illustrate to anyone who may have been naïve just how easy it is for someone like me, who doesn't work for a three-letter intel agency, to obtain this level and amount of information.

## What is OSINT?

Open-source intelligence refers to finding and analyzing information from any source that is publicly available. OSINT has been used for decades by the intelligence community. Only in the last 10 to 12 years has there been a methodology change. Prior to the Internet age, OSINT consisted of analyzing newspapers, magazines, radio and TV from across the globe. It wasn't until the Internet was accessible to everyone that OSINT became popular and used by all sectors. As companies evolved and technology advanced so did the competition to be the best in the market. What followed was a variety of companies that started conducting competitive intelligence against one another – or cyberespionage as its known today. During this time, as more companies joined the online community, they began to realize the efficiency of using the Internet as a tool for obtaining "competitive intelligence." It was then discovered that a lot of nation-states were also using OSINT for their own nefarious purposes. We now know that certain nation-states have entire teams devoted to conducting reconnaissance using the Internet to acquire as much intel on U.S. companies, the government and our interests abroad. To put it bluntly, China and Russia figured out long before we did that OSINT was a key to the success of their subsequent hacking operations that have become commonplace over the last decade.

## The Eye-opener

During my presentation last week, I was fortunate enough to have a few C-level executives in the audience. This is always great because I get to show them first hand how easily they can become a target of a phishing email or another social-engineering attack. I started off my presentation with infrastructural reconnaissance, which focuses on gathering information on an organization such as email addresses, DNS records, IP addresses, MX servers, files, and anything else that would be useful to an attacker. Infrastructural recon differs from personal reconnaissance in that personal recon is exactly what it sounds like: gathering info on a person or individual. The two types of recon are all part of the overall objective anyway, especially if you plan to use a social-engineering attack. Before my presentation, I received permission from the executives to use them and the company as the target for my demo. The demo was split into two parts: Part 1 illustrating how much material on them and the company I could uncover using only their domain name. Part 2 was me using the results from Part 1 to obtain additional info that could be used in any number of subsequent attacks.

## Part 1

I used [Maltego](#) to search for the domain. In under a minute the canvas was filled with a striking display of DNS names, domains, MX Records, IP addresses, phone numbers, URLs, email addresses, first and last names, NS Records, locations, documents, and social media affiliations. It's worth mentioning that since Maltego aggregates data from across the Internet and identifies everything that your search term is related to, many results can and will be irrelevant. For example, since this particular company also hosts a blog, there were many email addresses and names associated with user comments on the company blog, which weren't helpful in my objective. Nonetheless, Maltego, as *The Ethical*

*Hacker Network* describes it, is: “an open source intelligence and forensics application that allows for the mining and gathering of information as well as the representation of this information in a meaningful way. Coupled with its graphing libraries, Maltego, allows you to identify key relationships between information and identify previously unknown relationships between them.”

After completing the search using Maltego, I started explaining the results to the audience and zeroed in on one of the several email addresses returned. The email address I chose just happened to belong to an exec sitting in the front row. Now that I had his email address, as well as the naming convention used for their email (e.g., firstname\_lastname@company.com or lastname@company.com), and I had the actual email server, I was more than halfway there. I next logged into LinkedIn using an unassuming account I already created specifically for this type of work and searched for the company. As expected, the LinkedIn search returned a list of people identifying themselves as employees of this company. In that list was a familiar name, it was the same executive and now I had his full name, title, complete description of his position, and a list of his coworkers and information about their positions. Since I only had an hour, I stopped Part 1 and explained how the rest of the process might play out in a real-world malicious scenario with an attacker using this information for a phishing email.

## Part 2

The second part of the demo consisted of me taking a lot of the data I obtained in Part 1 (IP address, domain names, etc.) and enumerating the network. For this I used FOCA 3.2, a free fingerprinting and information-gathering tool that can search for servers, domains, URLs and public documents and which outputs everything into a network tree. Another useful feature of FOCA is it searches for data leaks such as metadata, directory listing, unsecure HTTP methods, robot.txt files, detection and processing of svn repositories, and much more. I think this part of my demo was even more eye-opening because it showed the audience that several of their assets were exposed. Within three minutes I managed to obtain a comprehensive listing of their systems complete with IP net blocks, DNS servers, exchanges server, webmail, Microsoft Lync server, customer-facing portals, and a lot more.

## The End

I barely scratched the surface in this OSINT presentation, but in less than 20 minutes I was able to gather enough information for a mass spear-phishing attack or network intrusion. Along the way I also uncovered information that, although not applicable to this particular objective, could have been useful had I decided to use another attack vector as a way in. For example, I uncovered information about the company's customers, business partners, email communications between employees and prospects, as well as vendors they used.

Like many things, these tools and techniques can be used for good or evil. Unfortunately, most of the time, OSINT is used for malicious behavior. However, as security professionals we can leverage the same TTPs as the bad guys to identify weaknesses before someone exploits them. OSINT can also be very useful for IR and forensics consultants, especially when investigating advanced threats. Having information on the attacker, such as an IP address, C2 servers, moniker, etc., I can then leverage it to my advantage in gathering additional info during forensics. Just like we tell our customers “there is no one right or all-encompassing security solution, but rather a security stack.” Think of OSINT as just another layer in your overall security stack.

## Tactical and Strategic Intelligence

Tactical Intelligence - Intelligence that is required for the planning and conduct of tactical operations. This is in line with military operations being conducted on the battlefield, generally in direct contact with the enemy, the commander's timeframe is very much compressed, and he is dealing with towns, villages, or local tribes. The commander is troubled that an insurgent force may be just over the next hill or hiding in a building waiting to ambush his forces. He is operating in the here-and-now-in-your-face cultural environment. There is no room for error!

Strategic Intelligence - Intelligence that is required for forming policy and military plans at national and international levels. This is in line with more of an expanded timeframe and takes into consideration entire countries. The intelligence analysis may run months or years into the future. During this period, errors, which are not acceptable but do still occur, are not as critical as they are at the tactical level where life and death are daily concerns. Errors at this level can be corrected with the luxury of more room for maneuver.

## ***Components of Strategic Intelligence***

The same analytical process that takes place at the strategic level can be applied at the tactical level. The tactical commander is faced with the same issues albeit at a smaller scale. Policy makers at national level worry about Iranian and North Korean WMDs but the ground commander also worries about insurgent WTDs (weapons of troop destruction) that include but are not limited to RPGs, AKs, IEDs, suicide bombers, etc. Strategic intelligence and tactical intelligence differ primarily in level of application but may also vary in terms and scope of detail.

Information gathered as strategic intelligence may be categorized into eight components. An easy way to remember these components is through the use of the acronym **BEST MAPS**:

### **Components of Strategic Intelligence**

- ⌚ Biographic
- ⌚ Economic
- ⌚ Sociologic
- ⌚ Transportation And Communications
- ⌚ Military Geography
- ⌚ Armed Forces
- ⌚ Political
- ⌚ Scientific And Technical

Each of these components can further be divided into a number of subcomponents. These components and subcomponents are not all-encompassing nor mutually exclusive. This approach is merely a means to enhance familiarization with the types of information included in strategic intelligence.

#### **Biographic Intelligence:**

The study of individuals of actual or potential importance, their background and personalities.

- ⌚ Educational And Occupational History
- ⌚ Individual Accomplishments
- ⌚ Idiosyncrasies And Habits
- ⌚ Position, Influence, And Potential
- ⌚ Attitudes And Hobbies

#### **Economic Intelligence:**

The science of production, distribution, and use of wealth-- the material means of satisfying human desires. economic intelligence is intelligence which deals with the extent and utilization of the natural and human resources and the economic potential of nations.

- ⌚ Economic Warfare
- ⌚ Economic Vulnerability
- ⌚ Manufacturing
- ⌚ Sources Of Economic Capability

#### **Sociological Intelligence:**

The study of society, as well as the groups within society, their composition, organization, purposes and habits, and the role of the individual in relation to social institutions.

- ⌚ Population, Manpower And Labor
- ⌚ Cultural, Physical Characteristics Of People
- ⌚ Public Opinion
- ⌚ Education
- ⌚ Religion
- ⌚ Public Health And Welfare

## Transportation and Telecommunications Intelligence:

### **Transportation Intelligence:**

Concerned with the operation and facilities of transportation systems in foreign countries.

### **Telecommunications Intelligence:**

Concerned with the operation and facilities of civil and fixed military communications systems in foreign countries.

#### **Transportation**

- Railways
- Highways
- Inland Waterways
- Petroleum Pipelines
- Ports
- Merchant Marine
- Aviation

#### **Telecommunications**

- Radio
- Television
- Telephone
- Telegraph
- Submarine Cable
- Related Comms
- Media

### **Military Geography:**

Geography is the science of the description of the land, sea and air, and the distribution of plant and animal life, including man and his industries.

Military geographical intelligence is the military evaluation of all geographical factors which may in any way influence military operations.

- ⌚ Description
- ⌚ Natural Features
- ⌚ Manmade Features
- ⌚ Sub-Component Name
- ⌚ Physical Geography
- ⌚ Human And Cultural Geography

### **Armed Forces Intelligence:**

Is the integrated study of the organized land, sea, and air forces, both actual and potential, of foreign nations.

Strategy: Strategic military problems of the nation in light of position, terrain, economic, political, and other factors.

Tactics: Employment of weapons, employment and operations of the various arms and services, special operations training.

Category: Order of battle - equipment - logistics - organization/administration - military manpower

### **Political Intelligence:**

Political intelligence is intelligence concerning foreign and domestic policies of governments and the activities of political movements.

- ⌚ Basic Principles Of Government/National Policies
- ⌚ Government Structure
- ⌚ Foreign Policy
- ⌚ Political Organizations And Parties
- ⌚ Pressure Groups
- ⌚ Electoral Procedures
- ⌚ Public Order And Safety
- ⌚ Subversion
- ⌚ Intelligence And Security Organization
- ⌚ Propaganda

**Scientific And Technical Intelligence:**

Is the study and evaluation of a foreign countries scientific and technical capability and potential to supports its objective through the development of new weapons and new equipment.

- ⌚ New Weapons And Equipment
- ⌚ Missiles And Space
- ⌚ Nuclear, Biological, And Chemical
- ⌚ Basic And Applied Science

**Overt Collection Responsibilities:**

- ⌚ Dept. Of State: Political, Sociological, Economic, Scientific And Technical.
- ⌚ Dept. Of Defense: Military intelligence information (also scientific/technical and economic pertinent to DoD missions).
- ⌚ CIA: Exploitation of domestic sources of foreign intelligence; monitoring of foreign radio broadcasts

## THE INTELLIGENCE COMMUNITY

### MISSION AND AUTHORITIES OF THE DIRECTOR OF NATIONAL INTELLIGENCE (DNI)

The Director of National Intelligence (DNI) serves as the head of the Intelligence Community (IC), overseeing and directing the implementation of the National Intelligence Program (NIP) and acting as the principal advisor to the President, the National Security Council, and the Homeland Security Council for intelligence matters. Working together with the Principal Deputy DNI (PDDNI) and with the assistance of Mission Managers and four Deputy Directors, the Office of the Director of National Intelligence's goal is to protect and defend American lives and interests through effective intelligence.

## THE INTELLIGENCE CYCLE

Equally important to the components of strategic intelligence is an awareness of the strategic intelligence cycle and the debriefer's role within that cycle. The first step is the identification of intelligence gaps. Analysts translate these gaps into intelligence requirements - the second step. In the third step, the strategic debriefer fulfills those requirements. The fourth step involves preparation of an intelligence report. The fifth and last step is the preparation of an intelligence report evaluation by the originator of the requirement. These evaluations measure the quality of the information as well as the quality of the report writing.

The Intelligence Cycle is the process of developing raw information into finished intelligence for policymakers to use in decisionmaking and action. There are five steps which constitute the Intelligence Cycle.

### 1. Planning and Direction

... is management of the entire effort, from identifying the need for data to delivering an intelligence product to a consumer. It is the beginning and the end of the cycle—the beginning because it involves drawing up specific collection requirements and the end because finished intelligence, which supports policy decisions, generates new requirements.

The whole process depends on guidance from public officials. Policymakers—the President, his aides, the National Security Council, and other major departments and agencies of government—initiate requests for intelligence.

### 2. Collection

... is the gathering of the raw information needed to produce finished intelligence. There are many sources of information, including open sources such as foreign broadcasts, newspapers, periodicals, and books. Open source reporting is integral to CIA's analytical capabilities. There are also secret sources of information. CIA operations officers collect such information from agents abroad and from defectors who provide information obtainable in no other way.

Finally, technical collection—electronics and satellite photography—plays an indispensable role in modern intelligence, such as monitoring arms control agreements and providing direct support to military forces.

### 3. Processing

... involves converting the vast amount of information collected to a form usable by analysts. This is done through a variety of methods including decryption, language translations, and data reduction.

### 4. All-Source Analysis and Production

... is the conversion of basic information into finished intelligence. It includes integrating, evaluating, and analyzing all available data—which is often fragmented and even contradictory—and preparing intelligence products. Analysts, who are subject-matter specialists, consider the information's reliability, validity, and relevance. They integrate data into a coherent whole, put the evaluated information in context, and produce finished intelligence that includes assessments of events and judgments about the implications of the information for the United States.

The CIA devotes the bulk of its resources to providing strategic intelligence to policymakers. It performs this important function by monitoring events, warning decisionmakers about threats to the United States, and forecasting developments. The subjects involved may concern different regions, problems, or personalities in various contexts—political, geographic, economic, military, scientific, or biographic. Current events, capabilities, and future trends are examined.

The CIA produces numerous written reports, which may be brief—one page or less—or lengthy studies. They may involve current intelligence, which is of immediate importance, or long-range assessments. The Agency presents some finished intelligence in oral briefings. The CIA also participates in the drafting and production of National Intelligence Estimates, which reflect the collective judgments of the Intelligence Community.

##### 5. Dissemination

The last step, which logically feeds into the first, is the distribution of the finished intelligence to the consumers, the same policymakers whose needs initiated the intelligence requirements. Finished intelligence is provided daily to the President and key national security advisers. The policymakers, the recipients of finished intelligence, then make decisions based on the information, and these decisions may lead to the levying of more requirements, thus triggering the Intelligence Cycle.

## MiningThe Internet For Intelligence

Internet 2012 in numbers. Source: <http://royal.pingdom.com/2013/01/16/internet-2012-in-numbers/>

There is so much happening on the Internet during a year that it's impossible to capture it all in a blog post, but we're going to give it a shot anyway. How many emails were sent during 2012? How many domains are there? What's the most popular web browser? How many Internet users are there? These are some of the questions we'll answer for you.

To bring you these answers, we've gone to the ends of the web – wherever that is – and back again, and compiled a list of truly fascinating facts about the year that was. Some of the numbers are snapshots taken during the year, others cover the entire period. Either way, they all contribute to giving us a better understanding of Internet in 2012. Enjoy!

### Email

- **2.2 billion** – Number of email users worldwide.
- **144 billion** – Total email traffic per day worldwide.
- **61%** – Share of emails that were considered non-essential.
- **4.3 billion** – Number of email clients worldwide in 2012.
- **35.6%** – Usage share of the most popular email client, which was Mail for iOS.
- **425 million** – Number of active Gmail users globally, making it the leading email provider worldwide.
- **68.8%** – Percentage of all email traffic that was spam.
- **50.76%** – Percentage of all spam that was about pharmaceuticals, the top category of all spam.
- **0.22%** – Share of worldwide emails that comprised some form of phishing attack.

### Web pages, Websites, and Web hosting

- 634 million – **Number of websites (December)**.
- 51 million – **Number of websites added during the year**.
- 43% – **Share of the top 1 million websites that are hosted in the U.S.**
- 48% – **Share of the top 100 blogs that run WordPress**.
- 75% – **Share of the top 10,000 websites that are served by open source software**.
- 87.8 million – **Number of Tumblr blogs**.
- 17.8 billion – **Number of page views for Tumblr**.
- 59.4 million – **Number of WordPress sites around the world**.
- 3.5 billion – **Number of webpages run by WordPress viewed each month**.
- 37 billion – **Number of pageviews for Reddit.com in 2012**.
- 35% – **The average web page became this much larger during 2012**.
- 4% – **The average web page became this much slower to load during 2012**.
- **191 million** – Number of visitors to Google Sites, the number 1 web property in the U.S. in November.

### Web Servers

- **-6.7%** – Decline in the number of Apache websites in 2012.
- **32.4%** – Growth in the number of IIS websites in 2012.
- **36.4%** – Growth in the number of NGINX websites in 2012.
- **15.9%** – Growth in the number of Google websites in 2012.

### Domain Names

- 246 million – **Number of domain name registrations across all top-level domains**.
- 104.9 million – **Number of country code top-level domain name registrations**.
- 329 – **Number of top level domains**.

- 100 million – **Number of .com domain names at the end of 2012.**
- 14.1 million – **Number of .net domain names at the end of 2012.**
- 9.7 million – **Number of .org domain names at the end of 2012.**
- 6.7 million – **Number of .info domain names at the end of 2012.**
- 2.2 million – **Number of .biz domain names at the end of 2012.**
- 32.44% – **Market share for GoDaddy.com, the biggest domain name registrar in the world.**
- \$2.45 million – **The price for Investing.com, the most expensive domain name sold in 2012.**

#### Internet Users

- 2.4 billion – **Number of Internet users worldwide.**
- 1.1 billion – **Number of Internet users in Asia.**
- 519 million – **Number of Internet users in Europe.**
- 274 million – **Number of Internet users in North America.**
- 255 million – **Number of Internet users in Latin America / Caribbean.**
- 167 million – **Number of Internet users in Africa.**
- 90 million – **Number of Internet users in the Middle East.**
- 24.3 million – **Number of Internet users in Oceania / Australia.**
- 565 million – **Number of Internet users in China, more than any other country in the world.**
- 42.1% – **Internet penetration in China.**

#### Social Media

- **85,962** – Number of monthly posts by Facebook Pages in Brazil, making it the most active country on Facebook.
- **1 billion** – Number of monthly active users on Facebook, passed in October.
- **47%** – Percentage of Facebook users that are female.
- **40.5 years** – Average age of a Facebook user.
- **2.7 billion** – Number of likes on Facebook every day.
- **24.3%** – Share of the top 10,000 websites that have Facebook integration.
- **200 million** – Monthly active users on Twitter, passed in December.
- **819,000+** – Number of retweets of Barack Obama's tweet "Four more years", the most retweets ever.
- **327,452** – Number of tweets per minute when Barack Obama was re-elected, the most ever.
- **729,571** – Number of messages per minute when the Chinese microblogging service Sina Weibo saw 2012 finish and 2013 start.
- **9.66 million** – Number of tweets during the opening ceremony of the London 2012 olympics.
- **175 million** – Average number of tweets sent every day throughout 2012.
- **37.3 years** – Average age of a Twitter user.
- **307** – Number of tweets by the average Twitter user.
- **51** – Average number of followers per Twitter user.
- **163 billion** – the number of tweets since Twitter started, passed in July.
- **123** – Number of heads of state that have a Twitter account.
- **187 million** – Number of members on LinkedIn (September).
- **44.2 years** – Average age of a LinkedIn user.
- **135 million** – Number of monthly active users on Google+.
- **5 billion** – How many times per day the +1 button on Google+ is used.
- **20.8%** – Usage share of HootSuite as a social media management tool among the world's top 100 brands.

Web Browsers (see <http://royal.pingdom.com/2013/01/16/internet-2012-in-numbers/>)

#### Search

- 1.2 trillion – **Number of searches on Google in 2012.**
- 67% – **Google's market-leading share of the U.S. search market (December).**

- 1 – **The top trending question of the year on Ask.com: “Will Rob and Kristen get back together?”**

#### Mobile

- **1.1 billion** – Number of global smartphone subscribers.
- **6.7 billion** – Number of mobile subscriptions.
- **5 billion** – Number of mobile phone users.
- **5.3 billion** – Number of mobile handsets.
- **1.3 billion** – Number of smartphones in use worldwide by end of 2012.
- **465 million** – Number of Android smartphones sold in 2012, a 66% market share.
- **31%** – Percentage of the U.S. Internet population that used a tablet or e-reader.
- **13%** – Mobile share of global Internet traffic.
- **5 billion** – Number of mobile broadband subscriptions.
- **1.3 exabytes** – Estimated global mobile data traffic per month in 2012.
- **59%** – Share of global mobile data traffic that was video.
- **500 megabytes** – Amount of monthly data traffic consumed by the average smartphone.
- **504 kbps** – The average mobile network connection speed globally (all handsets).
- **1,820 kbps** – The average mobile network connection speed globally (smartphones).

#### Video

- **14 million** – Number of Vimeo users.
- **200 petabytes** – Amount of video played on Vimeo during 2012.
- **150,648,303** – Number of unique visitors for video to Google Sites, the number one video property (September).
- **1 billion** – PSY's Gangnam Style video became the first online video to reach 1 billion views (currently just over 1.1 billion) and it achieved it in just 5 months.
- **2.7 billion** – Number of views of videos uploaded to YouTube tagged Obama or Romney during the 2012 U.S. election cycle
- **2.5 million** – Number of hours of news-related video that was uploaded to YouTube.
- **8 million** – The number of concurrent viewers of the lifestream of Felix Baumgartner's jump from the edge of space, the most ever on YouTube.
- **4 billion** – Number of hours of video we watched on YouTube per month.
- **60 million** – Number of global viewers monthly on Ustream.
- **16.8 million** – Number of total viewers in a 24 hour period for a video on Ustream, the most ever.
- **181.7 million** – Number of total unique viewers of online video in the U.S. during December.

#### Images

- **7 petabytes** – **How much photo content Facebook added every month.**
- **300 million** – **Number of new photos added every day to Facebook.**
- **5 billion** – **The total number of photos uploaded to Instagram since its start, reached in September 2012.**
- **58** – **Number of photos uploaded every second to Instagram.**
- **1** – **Apple iPhone 4S was the most popular camera on Flickr.**

#### What about the internet in 2013?

Just a couple of weeks into 2013 we don't yet know much about what the year ahead has in store for us. However, we can perhaps make a few predictions: we will be accessing the Internet more with mobile devices, social media will play an increasingly important role in our lives, and we'll rely even more on the Internet both privately as well as professionally.

#### How Much Data is on the Internet and Generated Online Every Minute?

Source: <http://removeandreplace.com/2013/03/13/how-much-data-is-on-the-internet-and-generated-online-every-minute/>

### Have you ever wondered how many bytes of data are created everyday online?

In the last twenty years, internet access has increased across the globe causing a boom in the amount of data being produced and collected.

#### Here are some facts about data on the internet.

There are 277,000 Tweets every minute, Google processes over 2 million search queries every minute, 72 hours of new video are uploaded to YouTube every minute, More than 100 million emails are sent every minute, Facebook processes 350 GB of data every minute and 571 new websites are created every minute.

### Megabytes, Gigabytes, Terabytes... What Are They?

These terms are usually used in the world of computing to describe disk space, or data storage space, and system memory. For instance, just a few years ago we were describing hard drive space using the term Megabytes. Today, Gigabytes is the most common term being used to describe the size of a hard drive. In the not so distant future, Terabyte will be a common term. But what are they? This is where it gets quite confusing because there are at least three accepted definitions of each term.

According to the IBM Dictionary of computing, when used to describe disk storage capacity, a megabyte is 1,000,000 bytes in decimal notation. But when the term megabyte is used for real and virtual storage, and channel volume, 2 to the 20th power or 1,048,576 bytes is the appropriate notation. According to the Microsoft Press Computer Dictionary, a megabyte means either 1,000,000 bytes or 1,048,576 bytes. According to Eric S. Raymond in The New Hacker's Dictionary, a megabyte is always 1,048,576 bytes on the argument that bytes should naturally be computed in powers of two. So which definition do most people conform to?

When referring to a megabyte for disk storage, the hard drive manufacturers use the standard that a megabyte is 1,000,000 bytes. This means that when you buy an 80 Gigabyte Hard drive you will get a total of 80,000,000,000 bytes of available storage. This is where it gets confusing because Windows uses the 1,048,576 byte rule so when you look at the Windows drive properties an 80 Gigabyte drive will report a capacity of 74.56 Gigabytes and a 250 Gigabyte drive will only yield 232 Gigabytes of available storage space. Anybody confused yet? With three accepted definitions, there will always be some confusion so I will try to simplify the definitions a little.

The 1000 can be replaced with 1024 and still be correct using the other acceptable standards. Both of these standards are correct depending on what type of storage you are referring.

### Processor or Virtual Storage

- 1 Bit = Binary Digit
- 8 Bits = 1 Byte
- 1024 Bytes = 1 Kilobyte
- 1024 Kilobytes = 1 Megabyte
- 1024 Megabytes = 1 Gigabyte
- 1024 Gigabytes = 1 Terabyte
- 1024 Terabytes = 1 Petabyte
- 1024 Petabytes = 1 Exabyte
- 1024 Exabytes = 1 Zettabyte
- 1024 Zettabytes = 1 Yottabyte
- 1024 Yottabytes = 1 Brontobyte
- 1024 Brontobytes = 1 Geopbyte

### Disk Storage

- 1 Bit = Binary Digit
- 8 Bits = 1 Byte
- 1000 Bytes = 1 Kilobyte
- 1000 Kilobytes = 1 Megabyte
- 1000 Megabytes = 1 Gigabyte
- 1000 Gigabytes = 1 Terabyte
- 1000 Terabytes = 1 Petabyte
- 1000 Petabytes = 1 Exabyte
- 1000 Exabytes = 1 Zettabyte
- 1000 Zettabytes = 1 Yottabyte
- 1000 Yottabytes = 1 Brontobyte
- 1000 Brontobytes = 1 Geopbyte

This is based on the IBM Dictionary of computing method to describe disk storage - the simplest.

**Source:** <http://www.whatsabyte.com/>

Now let's go into a little more detail.

**Bit:** A Bit is the smallest unit of data that a computer uses. It can be used to represent two states of information, such as Yes or No.

**Byte:** A Byte is equal to 8 Bits. A Byte can represent 256 states of information, for example, numbers or a combination of numbers and letters. 1 Byte could be equal to one character. 10 Bytes could be equal to a word. 100 Bytes would equal an average sentence.

**Kilobyte:** A Kilobyte is approximately 1,000 Bytes, actually 1,024 Bytes depending on which definition is used. 1 Kilobyte would be equal to this paragraph you are reading, whereas 100 Kilobytes would equal an entire page.

**Megabyte:** A Megabyte is approximately 1,000 Kilobytes. In the early days of computing, a Megabyte was considered to be a large amount of data. These days with a 500 Gigabyte hard drive on a computer being common, a Megabyte doesn't seem like much anymore. One of those old 3-1/2 inch floppy disks can hold 1.44 Megabytes or the equivalent of a small book. 100 Megabytes might hold a couple volumes of Encyclopedias. 600 Megabytes is about the amount of data that will fit on a CD-ROM disk.

**Gigabyte:** A Gigabyte is approximately 1,000 Megabytes. A Gigabyte is still a very common term used these days when referring to disk space or drive storage. 1 Gigabyte of data is almost twice the amount of data that a CD-ROM can hold. But it's about one thousand times the capacity of a 3-1/2 floppy disk. 1 Gigabyte could hold the contents of about 10 yards of books on a shelf. 100 Gigabytes could hold the entire library floor of academic journals.

**Terabyte:** A Terabyte is approximately one trillion bytes, or 1,000 Gigabytes. There was a time that I never thought I would see a 1 Terabyte hard drive, now one and two terabyte drives are the normal specs for many new computers. To put it in some perspective, a Terabyte could hold about 3.6 million 300 Kilobyte images or maybe about 300 hours of good quality video. A Terabyte could hold 1,000 copies of the Encyclopedia Britannica. Ten Terabytes could hold the printed collection of the Library of Congress. That's a lot of data.

**Petabyte:** A Petabyte is approximately 1,000 Terabytes or one million Gigabytes. It's hard to visualize what a Petabyte could hold. 1 Petabyte could hold approximately 20 million 4-door filing cabinets full of text. It could hold 500 billion pages of standard printed text. It would take about 500 million floppy disks to store the same amount of data.

**Exabyte:** An Exabyte is approximately 1,000 Petabytes. Another way to look at it is that an Exabyte is approximately one quintillion bytes or one billion Gigabytes. There is not much to compare an Exabyte to. It has been said that 5 Exabytes would be equal to all of the words ever spoken by mankind.

**Zettabyte:** A Zettabyte is approximately 1,000 Exabytes. There is nothing to compare a Zettabyte to but to say that it would take a whole lot of ones and zeroes to fill it up.

**Yottabyte:** A Yottabyte is approximately 1,000 Zettabytes. It would take approximately 11 trillion years to download a Yottabyte file from the Internet using high-power broadband. You can compare it to the World Wide Web as the entire Internet almost takes up about a Yottabyte.

**Brontobyte:** A Brontobyte is (you guessed it) approximately 1,000 Yottabytes. The only thing there is to say about a Brontobyte is that it is a 1 followed by 27 zeroes!

**Geopbyte:** A Geopbyte is about 1000 Brontobytes! Not sure why this term was created. I'm doubting that anyone alive today will ever see a Geopbyte hard drive. One way of looking at a geopbyte is 15267 6504600 2283229 4012496 7031205 376 bytes!

Now you should have a good understanding of megabytes, gigabytes, terabytes and everything in between. Now if we can just figure out what a WhatsAByte is.....:)

The byte converter <http://www.whatsabyte.com/P1/byteconverter.htm>

### ***DATA IS ABUNDANT, INFORMATION IS USEFUL, KNOWLEDGE IS PRECIOUS.***

**Data.** – Data is raw and it's abundant. It simply exists and has no significance beyond its existence . It can exist in any form, usable or not. It does not have meaning of itself. Collecting users activity log will produces data.

**Information.** – Information is data that has been given meaning by way of relational connection.

**Knowledge.** - Knowledge is the appropriate collection of information, such that its intent is to be useful.

Internet users are generating petabytes of data every day. Millions of users access billions of web pages every millisecond, creating hundreds of server logs with every keystroke and mouse click. Having only user log data is not useful. To give better service to user and generate money for business it is required to process raw data and collect information which can be used for providing knowledge to users and advertisers. **Source:** <http://www.whatsabyte.com/>

Based on these figures, I opine that intelligence exists out there just waiting to be tapped. Oh, come on now, you do have search engines to help research that data; it's only 8 zetabytes! Lots of data but guess what, even Google which is considered currently the best search engine, has only indexed about 170 terabytes. Now you know why I recommend using more than one search engine with good keywords to assist.

## **Key Army Access Sites**

NOTE: Several links require password access.

To access Intelink or to apply for a remote access account, go to <https://www.intelink.gov>  
The good thing about Intelink is that you can apply for a non-attributable so that very little electronic footprints are left behind.

**US Army Intelligence Center Mission:**

The United States Army Intelligence Center's mission is Leading, Training, Equipping and Supporting the world's premier corps of Military Intelligence Professionals who are imbued with a warrior spirit, self-discipline and mutual respect.

**The 304th Military Intelligence Battalion's Mission:**

<https://www.ikn.army.mil/apps/iknwms/default.aspx?webId=2166>

The 304th Military Intelligence Battalion's Mission The 304th Military Intelligence Battalion conducts Soldier and Leader training; instilling the Tenets of Leadership, a Warrior Ethos, and the Army Values in order to produce MI professionals who can conduct and lead Military Intelligence operations in an Army or Joint-Interagency-Intergovernmental-Multinational (JIIM) environment. 304th MI BN - Leaders of the Corps! The 304th Military Intelligence Battalion is located in Fort Huachuca, Arizona and is a subordinate unit of the 111th Military Intelligence Brigade.

**Intelligence Knowledge Network (IKN):**

<https://www.ikn.army.mil/>

IKN is a Knowledge Management tool and dynamic portal that enables Intelligence Soldiers all over the world to communicate, collaborate and investigate. IKN serves as the Intelligence Warfighter Forum and hosts discussion forums, a single point of entry to access Intelligence Community websites, and provides a variety of public and private web applications that support the Intelligence Community and the Warfighter.

The Global Terrorism Database (GTD) is an open-source database including information on terrorist events around the world since 1970 (currently updated through 2004). Unlike many other event databases, the GTD includes systematic data on international as well as domestic terrorist incidents that have occurred during this time period and now includes almost 80,000 cases. For each GTD incident, information is available on the date and location of the incident, the weapons used and nature of the target, the number of casualties, and -- when identifiable -- the identity of the perpetrator.

## **Aviation**

Airport & Aviation Security

<http://www.ict.org.il/Articles/tabid/66/ArticleId/1105/currentpage/1/Default.aspx>

Track Planes in Real-Time with Google Maps (we just continue to make it easier for terrorists like Al Qaeda to shoot down an aircraft. Aircraft and airports are very secure and getting inside poses a high degree of risk, however, shooting down an aircraft away from the terminal would make a statement that aviation still is not that safe.)

## ***BLOGS***

By David F. Carr    DOD: Be wary of social media's 'loose lips'

In an earlier era, "loose lips sink ships" was the military's warning not to let even small details about military movements and operations slip in casual conversation. In contrast, social media Web sites today thrive on loose lips, making it even tougher to maintain operational security. Even the smallest details shared on social media sites can play a role in security breaches.

WASHINGTON — Everyone from troops in the field to the highest brass and civilian leaders will be allowed to Twitter, blog and use Facebook and other social networking sites on the military's non-classified computer network, the Pentagon has announced.

The new policy follows a seven-month review in which the Defense Department weighed the threats and benefits of allowing the wide use of emerging Internet capabilities. It essentially seeks to manage the risks while acknowledging the Internet is proving a powerful tool for a myriad of tasks including recruiting, public relations, collaboration with a wide range of people and for communications between troops and their families.

To guard security, it allows commanders to cut off access – on a temporary basis only – if that's required to safeguard a mission or reserve bandwidth for official use. The new directive also makes practices uniform across the entire department, in which different commands previously blocked certain things while others didn't. Visiting sites for pornography, gambling or hate-crime activities is still prohibited on military computers.

"We need to take advantage of these capabilities that are out there – this Web 2.0 phenomena," said David M. Wennergren, deputy assistant secretary of defense for information technology. "The idea is be responsible and use these tools to help get the job done."

The new directive means that YouTube, MySpace and more than a dozen sites blocked by the Pentagon in May 2007 will be unblocked, he said. The Pentagon said at the time that the use of video sites in particular was straining its network and using too much of its bandwidth. But Wennergren said Friday that the move failed to stem the use of bandwidth because people just went to alternate sites.

<http://www.fcw.com/Articles/2009/06/22/Operational-Security-Presentation.aspx>

BLOGS, like social sites, are good sources of information harvesting for intelligence purposes if you have the time and patience, especially the time. Good keyword searching will cut down on the time you spend on BLOGS if your only reason for being there is to harvest information. It is very easy to get distracted though with all the videos that appear daily and you have to be focused on the task. I think that too much information is being passed around. A good analyst, foreign or domestic, can put together enough information from BLOGS to build a good intelligence file. However, I realize that people are not going to shut them down and too many folks out there want access to them.

**World Blogs** (One of the Web's largest and most comprehensive directories of World Blogs, sorted by country and region.)

BLOGS, like social sites, are good sources of information harvesting for intelligence purposes if you have the time and patience, especially the time. Good keyword searching will cut down on the time you spend on BLOGS if your only reason for being there is to harvest information. It is very easy to get distracted though with all the videos that appear daily and you have to be focused on the task. Personally, I think that too much information is being passed around. A good analyst, foreign or domestic, can put together enough information from BLOGS to build a good intelligence file. However, I realize that people are not going to shut them down and too many folks out there want access to them. Be careful how you use them. Once you post information to a Blog it is basically there forever.

Timber bridges in the U.S.

<http://www.tfhrc.gov/pubrds/winter97/p97wi32.htm>

Number Of Bridges In the U.S. (As of October 2004 there are 594,470 highway bridges in the United States. This includes all bridges of 20 foot or greater length that carry roadways open to the public. It does not include railroad bridges.) Source: November 2004 issue of Better Roads. They have been reporting these numbers, broken down by state, annually since 1979.

### Caucasus Analytical Digest (CAD)

The Caucasus Analytical Digest (CAD) analyzes the political, economic, and social situation in the three South Caucasus states of Armenia, Azerbaijan, and Georgia, and assesses the implications for the regional and wider international context. The series is produced by the Center for Security Studies (CSS) at ETH Zurich, the Research Centre for East European Studies at the University of Bremen, the Institute for European, Russian and Eurasian Studies at the George Washington University, and the German Association for East European Studies (DGO). The CAD is supported by a grant from the Academic Swiss Caucasus Net (ASCN). The CAD is edited by Denis Dafflon, Lili Di Puppo, Iris Kempe, Natia Mestvirishvili, Matthias Neumann, Robert Ortung, Jeronim Perović, and Heiko Pleines.

### Russian Analytical Digest (RAD)

The Russian Analytical Digest (RAD) analyzes recent events, trends and developments within contemporary Russian politics, economics and business, foreign policy, security and society. Each issue contains original academic and policy relevant research articles by authors from across the globe, and topical statistical data, graphics and opinion polls. The series is produced by a partner network that includes the Center for Security Studies (CSS) at ETH Zurich, the Research Centre for East European Studies at the University of Bremen, the Institute for European, Russian and Eurasian Studies at the George Washington University, and the German Association for East European Studies (DGO). The RAD is edited by Stephen Aris, Matthias Neumann, Robert Orttung, Jeronim Perović, Heiko Pleines, Hans-Henning Schröder, and Aglaya Snetkov.

### **CAMS Around the World**

*(why would CAMS be included in this handout? Imagine being told you have to deploy to a certain country to conduct an operation. You are told the weather is 40 degrees with a heavy overcast and it is drizzling. You can only imagine an image of what it looks like. However, with a weather cam of the area the image is vivid and in real time. Most major cities around the world have cams showing certain parts of the city which can be very helpful when planning an operation. They can show areas to avoid and roads that support your equipment.)*

## **Country Links/Studies**

National Geospatial Intelligence Agency (Download Country Files) Complete Files of Geographic Names for Geopolitical Areas from GNS (ISO/IEC 10646 [Unicode UTF-8] Compliant as of 18 July 2002).

We provide complete files of geographic names information covering countries or geopolitical areas. The files are not in customary gazetteer format, but are in a special format amenable to input into geographic information systems, databases, and spreadsheets, giving end users powerful capabilities for data analysis, manipulation, and display. They are offered with both names formats provided within each of the files: Reading Order format (Mount Everest) that works well with mapping applications, and Reverse Generics format (Everest, Mount) that works well with gazetteer listings. Follow the links below to learn more and to begin downloading files. Database most recent update - July 01, 2013. <http://earth-info.nga.mil/gns/html/namefiles.htm>

[Click here to Download a single compressed zip file that contains the entire country files dataset](#)  
(Approximately 381MB compressed/1.81GB uncompressed)

## National Geospatial-Intelligence Agency Country Files (GNS)

Database most recent update - March 09, 2015

Database next estimated update - March 30, 2015

We provide complete files of geographic names information covering countries or geopolitical areas. The files are not in customary gazetteer format, but are in a special format amenable to input into geographic information systems, databases, and spreadsheets, giving end users powerful capabilities for data analysis, manipulation, and display. They are offered with both names formats provided within each of the files: Reading Order format (Mount Everest) that works well with mapping applications, and Reverse Generics format (Everest, Mount) that works well with gazetteer listings. Follow the links below to learn more and to begin downloading files.

As of late September 2014, the GeoNames Pre-Positioned Country Files, both the separate and the combined, now include additional breakdown of content by Feature Classification (FC) values. For more information, refer to [September 2014 Prepositioned Country File format](#).

[Download Names Files for Countries and Territories \(FTP\)](#)

[Description of Names Files for Countries and Territories Format](#)

[Click here to download a single compressed zip file that contains the entire country files dataset separated by feature classification](#)

[\(Approximately 446MB compressed/2.08GB uncompressed\)](#)

[Click here to download a single compressed zip file that contains the entire country files dataset \(Approximately 447MB compressed/2.19GB uncompressed\)](#)

[Click here to download a single compressed zip file that contains all the individually zipped country files \(Approximately 887MB compressed/4.16GB uncompressed\)](#)

NationMaster (Welcome to NationMaster, a massive central data source and a handy way to graphically compare nations. NationMaster is a vast compilation of data from such sources as the CIA World Factbook, UN, and OECD. You can generate maps and graphs on all kinds of statistics with ease.) We want to be the web's one-stop resource for country statistics on everything from soldiers to wall plug voltages.

<http://www.nationmaster.com/index.php>

StateMaster (A unique statistical database which allows you to research and compare a multitude of different data on US states. We have compiled information from various primary sources such as the US Census Bureau, the FBI, and the National Center for Educational Statistics. More than just a mere collection of various data, StateMaster goes beyond the numbers to provide you with visualization technology like pie charts, maps, graphs and scatterplots. We also have thousands of map and flag images, state profiles, and correlations.) We have stats on everything from toothless residents to percentage of carpoolers. Our database is increasing all the time, so be sure to check back with us regularly.

## Cultural Intelligence

United States Air Force Culture and Language Center (The Expeditionary Culture Field Guides (ECFGs) are the pocket cultural tool for the deploying service member. ECFG's introduce the 3C knowledge necessary to operate in any environment, and then address the unique cultural features of particular societies. Guides on a variety of countries are available for download through the AFCLC's common access card-enabled website. The guides are intended to complement other existing teaching media, such as the AFCLC's Advanced Distributed Learning Service (ADLS) cultural awareness courseware and the live-actor, immersive Visual Expeditionary Skills Training (VEST) modules.)

Frontline: CyberWar (How real is the threat of war in cyberspace, and what does the White House know that the rest of us don't? FRONTLINE investigates a new war using embedded malicious code, probes and pings, and other weapons aimed directly at America's power grid, water supply, and transportation systems. Examples include The Slammer (Super Bowl Sunday), Nimda (a week after 9/11), Code Red (summer 2001), and Moonlight Maze (from Russia's Academy of Science). View the entire 52 minute program here in six consecutive chapters.)

## ***Databases (Some Searchable) see also [The Deep Web](#)***

I have yet to understand why researchers, even the serious types, tend to avoid databases. They would rather google all day long in the hopes that the sought information will magically appear, and sometimes it does I do have to admit but for the most part it is time not well spent especially if you know your subject and a database can return better results. (The majority of databases have their own internal search engines that will cut down on the time spent searching.) You also have to remember there is no such thing as the perfect search query for any of the search engines.

The National Security Archive

<http://www2.gwu.edu/~nsarchiv/search.html>

Getting sources of Data is always a problem when tackling a statistical or data mining project. Here are two very nice deep web assets: Source: Deep web for Data Mining, <http://deep-web.org/>

Speciality statistical data on all kinds of subjects, from countries GDP to levels of blindness.

## ***Department of Homeland Security***

The Department of Homeland Security Open Source Enterprise (DHS-OSE) has just released two new daily Open Source products to the Homeland Security Central website on Intelink-U (<https://www.intelink.gov/hls>) and the Homeland Security Information Network-Intelligence (<https://hsin-intel.dhs.gov>).

With the large success of the DHS Daily Cyber Report, the DHS-OSE has started reporting open source information on medical and health related hazards, as well as human smuggling and trafficking.

Respectively, these new open source products are titled: DHS Daily Infectious Diseases Report & DHS Daily Human Trafficking Report.

Listed below is a short description of each:

- The DHS Daily Infectious Diseases Report is collected each weekday as a summary of medical and health related hazards published from open-source information concerning the homeland.
- The DHS Daily Human Trafficking Report is collected each weekday as a summary of human smuggling/trafficking related open-source information.

Each of these new products along with the Daily Cyber Report are available for PDF download at the above secure web addresses and are available via unclassified e-mail subscription. There are also several other new open source reports to be released that focus on:

- Drug Trafficking,
- Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE),
- Illicit Commercial Trafficking, and
- Weapons Trafficking

These DHS-OSE open source products originate from Internet sources and open source information. They are unclassified products that can be widely distributed. Point of contact is Tom Link at [thomas.link@dhs.gov](mailto:thomas.link@dhs.gov) or [tom.link@ugov.gov](mailto:tom.link@ugov.gov)

## Drugs and Terrorism, Drug Cartels, And Criminal Organizations

### 2015 Forecast

The Mexican government had notable success targeting the top leadership of various criminal groups in 2014. Several senior bosses from each of the principal regional organized crime camps in Mexico were captured or killed during targeted operations involving federal troops. These successes accelerated the Balkanization of each camp while greatly shifting the balance of power among individual crime groups. The results of the government's efforts in 2014 will lead to a reorganization of each regional camp in 2015, as well as maintaining, if not accelerating, the tempo of the decentralization of organized crime in Mexico. It is likely that Balkanization will lead to new regional camps in 2015 as crime groups in geographic areas formerly controlled by outside crime bosses become entirely independent, focusing on and leveraging their own respective areas.

It should be noted that while each regional camp may experience substantial fragmentation in 2015 and lose control over criminal activities in specific geographic areas — such as the production of illicit drugs, extortion, fuel theft and kidnapping — this will not equate to an overall decline in international drug trafficking. In fact, each regional camp in Mexico will likely continue to expand its respective international drug supply chains to overseas markets such as Europe and Asia, as well as control of operations in South America.

### Organized Crime in Sinaloa State

Sinaloa-based organized crime bore the brunt of targeted government operations in 2014, with the February capture of top Sinaloa Federation leader Joaquin "El Chapo" Guzman Loera in Mazatlan, Sinaloa state, being the highest-profile incident. Each of the major Sinaloa crime groups suffered losses among its senior leadership. On June 23, authorities captured one of the top leaders of the Tijuana cartel, Luis Fernando Arellano Sanchez, in Tijuana. On Oct. 1, the Mexican army captured Hector Beltran Leyva, the leader of the Beltran Leyva Organization, at a restaurant in San Miguel de Allende, Guanajuato state. On Oct. 9, federal troops captured the top leader of the Juarez cartel, Vicente Carrillo Fuentes, in Torreon, Coahuila state.

In addition to these arrests, numerous lieutenants for these leaders and for other high-ranking Sinaloa crime bosses fell at the hands of authorities as well. Interestingly, none of the stated arrests altered the broader trends surrounding each group or triggered internal rifts that would likely have led to substantial escalations in violence, though organizational challenges such as those [experienced by the Sinaloa Federation since 2012](#) were likely magnified. This dynamic suggests that the continued decentralization of each group had lessened the criticality of each major crime boss within his respective organization.

Barring unexpected leadership losses or internal splits within the Tierra Caliente- or Tamaulipas-based crime groups, Sinaloa-based organized crime will likely experience the most fragmentation in 2015. Over the past two years, the Sinaloa Federation has seen its subgroups act increasingly independent from the top-tier leadership, leading to internal wars — independent of the top leadership — among subgroups in areas such as [the Golden Triangle](#) and the surrounding region, as well as the Baja California Peninsula. Similarly, the arrest of Carrillo Fuentes and his key lieutenants in 2014 could trigger leadership changes in 2015 where the remnants of his organization fall under the control of crime bosses based strictly in Chihuahua state. Such fragmentation would mean that new regional criminal camps, likely based in Sonora, Chihuahua or Baja California states, would emerge from the geographic areas currently controlled by the Sinaloa camp.

#### Tamaulipas Organized Crime

The Gulf cartel as it was prior to 2010 no longer exists. Instead, two crime groups — Los Zetas and the Velazquez network — now largely dominate Tamaulipas-based organized crime. The former is now the most widely operating cohesive crime group in Mexico. The crime groups calling themselves the Gulf cartel and operating in areas of Tamaulipas retained by the old Gulf cartel after the 2010 split with Los Zetas are (with the exception of the Velazquez network) in fact a collection of numerous independent groups, all of which operate more like powerful street gangs than the far-reaching transnational criminal organization that was their former parent organization.

Though the rapid expansion of Los Zetas slowed significantly in 2012 as a result of internal feuds, the growing independence of Tierra Caliente-based organized crime and government operations, the group has largely continued to defy the Balkanization experienced by every other crime group in Mexico. This has been largely thanks to a sudden shift in its overall expansion strategy that emerged at the end of 2012, when the cartel began relying more on alliances than violent seizures of territory. Crime groups from other regional camps, such as some of the Beltran Leyva Organization successor groups and the Juarez cartel (and its former enforcer arm, La Linea), have given Los Zetas access to the supply of illicit drugs and to drug trafficking routes in territories held by Sinaloa-based groups. Since the Gulf cartel gangs in Tamaulipas state likely rely on revenues gained from allowing drugs to be trafficked through their territory and are significantly less powerful than Los Zetas, it is likely that at least some of these groups are now cooperating with Los Zetas. Such cooperation could even include the gangs purchasing narcotics from Los Zetas.

Los Zetas' expansion will likely resume in Mexico in 2015, with the presence of Los Zetas operators and activities emerging in the western half of Mexico. Despite this expansion, Los Zetas will not be saved from the Balkanization trend, meaning another significant split could emerge in 2015 — though the exact timing is difficult, if not impossible, to forecast — with portions of Los Zetas competing with one another, either economically or militarily. Though organizational splits do not necessitate violent competition, Los Zetas' extensive network of alliances with other regionally based crime groups, as well as the immense territory directly under the cartel's control, increases the likelihood of any major split triggering violent turf wars. Where violence erupts depends entirely on where the organization splits internally.

### **Drug Smuggling Techniques/Methods**

You can hide drugs up your anus or vagina but a good customs agent will find them if they're suspicious. There are also experts who make a living packing suitcases and rucksacks. It is possible to do it in a way that doesn't show up on x-rays and that feels genuinely like part of the baggage. It's an acquired skill however and the customs boys know exactly what to look for. Another popular method is to buy platform shoes and cut out a space in the heels. This is hardly original but if you decide to try this please at least get used to wearing the things first. You'll look a little conspicuous overbalancing as you walk through the airport.

Cocaine Submarines – Great video by National Geographic on cocaine submarines.

[http://www.documentarytube.com/cocaine-submarines?utm\\_source=feedburner&utm\\_medium=twitter&utm\\_campaign=Feed%3A+DocumentaryTube+%28Documentary+Tube%29](http://www.documentarytube.com/cocaine-submarines?utm_source=feedburner&utm_medium=twitter&utm_campaign=Feed%3A+DocumentaryTube+%28Documentary+Tube%29)

Colombian traffickers are using a new secret weapon smuggling cocaine north – drug submarines.

Up to 30 meters long and almost impossible to detect, are capable of delivering several tons of cocaine in one shipment. Dozens of submarines are believed to be operating between the coasts of Colombia and Mexico, and police estimate that another 70 will be built next year alone. NGC is U.S. Drug Enforcement Agency and the Colombian military agents in search of drug submarine construction in some of the most remote jungles of the planet. Here, where the malaria-infested mosquitoes swarm narco-generals and heavy hand of the local population, there are at least 300

known cocaine laboratories and finished countless drug submarines and their factories. In hard-fought war against drug trafficking, an estimated catch comes in: a surprisingly sophisticated sub built by hand in the jungle.

## Mexico's Drug War: A New Way to Think About Mexican Organized Crime

Read more: [Mexico's Drug War: A New Way to Think About Mexican Organized Crime | Stratfor](#)  
 Follow us: [@stratfor on Twitter](#) | [Stratfor on Facebook](#)

By [Tristan Reed](#)  
 Mexico Security Analyst

Since the emergence of the Guadalajara cartel in the 1980s as one of the country's largest drug trafficking organizations, Mexican organized crime has continued to expand its reach up and down the global supply chains of illicit drugs. Under the Guadalajara cartel and its contemporaries, such as the Gulf cartel, led by Juan García Abrego, a relatively small number of crime bosses controlled Mexico's terrestrial illicit supply chains. Crime bosses such as Miguel Angel "El Padrino" Félix Gallardo, the leader of the Guadalajara cartel, oversaw the bulk of the trafficking operations necessary to push drugs into the United States and received large portions of the revenue generated. By the same token, this facilitated law enforcement's ability to disrupt entire supply chains with a single arrest. Such highly centralized structures ultimately proved unsustainable under consistent and aggressive law enforcement pressure. Thus, as Mexican organized crime has expanded its control over greater shares of the global drug trade, it has simultaneously become more decentralized, as exemplified by an increasing number of organizational splits.

Indeed, the arrest of Félix Gallardo in 1989 and of colleagues such as Rafael Caro Quintero and Ernesto Fonseca Carrillo a few years prior led to the breakdown of the Guadalajara cartel by 1990. Thanks to geographic factors, however, Mexican organized crime was destined to increasingly dominate the global illicit drug trade, soon even eclipsing the role Colombian drug traffickers played in supplying cocaine to the huge and highly lucrative retail markets in the United States. As international law enforcement effectively dismantled the powerful Colombian cartels and stymied their maritime trafficking routes through the Caribbean in the 1980s and 1990s, Mexican crime groups became the cornerstone for any trafficking organization wishing to profit from the high U.S. demand for illicit drugs. Given that the United States's only land border to the south is shared with Mexico, Central and South American organizations had no choice but to cooperate with Mexican crime groups if they wished to transport drugs northward over land and across the nearly 3,200-kilometer (2,000-mile) U.S. border, an area with a centuries-long history of smuggling.

The remnants of the Guadalajara cartel took advantage of the regional geography to expand their own smuggling operations, leading to the creation of seemingly new criminal organizations such as the Juarez cartel (led by the Carrillo Fuentes family), the Tijuana cartel (led by the Arellano Félix family) and what would eventually become known popularly as [the Sinaloa Federation](#) (led by a number of traffickers, most famously Joaquin "El Chapo" Guzman Loera). Operating as autonomous crime syndicates, the fragments of the Guadalajara cartel expanded their respective supply chains and overall share of the illicit drug markets in the United States and overseas. But the

continued [Balkanization of Mexican organized crime](#) that began with the collapse of the Guadalajara cartel would accompany the collective expansion of Mexican crime groups up and down the illicit drug supply chains across the globe.

By 2010, [the criminal landscape in Mexico](#) differed greatly from that in 1989. Numerous crime groups, some with small but critical niches, controlled drug trafficking operations in Mexico. Even so, a few cohesive crime groups still dominated the Mexican drug trade, particularly the Juarez cartel, the Tijuana cartel, the Gulf cartel and the Sinaloa Federation. Each group sought to expand its share over the drug trade, hoping to achieve the pre-eminence of their collective predecessor, leading to violent turf wars. Each group, however, faced internal divisions, leading to further Balkanization in parallel to the turf wars.

2010 marked a rapid acceleration in crime group decentralization, with each of the four dominant groups suffering a series of internal splits. This phenomenon also afflicted their eventual successors, giving rise to the present exceptionally complex map of crime groups. As Stratfor highlighted in its April 2013 cartel quarterly update, the trend of Balkanization will not likely end even if specific crime groups such as Los Zetas momentarily defy it by continuing to expand. Now in 2015, this trend has created an organized criminal landscape where it is no longer sufficient to monitor Mexican organized crime by focusing on individual groups. Instead, one must focus on the regional umbrellas that lead the vast majority of Mexican crime groups. We have therefore had to change the way we think and write about Mexican organized criminal networks, a change made visible in the radical alterations we have made to our popular cartel map.

### The Regions

In 2014, as has been the norm each year since 2010, Mexican organized crime underwent substantial devolution because of continued turf wars and pressure by law enforcement and the Mexican military. The regional challenges and leadership losses the Sinaloa Federation experienced in 2013 continued, particularly with the arrest of [top leader Guzman Loera](#). Along with leadership losses, the lower-tier structures of the Sinaloa Federation — such as the subgroups operating in Chihuahua, Sonora and Baja California states — exercised increasing autonomy from the cartel's remaining top-tier crime bosses. Meanwhile, at the beginning of 2014, the remaining Gulf cartel factions in Tamaulipas state devolved further into numerous gangs. Some cooperated in the same cities, while others waged particularly violent campaigns against one another. In Michoacan state, the Knights Templar were all but dismantled, with Servando "La Tuta" Gomez Martinez the sole remaining founding leader. Numerous crime groups, all based in the same Tierra Caliente region of southwestern Mexico from which the Knights Templar (and the La Familia Michoacana organization it once fell under) emerged, filled the void that opened in Michoacan as a result of the rapid decline of the Knights Templar.

Though continued Balkanization of Mexican organized crime creates an increasingly confusing map, three geographic centers of gravity of cartel activity exist at present: Tamaulipas state, Sinaloa state and the Tierra Caliente region.

With the Mexican organized crime landscape continuing to suffer new fractures, it is marked now by newly independent groups headed by leaders who previously had participated in the same criminal operations as their new rivals. Many of these new crime bosses were born and raised in the same communities — in many cases even sharing family ties — and thus leveraged similar geographic advantages in their rise in power.

The Guadalajara cartel exemplifies this trend. Despite its name, which it received because its leaders had hideouts in the city of Guadalajara, Jalisco state, nearly all of its leaders hailed from Sinaloa state. The cartel also relied on the geography of Sinaloa state to expand its illicit profits, which largely came from the concentration of marijuana and opium poppy cultivation in the Sierra Madre Occidental and from coastal routes for drug trafficking. The city of Guadalajara provided cartel leaders a large cosmopolitan area in which to hide while they rapidly expanded their international operations. When the cartel split, successors such as the Tijuana and Juarez cartels were in fact managed by criminal leaders originating from Sinaloa who continued to leverage some aspect of the state's geography, if they were not in fact still tied to communities there.

Until the early 2000s, Sinaloa-based organized crime dominated the vast majority of organized crime activities in Mexico, particularly drug trafficking routes. Only the Tamaulipas-based Gulf cartel remained as a major independent group, using drug trafficking routes along Mexico's east coast to push drugs into the United States through [Nuevo Laredo, one of the most lucrative trafficking points in Mexico](#). Tamaulipas-based organized crime soon expanded its geographic reach, first via the Gulf cartel and then through Los Zetas, which split from the Gulf cartel in 2010. This trend led to a [seemingly polarized criminal landscape](#) by 2011, with organized crime in Mexico breaking down along a Sinaloa-Tamaulipas divide. By 2012, the Sinaloa- and Tamaulipas-based criminal camps each faced internal divisions, with individual groups in each region beginning to form alliances with groups in the other. Nonetheless, the behavior and evolution of each group was still driven by geography more than any form of ties to groups in the opposing region.

Thus, when Los Zetas split from the Gulf cartel in 2010, despite becoming known as a new or independent crime group, the collective operations and trends of Tamaulipas-based organized crime did not change: The same players were in place managing the same criminal activities. Similarly, the ongoing expansion of Tamaulipas-based organized crime — countering the spread of Sinaloa-based organized crime — did not stop, but instead it continued under Los Zetas' banner. It should be noted that the Gulf cartel, which had been immediately weakened relative to Los Zetas, did in fact ally with the Sinaloa Federation. But even so, with Los Zetas the most powerful Tamaulipas-based crime group, the Sinaloa Federation continued facing immense competition for territory from the east.

Within a given regional criminal camp, alliances and rivalries can form overnight with immediate effects, while crime bosses can quickly switch sides without necessarily causing a shift in operations. For instance, the now-detained Tamaulipas-based crime boss, [Ivan "El Taliban" Velazquez](#), first emerged within the Gulf cartel as a member of Los Zetas, then still a Gulf subgroup. When Los Zetas broke away, Velazquez sided with it. In 2012, however, Velazquez and his faction went to war with then-Los Zetas top leader Miguel "Z-40" Trevino Morales, allied with some Gulf cartel factions and publicly rebranded his network as a part of the Gulf cartel. In Cancun, Quintana Roo state, where the Velazquez network oversaw local criminal activities, Los Zetas members overnight became Gulf cartel members without any preceding conflict.

In 2012, the main Sinaloa- and Tamaulipas-based crime groups suffered from ongoing internal fights and leadership losses at the hands of government troops. After the Velazquez network split from Los Zetas, Mexican marines killed top Zetas leader Heriberto "El Lazca" Lazcano during an operation. Meanwhile, the Sinaloa Federation faced growing challenges in its own northwest dominion from other Sinaloa-based groups such as Los Mazatlecos and a resurgent La Linea, and certain regional crime groups outside Sinaloa state that supported the Sinaloa Federation began fighting one another, including Los Cabrera and Los Dommies in Torreon, Coahuila state. The struggles in both regional crime camps in 2012 permitted the emergence of a third dominant regional camp based in Tierra Caliente, home to groups such as the Knights Templar, the Cartel de Jalisco Nueva Generacion, La Familia Michoacana and Guerreros Unidos.

Tierra Caliente, which means "hot lands," is a rural lowland area surrounded by mountainous terrain that was initially heavily valued by drug traffickers for marijuana cultivation, though for several years now it has produced primarily methamphetamine and heroin. The value of the region for organized crime increased along with the growth of the port of Lazaro Cardenas in Michoacan, making the state a key bridge between Mexico's coast and the interior — and a key port for smuggling narcotics and chemical precursors used in regional drug production.

Most groups in Tierra Caliente originated in the 1990s, when regional organized crime was but an extension of criminal groups based in Sinaloa and Tamaulipas states. In the early 2000s, Sinaloa- and Tamaulipas-based groups, most notably the Sinaloa Federation and the Gulf cartel, began a series of nationwide turf wars that included bids for control over the Tierra Caliente region. Two prominent groups emerged from the wreckage: the Milenio cartel, which operated under Sinaloa Federation crime boss Ignacio "El Nacho" Coronel Villareal, and La Familia Michoacana, which was supported by the Los Zetas branch of the Gulf cartel. (La Familia Michoacana first referred to itself as La Empresa.) The conflict between these groups reverberated throughout the Tierra Caliente region, ushering in other turf wars that continue today.

But the relative weakening of Sinaloa and Tamaulipas organized crime in 2012 enabled Tierra Caliente-based groups to expand — both domestically and internationally — independently as they exploited the substantial geographic advantages of the Tierra Caliente for their criminal operations. Though numerous turf wars between regional groups continued after 2012, as a whole, Tierra Caliente-based organized crime expanded geographically thanks to the efforts of groups such as the Cartel de Jalisco Nueva Generacion and the Knights Templar. Turf wars that emerged or escalated within Tierra Caliente in 2012, most notably the Knights Templar against the Cartel de Jalisco Nueva Generacion and Guerreros Unidos against Los Rojos, have become some of the most violent disputes in Mexico, either directly or indirectly causing the Mexican government's greatest security concerns in 2015.

### 2015 Forecast

The Mexican government had notable success targeting the top leadership of various criminal groups in 2014. Several senior bosses from each of the principal regional organized crime camps in Mexico were captured or killed during targeted operations involving federal troops. These successes accelerated the Balkanization of each camp while greatly shifting the balance of power among individual crime groups. The results of the government's efforts in 2014 will lead to a reorganization of each regional camp in 2015, as well as maintaining, if not accelerating, the tempo of the decentralization of organized crime in Mexico. It is likely that Balkanization will lead to new regional camps in 2015 as crime groups in geographic areas formerly controlled by outside crime bosses become entirely independent, focusing on and leveraging their own respective areas.

It should be noted that while each regional camp may experience substantial fragmentation in 2015 and lose control over criminal activities in specific geographic areas — such as the production of illicit drugs, extortion, fuel theft and kidnapping — this will not equate to an overall decline in international drug trafficking. In fact, each regional camp in Mexico will likely continue to expand its respective international drug supply chains to overseas markets such as Europe and Asia, as well as control of operations in South America.

### Organized Crime in Sinaloa State

Sinaloa-based organized crime bore the brunt of targeted government operations in 2014, with the February capture of top Sinaloa Federation leader Joaquin "El Chapo" Guzman Loera in Mazatlan, Sinaloa state, being the highest-profile incident. Each of the major Sinaloa crime groups suffered losses among its senior leadership. On June 23, authorities captured one of the top leaders of the Tijuana cartel, Luis Fernando Arellano Sanchez, in Tijuana. On Oct. 1, the Mexican army captured Hector Beltran Leyva, the leader of the Beltran Leyva Organization, at a restaurant in San Miguel de Allende, Guanajuato state. On Oct. 9, federal troops captured the top leader of the Juarez cartel, Vicente Carrillo Fuentes, in Torreon, Coahuila state.

In addition to these arrests, numerous lieutenants for these leaders and for other high-ranking Sinaloa crime bosses fell at the hands of authorities as well. Interestingly, none of the stated arrests altered the broader trends surrounding each group or triggered internal rifts that would likely have led to substantial escalations in violence, though organizational challenges such as those [experienced by the Sinaloa Federation since 2012](#) were likely magnified. This dynamic suggests that the continued decentralization of each group had lessened the criticality of each major crime boss within his respective organization.

Barring unexpected leadership losses or internal splits within the Tierra Caliente- or Tamaulipas-based crime groups, Sinaloa-based organized crime will likely experience the most fragmentation in 2015. Over the past two years, the Sinaloa Federation has seen its subgroups act increasingly independent from the top-tier leadership,

leading to internal wars — independent of the top leadership — among subgroups in areas such as [the Golden Triangle](#) and the surrounding region, as well as the Baja California Peninsula. Similarly, the arrest of Carrillo Fuentes and his key lieutenants in 2014 could trigger leadership changes in 2015 where the remnants of his organization fall under the control of crime bosses based strictly in Chihuahua state. Such fragmentation would mean that new regional criminal camps, likely based in Sonora, Chihuahua or Baja California states, would emerge from the geographic areas currently controlled by the Sinaloa camp.

#### Tamaulipas Organized Crime

The Gulf cartel as it was prior to 2010 no longer exists. Instead, two crime groups — Los Zetas and the Velazquez network — now largely dominate Tamaulipas-based organized crime. The former is now the most widely operating cohesive crime group in Mexico. The crime groups calling themselves the Gulf cartel and operating in areas of Tamaulipas retained by the old Gulf cartel after the 2010 split with Los Zetas are (with the exception of the Velazquez network) in fact a collection of numerous independent groups, all of which operate more like powerful street gangs than the far-reaching transnational criminal organization that was their former parent organization.

Though the rapid expansion of Los Zetas slowed significantly in 2012 as a result of internal feuds, the growing independence of Tierra Caliente-based organized crime and government operations, the group has largely continued to defy the Balkanization experienced by every other crime group in Mexico. This has been largely thanks to a sudden shift in its overall expansion strategy that emerged at the end of 2012, when the cartel began relying more on alliances than violent seizures of territory. Crime groups from other regional camps, such as some of the Beltran Leyva Organization successor groups and the Juarez cartel (and its former enforcer arm, La Linea), have given Los Zetas access to supply of illicit drugs and to drug trafficking routes in territories held by Sinaloa-based groups. Since the Gulf cartel gangs in Tamaulipas state likely rely on revenues gained from allowing drugs to be trafficked through their territory and are significantly less powerful than Los Zetas, it is likely that at least some of these groups are now cooperating with Los Zetas. Such cooperation could even include the gangs purchasing narcotics from Los Zetas.

Los Zetas' expansion will likely resume in Mexico in 2015, with the presence of Los Zetas operators and activities emerging in the western half of Mexico. Despite this expansion, Los Zetas will not be saved from the Balkanization trend, meaning another significant split could emerge in 2015 — though the exact timing is difficult, if not impossible, to forecast — with portions of Los Zetas competing with one another, either economically or militarily. Though organizational splits do not necessitate violent competition, Los Zetas' extensive network of alliances with other regionally based crime groups, as well as the immense territory directly under the cartel's control, increases the likelihood of any major split triggering violent turf wars. Where violence erupts depends entirely on where the organization splits internally.

## Foreign Military Studies Office

The Foreign Military Studies Office (FMSO) at Fort Leavenworth, Kansas, is an open source research organization of the U.S. Army. Founded as the Soviet Army Studies Office in 1986, it was an innovative program that brought together military specialists and civilian academics to focus on military and security topics derived from unclassified, foreign media. The results were unclassified articles and papers that provided new understandings and broad access to information from a base of expertise in the U.S. Army, Department of Defense, and foreign and U.S. defense communities and universities.

## Fusion Centers

Fusion Centers Map, Locations, Contact Information    <http://publicintelligence.net/fusion-centers/>  
<https://www.batchgeo.com/map/fusion-centers>  
<http://www.pbs.org/wgbh/pages/frontline/are-we-safer/fusion-centers/>

Gangs (includes gangs in the Military)

By Scott Buhrmaster, PoliceOne Columnist Across the country, gang activity continues to grab headlines, as illustrated in numerous articles posted through PoliceOne recently. In Chicago, for example, it has been reported that officers are battling an influx of several new and violent gangs to the city. The New York Times reported earlier this month that although other types of homicides have fallen across the country, gang-related murders rose a staggering 50 percent from 1999-2002 (the last year statistics were available). Although strong counter-gang efforts by officers in Los Angeles and Chicago (the nation's leading gang center) have effectively sparked a downtrend, LAPD Chief William J. Bratton, however, called gang violence "the emerging monster crime in America," during a speech to a national gang violence conference in Los Angeles this month. USA Today reported that some experts attribute an increase in murders in the first six months of 2003 to an overall resurgence in gang activity in many cities. And it likely comes as no surprise that even rural areas across the country are not immune to gangs. The Charlotte Observer, for example, recently ran a feature article focused on the preemptive counter-gang efforts of law enforcement in a rural North Carolina area where gang affiliation has surfaced. In fact, some remote areas outside larger cities may even attract urban gang members looking for a place to set up shop in an area where police resources may be fewer and, theoretically, awareness of gangs and tactics to suppress them may be lesser. Regardless of where you work, you will likely face the challenge of approaching gang members at some point in your career. For some of you, this may already be a daily occurrence. For others, it may be a less frequent occurrence but nonetheless one you must be tactically prepared for. Here are 10 pointers, presented specifically for patrol officers, to keep in mind when approaching gang members. Although these really just scratch the surface of the myriad gangs contact tips, they do serve as a solid foundation for your next gang contact. They also serve as a reminder that contact with gang members has unique nuances that can make a dramatic difference between well-controlled contact and a free-for-all. The better prepared you are to recognize them, the better prepared you will be to safely navigate street contact with gang members. Stay alert to your surroundings.

Knowing that they attract police attention, gang members standing in a group on the street may hide their weapons in easily accessible, nearby locations instead of on their person. Hiding spots of choice would be those easily overlooked by officers but offering quick access to gang members. Good examples are inside wheel wells of nearby cars, on top of parked car tires, inside a nearby garbage can, under bushes or under a piece of garbage on the ground. Another surrounding threat may be gang members-both friendly and rival-across the street from your contact, secreted in nearby alleys or in vehicles, driving by. To fellow gang members, your contact with their street brothers and sisters may be considered threatening and warrant distractible, perhaps offensive, action. To rival gang members, your contact with their enemies may be seen as an opportunity to attack while the enemy isn't watching - particularly if the attacker is looking to score points for courage (and stupidity) for attacking in police presence. An ideal gang contact will involve three officers: a contact officer making direct contact with the gang members, a primary cover officer spotting the contact officer and a secondary contact officer scanning the surrounding area for threats. Obviously that kind of personnel isn't always available, but when possible, the three-officer approach is preferable. Pay particular attention to underage juveniles.

Knowing that underage juveniles may face lesser weapons possession charges than older members and may be considered less threatening to an approaching officer, gangs may have younger members carry their weapons for them. When approaching gang members, stay keenly alert to the younger members, both for the fact that they may be armed and for the fact that, in an effort to impress older members, they may be more inclined to confront, challenge or act violently towards law enforcement. Pay particular attention to females.

Under the assumption that officers approaching a group of gang members may make the dangerous mistake of disregarding females as less of a tactical risk than males, gang members may have females carry their weapons for them. They may also do so with the thought that male officers without a female partner or a female officer close by may shy away from closely searching a female in the group, particularly if efforts to do so are met with resistance, threats and ridicule. Be prepared to handle females with as much tactical caution and thoroughness as you would with males. Watch out for dogs.

Obviously the presence of a dog should warrant special attention, but be aware that gang members have been known to train dogs to respond to non-verbal attack commands like touching a pant leg, pulling on a shirt or dropping a leash. A dog can be a dangerous, even deadly weapon. Handle its presence at the scene as such. Avoid showing obvious disrespect.

In gang culture, respect is often worth more than gold and can make the difference between life and death. Efforts to degrade, embarrass or show outward disrespect for gang members will likely be met with strong resistance and may incite violence that otherwise could have been avoided. Regardless of your true feelings, try to maintain an air of respect without alluding to weakness, inferiority or lack of control of the situation. A facade of respect will help you maintain control and may yield mutual respect that will prove beneficial at the point of contact and in the future. Do keep in mind, however, that in an arrest situation anything goes. If, for example, a gang member you are arresting asks that you not cuff him until he is out of eyeshot of his associates to avoid embarrassment, this is an obvious no-no. Tactical soundness takes priority over all other considerations. Don't overreact.

"Overreacting tends to make officers appear to be someone who shows fear," says PoliceOne gang expert and P1 Discussion Board moderator Bob Walker. "Gang members refer to this type of officer as 'scary'--someone who shows fear and over reacts." Fear alludes to vulnerability and lack of control, which may increase the chances that combative members may confront you. However, be sure that in your effort to avoid overreacting you don't

UNDERreact. Remain in control of yourself and the situation while responding with the appropriate level of action. Know your jargon and your facts...or don't use them.

One of the quickest ways to lose respect and credibility and to put yourself in danger when dealing with gang members is to show signs of ignorance to gang jargon and culture. Although communicating with gang bangers on a colloquial level may facilitate better communication, deeper respect, and may yield more information, if you're not up to date on all the current street terms, don't use them. The same holds true with gang-related facts. If you're not sure of what you're saying, don't say it. In the world of gangs and law enforcement, ignorance is not bliss, it's dangerous. "Most street officers who are not specifically assigned to gang units are dealing with all kinds of different people and occurrences," says Walker "They don't have the convenience of dedicating time to learning lots of gang slang and then staying updated on changes. "Once you start using slang, you're opening the door to the rest of your conversation being conducted in slang. If you're not fully confident of your ability to speak gang language, it's better to use no slang at all than to toss out a few terms in an effort to be cool, and then find yourself coming up short later in the conversation." Walk the walk.

Never threaten anything that you can't or won't follow through on. If you say you're going to respond in a certain way if your questions aren't answered, do it. If you say action will be taken if certain behavior isn't immediately terminated, take it. And on the flip side, if you promise something that you can in fact provide in response to cooperation, follow through on your "agreement." Another quick way to lose credibility and diminish the odds of future cooperation is to make shallow threats and meaningless promises. Pay close attention to clothing.

Some gang wear is conducive to effectively hiding weapons. Things like baggy pants with deep pockets, oversized shirts, thick coats, and ball caps lend themselves well to secreting a variety of weapons including, of course, guns. Pay very close attention to the movements of gang bangers who may be wearing clothes that are especially good for hiding weapons. Also remember to search very thoroughly and cautiously when that level of contact is warranted. Use 'interest' as a means of gathering intelligence.

You may be surprised at how much can be learned just by asking with interest and waiting for an answer. Whenever possible, ask gang members questions that may yield valuable intelligence information without a demanding or overbearing tone. Ask about things like leadership, new gang members, upcoming activities, problems with rival gangs, shifts in territory...anything and everything that may prove helpful to anti-gang efforts. Be sure to take notes when reasonable and be sure to share the intelligence with your command staff, fellow officers and your gang unit.

## Gang News

Signs and Symbols of Cults, Gangs, and Secret Societies (Signs, symbols, emblems, flags or insignia of groups under which they organize themselves successfully and who insist on bringing their own world-systems into the existing order(s) on a local and/or global scale, often under the threat of severe sanctions from the state or government.)

### Source:

<http://www.accuracyproject.org/GangAcronyms-US.html>

**AB - Aryan Brotherhood** -- A white supremacist prison/street gang founded in the 1960s in California. 666 is another tag associated with this Caucasian gang.

**ABC - Altadena Blocc Crips** -- A predominantly African-American street gang based in the San Gabriel Valley of Southern California. Their name is occasionally spelled "Altadena Bloc Crips" or "Altadena Block Crips."

**ABC - Asian Boy Crips** -- An Asian-American street gang founded in Minnesota.

**ABCC - Acacia Blocc Compton Crips** -- An African-American street gang that originated in Compton, California.

**ABT - Aryan Brotherhood of Texas** -- A white supremacist prison/street gang founded in Texas in the 1980s.

**ABZ - Asian Boyz** -- An Asian-American street gang that originated in Southern California, then later spread to a number

of cities across the country. They have grown to become one of America's largest Asian street gangs. Many of the ABZ sets are comprised primarily of Cambodian-Americans. AB, ABS, and 1 2 26 (1 = A, 2 = B, 26 = Z) are a few of the other tags associated with this gang. Their colors include black, yellow, and green. A tattoo of a dragon wrapped around the letter "A" can occasionally be found on its members. Tiny Rascal Gangsters (TRG), and Wah Ching have been rivals of this gang.

**AC - Aryan Circle** -- A white supremacist street/prison gang that has spread to dozens of states throughout the country.

**ACB - Asian Crip Boys** -- An Asian-American street gang found in multiple locations, including—but not limited to—California, Washington, Illinois, Georgia, and North Carolina.

**ACG - Asian Crip Girls** -- An Asian-American street gang. In Minnesota, this gang is predominantly Hmong.

**ADCC - Atlantic Drive Compton Crips** -- A Southern California street gang found south of Los Angeles in Compton.

**ADL - Altadena Denver Lanes** -- A Southern California street gang found in the San Gabriel Valley. This Bloods' gang is comprised primarily of African-Americans. Red has been their chosen color.

**AFO - Arellano-Felix Organization** -- A major North American drug trafficking cartel that is also known as the Tijuana Cartel.

**AGC - Avalon Gangsta Crips** -- An African-American street gang founded in Los Angeles, California.

**AIB - Asian Insane Boys** -- An Asian-American street gang in Southern California.

**AIGN - Almighty Imperial Gangster Nation** -- An African-American street gang. IG and AIG are a couple of other tags associated with this gang.

**AKA - Asian Kick Ass** -- An Asian-American street gang in Southern California. They've arguably been most active in the San Gabriel Valley, east of Los Angeles, California.

AKB - Asian Killa Boyz -- A Southern California street gang based in the San Gabriel Valley.

AKP - Asian King Posse -- A predominantly Hmong street gang in the Midwest. They've arguably been most active in Detroit, Michigan, Minneapolis/St. Paul, Minnesota and Wisconsin. 116 is another tag associated with this Asian-American gang.

ALK - Almighty Latin Kings -- Founded in Chicago, Illinois, they are one of the largest Hispanic gangs in the United States. They're also known as the Latin Kings (LK), Almighty Latin King Nation (ALKN), and Almighty Latin King and Queen Nation (ALKQN).

ALKN - Almighty Latin King Nation (See above ALK entry)

ALKQN - Almighty Latin King and Queen Nation (See above ALK entry)

ANO - Aryan Nation Outlaws -- A white supremacist gang that was reportedly founded by members of the Aryan Brotherhood of Texas.

AOA - American Outlaws Association -- A motorcycle gang also known as the Outlaws Motorcycle Club and Outlaws Nation.

AP - Armenian Power -- An Armenian street gang most active in Hollywood, Glendale, the eastern San Fernando Valley, and western San Gabriel Valley of Southern California. AP 13, AP X3, and AP XIII are a few of the other tags associated with this gang.

AP - Avenue Pirus -- A Southern California street gang that is occasionally known as Avenue Piru Gang (APG).

APB - Athens Park Boys -- A street gang that originated in Los Angeles, California. They later popped up in a few other locations across the country.

APO - Asian Pride Only -- An Asian-American street gang most active in California and Oregon.

AS - Aryan Soldiers -- A white supremacist street/prison gang.

ASW - Asian Street Walkers -- An Asian-American street gang that is occasionally known as Asian Street Warriors. They've been active in Utah, Idaho, and especially Stockton, California. Many of their members have been of Cambodian ancestry.

A13 - Azusa 13 -- A predominantly Hispanic street gang in Southern California. The gang (also known as Varrio Azusa 13, and Varrio Azusa 13 Rifa) can be found in the San Gabriel Valley community of Azusa, in Los Angeles County. This Mexican Mafia affiliated gang has been accused of engaging in a campaign of violence and harassment to drive African-Americans out of the city of Azusa as well as prevent

blacks from moving into the SGV city. In addition to the aforementioned hate crimes, a 2011 federal indictment also showed they sought to monopolize the market for illegal drugs in Azusa, California.

ATC - Anaheim Travelers City -- An Anaheim, California street gang. SouthSide Krooks (SSK) has been a rival of this Southern California gang. ATC LM (Anaheim Travelers City Los Malos) is another tag associated with this gang.

AV - Ashland Vikings -- A predominantly Hispanic street gang based in Chicago, Illinois. AVs and AVN (Ashland Vikings Nation) are a couple of other tags associated with this gang. Their rivals include--but are not limited to--La Raza, Harrison Gents, Playboys, and Maniac Latin Disciples.

Aves - The Avenues -- A Mexican-American street/prison gang that has been most active in northeastern Los Angeles, California. Their turf has included Highland Park, Glassell Park, as well as sections of Cypress Park, and Eagle Rock. Founded in the 1950s, the gang (also known as Avenidas) was named for the avenues in northeast L.A. that cross Figueroa. They're very closely associated with the Mexican Mafia (La Eme). Members of the Avenues have been convicted of committing hate crimes aimed at driving black residents out of the predominantly Latino neighborhoods of northeastern Los Angeles. Highland Park (HLP) has been a rival of this gang. The use of an apostrophe (Ave's) occasionally appears in tagging. A tattoo of a skull wearing a fedora is commonly found on many of its members. Cliques include Drew Street, Cypress Aves, Division Street (DVST), 43rd Aves, Avenues 57, etc.

BA - Barrio Azteca -- Founded in the 1980s, Barrio Azteca is a Mexican-American street/prison gang and drug cartel that has been most active in the Southwestern United States.

BA - Brown Authority -- A predominantly Hispanic street gang in Pico Rivera, California. Pico Viejo has been a rival of this Los Angeles County gang.

BB - Border Brothers -- A predominantly Hispanic prison/street gang that has been most active in California and Arizona. Although they are primarily known as a prison gang, they have increasingly been establishing a presence on the streets. 22 and XXII are a couple of another tags associated with the Border Bros. (The number 2 represents the letter "B" -- thus, 22 = BB.) Some cliques claim black as their gang color.

BBH - Brown Brotherhood -- A predominantly Hispanic street gang that has arguably been most active in the California cities of Vallejo (in Solano County) and Whittier (in Los Angeles County). BBH 13 and BBHX3 are a couple of another tags associated with this gang.

BCR - Brown Crowd Raza -- A Sureno

street gang found in the vicinity of Portland, Oregon.

BD - Black Disciples -- An African-American street gang founded in Chicago. They are also known as the Almighty Black Disciple Nation (ABDN).

BD - Black Dragons -- An Asian-American street gang and organized crime syndicate that was founded in the 1980s. They've been most active in Monterey Park and Rosemead in the San Gabriel Valley, and Los Angeles, California. Many of their members have been ethnic Chinese from Vietnam. VB - Viet Boys -- An Asian-American street gang found in the vicinity of Seattle, Washington.

VBZ - Viet Boyz -- An Asian-American street gang that originated in Southern California.

VC - Varrio Catorce -- A street gang found in California, Oregon and Washington. 14, XIV, X4, VC 14, VC XIV, and VC X4 are a few of the tags associated with this gang.

VC - Varrio Centro -- A predominantly Mexican-American street gang that has been most active in the vicinity of Fort Worth, Texas.

VCFO - Vicente Carrillo-Fuentes Organization -- A major North American drug trafficking cartel.

VDH - Varrio Diamond Hill -- A street gang that has been most active in Fort Worth, Texas. Varrio North Side (VNS) has been a key rival.

VDM - Very Dangerous Mexicans -- A Mexican-American street gang found in North Carolina.

VF - Volksfront -- A white supremacist street/prison gang founded in 1994. Although Volksfront chapters exist across the United States, as well as several foreign countries, they have arguably been most active in Portland, Oregon, and Missouri. Their colors include red, white and black. WP (White Power), ROA (Race Over All), and the swastika are a few of the other tags associated with this neo-Nazi group.

VFL - Varrio Fallbrook Locos -- A predominantly Mexican-American street gang in Fallbrook, California. VFL 13 is another tag associated with this Southern California gang.

VHG - Varrio Hawaiian Gardens -- A predominantly Hispanic street gang based in Hawaiian Gardens, California. VHG has roots dating back to the mid-20th century. Members of this Southern California gang have been known to take pride in their racism and mission to rid Hawaii

Gardens of all African-American residents through a campaign of violence and intimidation. Some members have even admitted VHG is a "Hate Gang."

VHK - Vamphill Kings -- A Boston, Massachusetts street gang. Vamp Hill gang colors include black and white, and also black and silver.

VL - Vatos Locos -- A street gang active in California, Oregon, Washington, North Carolina, Georgia, Washington, D.C. and several other locations across the country. VLS and VL X3 are a couple of other tags occasionally associated with this gang.

VL - Vice Lords -- A large, predominantly African-American gang street/prison founded in Chicago in the mid-20th century. Although they now have a nationwide presence, they're most active in the Midwest. In spite of the fact they are often recognized primarily as a black gang, there have been documented cases of both Caucasian and Hispanic Vice Lords' members. They have also been known as the Vice Lord Nation (VLN), Almighty Vice Lord Nation (AVLN), and Conservative Vice Lord Nation (CVLN). 312, which is Chicago's area code, is a common tattoo found on members of the Vice Lords. Their colors include gold, black and red.

VLA - Varrio Los Avenues -- A predominantly Hispanic street gang in Yuma, Arizona.

VLM - Vatos Locos Mexicanos -- A North American street gang comprised primarily of Hispanics.

VLT - Varrio Loco Town -- A predominantly Mexican-American street gang in Salt Lake City, Utah.

VM - Vietnamese Mafia -- An Asian-American street gang.

VMH - Varrio Madison Heights -- A Maricopa County, Arizona street gang.

VML - Varrio Mesa Locos -- A predominantly Hispanic street gang based in Oceanside, California. ML, 13 12 (13 represents the letter "M" and 12 represents the letter "L"), VMLS, and MESA are a few of the other tags associated with this San Diego County gang.

VNE - Varrio Nuevo Estrada -- A Mexican-American street gang founded in East Los Angeles, California. Their sphere of influence has since spread to other Southern California communities.

VNS - Varrio North Side -- A predominantly Mexican-American street gang that has arguably been most active in California, Texas, and Washington. In Fort Worth, Texas, Varrio Diamond Hill (VDH) has been one of their key rivals.

VPG - Viet Pride Gangsters -- An Asian-American street gang occasionally known as Viet Pride Gang or Viet Pride Gangstas.

VPL - Varrio Posole Locos -- A predominantly Hispanic street gang based in Oceanside, California. P, PT, VP, VPL, VPLS, Posole, Posoles, M, Eme, Varrio Posole, Posole Town, 13, 16, 16 20, 22, 22 16, 22 16 12, and 22 16 12 19 are a few of the other tags associated with this San Diego County gang.

VPR - Varrio Pasadena Rifa -- A predominantly Hispanic street gang found in Pasadena, California. Both South Side Pasadena, and North Side Pasadena have been rivals of this Los Angeles County gang.

VSJ - Varrio San Jose -- A predominantly Hispanic street gang based in San Jose, California.

VSLC - Venice Shoreline Crips -- An African-American street gang found in Venice, California. VSC is occasionally offered as an acronym for this Crips' set.

VSM - Varrio San Marcos -- A predominantly Hispanic street gang based in San Marcos, California. They're also known as Wolfpack, Lobo Town, and Ghost Town. VSM, SM, WP, WPLS, GT, 19 13 (19 represents the letter "S" and 13 represents the letter "M"), 23 16 (23 represents the letter "W" and 16 represents the letter "P"), and 7 20 (7 represents the letter "G" and 20 represents the letter "T") are a few of the other tags associated with this San Diego County gang.

VSV - Varrio Simi Valley -- A street gang in Ventura County, California. Organized in the 1980s, this gang was initially comprised of Mexican-Americans, though some Caucasian members have been documented. They've been most active in Simi Valley and Moorpark. Moorpark Locos (MPLS) has been a rival of this gang.

VVR - Varrio Vista Rifa -- A predominantly Hispanic street gang in Los Angeles, California. VVR X3 is another tag associated with this gang.

WB - The Wonder Boys -- A Mexican-American street gang in the Yuma, Arizona area. They are also known as Los Wonder Boys, or Wonder Bois.

WBP - Wetback Power -- A Mexican-American street gang.

WCMP - West Covina Mob Piru -- A Southern California street gang based in the San Gabriel Valley community of West Covina.

WF13 - White Fence 13 -- A Mexican-American street gang founded in East Los Angeles, California.

WK - White Knights -- A white supremacist street/prison gang founded in the Texas prison system in 1991.

WNS - Winos -- A predominantly Hispanic street gang. They have arguably been most active in California, Oregon and Washington. They are not only an

independent street gang located in several cities across the country, but also a subset (younger members, typically) of several other gangs.

WSBP - West Side Brown Pride -- A predominantly Mexican-American street gang found in the American Southwest. Although they are found in several locations, they are most active in Phoenix, Arizona. WSBP13 and WSBPXIII are a couple of other tags associated with this gang.

WSBPL - West Side Brown Pride Locos -- A predominantly Mexican-American street gang found in Tucson, Arizona.

WSC - West Side Crips -- An African-American street gang.

WS18 - Westside 18th Street -- A Sureno gang found in the vicinity of Portland, Oregon. XVIII, X8 and XV3 are a few of the tags associated with this gang.

WS18TWS - Westside 18th Street Tiny Winos -- A Sureno street gang found in the vicinity of Portland, Oregon.

WSI - West Side Islanders -- A street gang comprised primarily of Pacific Islanders. They have been found in California, Oregon, Washington, and on the island of Oahu in Hawai'i. They have arguably been most active in Honolulu, Hawai'i, and Long Beach, California.

WSL - Westside Locos -- A predominantly Hispanic street gang found in numerous locations from coast to coast. They are arguably most active in California, Florida, and Georgia. WSL 13, WSL X3 and WSL XIII are a few of the other tags associated with this gang. Be aware that some WSL sets claim an alliance with the Nortenos, while others are allied with the Surenos.

WSM - West Side Mesa -- An Arizona street gang comprised primarily of Hispanics.

WSP - West Side Pomona -- A predominantly Hispanic street gang that originated in Pomona, California. WSP 13, WSP X3 and WSP XIII are a few of the other tags associated with this gang.

WSV - West Side Verdugo -- A Southern California street gang, also known as the Mount Vernon Gang (MVG).

WSW - Westside Wilmas -- A predominantly Hispanic street gang found in the South Bay area of Los Angeles. They've been most active in Wilmington and Long Beach, California. Eastside Wilmas (ESW) has been one of their rivals.

WTX - West Texas Tangos -- A predominantly Hispanic street/prison gang.

WVL - Whittier Varrio Locos -- A predominantly Hispanic street gang found

in the Whittier area, southeast of Los Angeles, California.

WVN - Watson Varrio Norte -- A Santa Cruz County, California street gang found in the Watsonville area.

YCT - Young Crazy Thugs -- A Southern California street gang that is occasionally spelled "Young Crazy Thugz."

YOG - Young Oriental Gangsters -- An Asian-American gang.

YOH - Youth of Hitler -- A white supremacist skinhead gang found in Portland, and Milwaukie, which is located southeast of Portland, Oregon.

YOT - Young Oriental Troop -- An Asian-American street gang found in the vicinity of Seattle, Washington.

YTK - Young Terrible Kids -- A street gang found in Hawaii.

YTL - Young 20 Locs -- A predominantly African-American street gang found in Long Beach, California. They are a subset and younger generation of the Rollin' 20 Crips (RTC). Their chosen colors are black and yellow, and members often wear Pittsburgh Steelers apparel.

ZP - Zoe Pound -- A predominantly Haitian gang found in Florida, as well as other locations.

### Interpreting Gangster Clothing

<http://www.policemag.com/Channel/Gangs/PhotoGallery/2010/02/Gangster-Clothing.aspx>

Gangs in The Military (According to the FBI, 15,000 men and women in the U.S. military have ties to notorious American gangs such as MS-13, the Crips, the Bloods, and the Gangster Disciples.)

<http://www.policemag.com/Videos/Channel/Gangs/2011/01/Gangs-In-the-Military-Part-1.aspx>

Gang tattoos are an excellent tool for law enforcement and corrections officers to use to identify known or suspected gang members. This gallery includes examples of tattoos worn by predominantly Hispanic gangs such as the Mexican Mafia, MS-13, and the Latin Kings. The number "13" is used because M (or La Eme) is the thirteenth letter of the alphabet and is used to signify the Mexican Mafia, which uses Sureños—gangs that swear allegiance to the Mexican Mafia—to carry out its orders from prison. <http://www.policemag.com/Channel/Gangs/PhotoGallery/2009/08/Gang-Tattoos-Hispanic.aspx>

Flixxy		<a href="http://www.flixxy.com/">http://www.flixxy.com/</a>

[Zoomr](#) : Recent startup that is shaping up to take on Flickr. Have just announced they will be increasing monthly limits on free and paid accounts to more than what Flickr offers.

[Vmix](#) : Founded by the people behind MP3.com, Vmix offers photo and video sharing along with the ability to create your own slideshows. A busy-looking site that seems to have quite a bit of traffic.

[Flickr](#) : The daddy of photo-sharing sites, the first in the breed of web 2.0 photo sites, allows you to create galleries, tag photos etc. The biggest in terms of traffic and was acquired by Yahoo.

[Fotki](#) : Founded in 1998 Fotki has been around for ages in relation to a lot on this list, it offers a range of services such as photo-sharing, photo-printing, photo-selling and blogging.

[Fotolog](#) : Large photo blogging community - claims to have a staggering 1.5 billion page views and receive over 20 million unique visitors per month which is backed up by its alexa ranking of [33](#).

[Fotopic](#) : Another site that has been around a few years; since 1999. Offers gallery services and also prints and your photos on to various gifts within their store.

[Glowfoto](#) : A basic photo sharing site that offers galleries and the option to upload via mobile phone. 25million photos have been uploaded by 73k users so far.

[DotPhoto](#) replaced [MyPhotoAlbum](#) : Photo sharing with the usual features and also offers printing; currently offering 15 free prints to new users. Has had 32million photos uploaded so far.

[Panoramio](#) : Photo storage and a mapping feature via a mashup with google maps. Each photo gets linked with the place it was taken. 2GB storage included for free.

[Zoomonga](#) : A nice-looking site but the rather stingy 20mb of uploads per month on the free plan could be why it doesn't look exactly busy.

[Webshots](#) : Another huge site owned by Cnet. Provides the usual photo sharing features plus a desktop utility for organising photos, prints on gifts etc.

[Photobucket](#) : The favourite of myspace users, provides free and paid accounts for image hosting and video hosting along with the ability to create a flash slideshow. Have harnessed viral marketing to a tee and provide most of the image hosting for myspace and other social networks.

[PBase](#) : Not the easiest on the eye but seems to have gained huge traffic since it was established in 1999. Very basic features and a huge member's forum.

[OrangePics](#) : A basic site that emphasizes ease of use and safety of your photos. Currently offering your first full year for free, after which is an annual charge of \$24.95.

[Phanfare](#) : Offers unlimited storage for a monthly fee of \$6.95 to host your photos and video clips. Also provides downloadable organisation software.

[SmugMug](#) : Really nicely designed site that offers accounts from \$59.95 per year with a free trial. The user galleries are nice to look at and you can include video in these.

[Dropshtots](#) : Front end looks nice and clean and the features are up to scratch but viewing the sample gallery lets the site down - cluttered and ugly.

[Slide](#) : Another site that has taken advantage of myspace to create viral marketing. Users upload photos and create slideshows using the editor and then post them to their profile or blog etc. Controls are nice and easy to use, will do well unless myspace bring out their own slideshow tools.

[Photosite](#) : Provides photo sharing but you get the impression the site is more about selling prints and gifts than that. Looks a touch too corporate although the drag and drop tools sound impressive.

[23HQ](#) : Nice site which provides completely free accounts, basic features such as galleries, tagging and photogroups; where you can form your own community of friends and chat and share each other's photos.

[Kodak Gallery](#) : Goes under the name of a photo sharing site but looks very corporate and set up to flog merchandise rather than provide a nice website experience.

[Zoto](#) : Nice site with good features such as geo-tagging, photo blogging and the usual community features such as browsing by interest. Free version with the option to upgrade to a pro account for \$24.95 per year.

[Snapfish](#) : Another corporate site run by Hewlett Packard, offers photo sharing and digital prints of your snaps.

[Flukiest](#) : Photo, Video and music sharing with the ability to upload via mobile phone or a personalised Flukiest email address.

[Imagestation](#) : Sonys photo sharing offering, much better looking the Kodaks or HPs. Usual features with printing options but also the ability to upload via your psp.

[PictureTrail](#) : Another site that is combining photo sharing and social networking. Provides myspace style customisable profiles and some nice flash widgets to create 3d cubes of your photos, heart shapes, slideshows, screensavers and loads more bits and bobs.

[Hello](#) : Great domain and Googles offering which is designed to work in tandem with their [picasa](#) image organising software which they acquired. Picasa is great piece of software and helps you find pictures you had long forgotten about. It seems that hello allows you to send images to your friends like and instant messenger or to your blogger blog.

[Parazz](#) : Parazz is a nifty looking site which offers drag and drop uploading, slideshow creation with the option to add a soundtrack, camera phone uploads and a colour theme editor. They provide a free version or pro version for \$29 a year.

[Zeec](#) : Clean looking site with nice user galleries, offers the choice of uploading via your pc or mac with their software or via mobile phone.

## ***Improvised Explosive Devices***

### ***Including Explosively Formed Projectiles/Improvised Rocket Assisted Mortars***

Potential Indicators of Explosives Manufacturing. In general, almost every home-made explosives manufacturing process affects the immediate environment. Individuals using concentrated hydrogen peroxide also might exhibit white-colored peroxide burns on skin that has come in direct contact with these types of substances. Some indicators that may point to homemade explosives production include the following:

Individuals who have burn marks on their hands, arms, or face, or who have stains on clothing.

Large industrial fans or multiple fans in windows.  
Dead vegetation in the surrounding area.

Foul odors or caustic fumes coming from a room or building.

Presence of metal or plastic drums for storing explosives.

Damage to ceilings and walls, such as corrosion of metal surfaces or structural damage, and paint discoloration from harsh chemical fumes.

Machinery such as gas burners or mixers for processing raw materials.

Strong chemical odors emanating from sewers and drain ditches.

Discoloration of pavement, soil, or structure.  
Refrigerators or coolers used to store volatile chemicals and finished products.

Indicators and Warnings for Homemade Explosives (FOUO – Publicly available)

### ***Iraninan Websites***

Mashreghnews ("Mashreghnews" is closed to armed forces. High likely IRGC. Due to its extreme focus on "air" related stuff, it might be connected to a company or an institute that works for IRGC's Aerospace Forces. Iran has two military. Artesh, or "Army" is the one that is conventional with most personnel, limited political involvement and low technology. IRGC or Sepah, made after Iraqs attack to Iran from ordinary people to protect the "revolution" and then remained as a whole separate military figure. Army has an Air force, IRAF. They are running the airplanes, specially F-14 Tomcats. Iran is the ONLY and largest owner of F-14s at the moment due to restrictions and also because bold military ties of U.S govt with Shah's Army before the Revolution. Back then, and even these days, Tomcats are stuff one can count on them. Army also has a Force name "Air Defense". These are the "S-300 bullshit" people who run Radars and surface to air offense. at IRGC side, they only have an Aerospace Force. While it has limited kid stuff planes, its focus is Missiles.) NOTE: Translating the site into English turns out to be very poor, however, with patience you can pick up enough key words to do follow up research  
<http://www.mashreghnews.ir/fa/news/156072/%D8%A7%D9%88%D9%84%DB%8C%D9%86-%DA%A9%D8%A7%D9%86%D8%AF%DB%8C%D8%AF%D8%A7%DB%8C-%D8%B1%DB%8C%D8%A7%D8%B3%D8%AA%E2%80%8C-%D8%AC%D9%85%D9%87%D9%88%D8%B1%DB%8C-%D9%85%D8%B4%D8%AE%D8%B5-%D8%B4%D8%AF>

Type link directly into URL box; clicking will not function <http://www.nogw.com/ilweapons.html>

Despite Israel's refusal to acknowledge its nuclear weapons status, its secret arsenal is an open secret that Israeli policy makers don't go out of their way to deny. From its beginnings in the mid-1960s, Israel's program has developed into one that rivals those of larger powers like France and Britain. Here, based on interviews with U.S. intelligence officials and nuclear experts, is a portrait of Israel's strategic weapons programs. <http://www.sweetliberty.org/issues/israel/strategic/index.shtml>

Click on a symbol or location for more about Israel's secret arsenal.

**SPECIAL REPORT** Mideast endgame: an interactive guide

Israel's Nuclear Facilities [http://www.atomicarchive.com/Almanac/IsraeliFacilities\\_static.shtml](http://www.atomicarchive.com/Almanac/IsraeliFacilities_static.shtml)

The following sites can be found in Google Earth or Bing Maps 3D by copying and pasting the latitudes and longitudes into the search box.

## Negev Nuclear Research Center, Dimona

Negev Nuclear Research Center. Plutonium production and extraction facilities, along with other weapons-related infrastructure.

31.001504°N, 35.146723°E

## Eilabun

Eilabun is Israel's second weapons storage facility. Tactical nuclear shells and land mines are among its contents.

32.760226°N, 35.412077°E

## Kfar Zekharya

Suspected nuclear missile base and bomb storage storage facility.

31.766267°N, 34.88142°E

## Nahal Soreq

Soreq is the equivalent of the U.S. national weapons laboratories. The lab handles weapons design and construction as well as research.

31.766267°N, 34.88142°E

## Yodefat

Suspected nuclear weapons assembly facility.

32.85093°N, 35.27916°E

## Tirosh

Reportedly one of two Israeli nuclear weapons storage facilities. It is speculated that that Tirosh is the strategic weapons storage site, while Eilabun is the tactical weapons storage site.

31.751963°N, 34.863524°E

## Rafael

Rafael has been responsible for the actual assembly of Israeli nuclear weapons.

32.889534°N, 35.09119°E

## *Language/Web Site Translators Online (In Other Words)*

European word translator. Enter one or two lower-case English words to see translations from Google Translate. <http://www.ukdataexplorer.com/european-translator/>

The notion of ‘foreign’ languages is beginning to disappear, thanks to ongoing developments by the likes of Google and Facebook that help the thousands of languages across the world be less foreign and more accessible. How? By making language translation easier than ever. In light of the technological progress in translation software made over the last decade, we may very well be on the cusp of witnessing the majority of language barriers between people groups disappear.

Not only does that mean everyone will be able to speak their natural tongue, learning another language will be purely out of interest or linguistic study, not a degree requirement for students or mandatory continuing education for international business people.

## Lessons Learned

Marine Corps Center For Lessons Learned

<https://www.mccll.usmc.mil/>

<https://www.mccll.usmc.mil/index.cfm?disp=links.cfm>

## Library Resources

**The Researching Librarian's Database Library.** (Note: I cannot recall where I obtained the following database but I certainly cannot take credit for it. I selected several at random to see if they were still active and inputted keywords that returned good results.)

**AATA Online: Abstracts of International Conservation Literature**  
<http://aata.getty.edu/NPS/>

"AATA Online is a comprehensive database of more than 100,000 abstracts of literature related to the preservation and conservation of material cultural heritage."  
-- Title page

**ACM Digital Library**  
<http://dl.acm.org/portal.cfm>

Freely searchable after a fairly painless registration. "As a service to the computing community, the Digital Library will continue to offer its search and bibliographic database resources to all visitors, for free. All you need to do is register with us." -- Title page

**AfricaBib**  
<http://www.africabib.org/>

Doing research on African libraries or librarianship? Definitely check here. "The site consists of two bibliographic databases covering Africana periodical literature (Bibliography of Africana Periodical Literature Database) and African Women's literature (African

Women's Database). You will also find a comprehensive bibliography on women travelers and explorers to Africa (Women Travelers, Explorers and Missionaries to Africa: 1763-2000: A Comprehensive English Language Bibliography)." -- "About" page

**ALB 1876 : American Libraries before 1876**  
<http://www.princeton.edu/~davpro/databases/index.html>

Part of the Davies Project at Princeton University, this database contains "Research into the History of University Libraries in the United States and the History of their Collections." -- Title Page

**All Academic**  
<http://www.allacademic.com/>

"All Academic is an academic index. It is designed to provide scholars and researchers with useful on-line source information about scholarly works. . . . Links are direct from source citations to scholarly publications. All Academic catalogs free publications only! Links to commercial and fee based scholarly publications are not included in this database." -- "About" information

**American Library Association Archives: Holdings Database**  
<http://www.library.illinois.edu/archives/ala/holdings/>

"This website provides a searchable interface for the American Library Association Archives' 'control card' database. The system includes records for over 1,100 archives or manuscript collections which have been arranged according to the archival principle of provenance. Materials are arranged in a three-part classification scheme of record group, record sub-group, and record series." -- Title page

**Anthropological Index of the Royal Anthropological Institute**  
<http://lucy.ukc.ac.uk/AIO.html>

A small but surprising number of entries concerning libraries. "The Anthropological Index Online is based on the journal holdings of The Anthropology Library at the The British Museum (Museum of Mankind) which receives periodicals in all branches of anthropology, from academic institutions and publishers around the world." -- Title page

**ARCHON Directory**

<http://www.nationalarchives.gov.uk/archon/>

"The ARCHON Directory includes contact details for record repositories in the United Kingdom and also for institutions elsewhere in the world which have substantial collections of manuscripts noted under the indexes to the National Register of Archives." -- Title page

**arlis.net Periodicals Database (formerly Union List of Art, Architecture and Design Serials)**

<http://www.arlis.net/>

"The arlis.net service is designed to help users to locate art, architecture and design publications, plus related materials. The service currently consists of a database of periodical titles (or magazines / journals / serials), and a related directory of art library resources in general. " Click on the periodicals tab at the top of the page. -- "Introduction"**Bibliographic Database of the Conservation Information Network (BCIN)**

<http://www.bcin.ca/>

"The Bibliographic Database of the Conservation Information Network (BCIN) provides access to over 190,000 bibliographic citations for conservation literature. BCIN includes citations from the Art and Archaeology Technical Abstracts (prior to 1998), technical reports, conference proceedings, journal articles, books and audiovisual and unpublished materials. The database also includes previously unavailable material from private sources, as well as new information gathered by a worldwide network of contributors." -- "About BCIN" page

**Bibliographical Society of the University of Virginia**

<http://bsuva.org/>

Of monumental importance, the first 51 volumes of **Studies in Bibliography**, offering a vast library of articles on bibliography and textual criticism, has been made available online by the Bibliographical Society. Also available are **Shakespearean Prompt-Books of the Seventeenth Century** and Emily Lorraine de Montluzin's **Attributions of Authorship in the Gentleman's Magazine** and **Attributions of Authorship in the European Magazine**.

**Book History Online: International Bibliography of the History of the Printed Book and Libraries**

<http://www.kb.nl/bc/abhb-en.html>

"Book History Online (BHO) is designed, managed, maintained and published by the Koninklijke Bibliotheek, National Library of the Netherlands, in co-operation with national committees in countries all over the world. BHO is a database in

English on the history of the printed book and libraries. It contains titles of books and articles on the history of the printed book worldwide. It is based on ABHB, the *Annual Bibliography of the History of the Printed Book and Libraries*." -- "Introduction" page

**Book Search Mashup**

<http://kokogiak.com/booksearch/>

This mashup created by Web developer, Alan Taylor at his site Kokogiak, lets you runs queries in Google Books, Amazon Search Inside/A9 and MSN Live Book simultaneously. Results appear side-by-side in 3 columns for quick comparison.

**BookServer**

<http://www.archive.org/bookserver>

"The BookServer is a growing open architecture for vending and lending digital books over the Internet. Built on open catalog and open book formats, the BookServer model allows a wide network of publishers, booksellers, libraries, and even authors to make their catalogs of books available directly to readers through their laptops, phones, netbooks, or dedicated reading devices. BookServer facilitates pay transactions, borrowing books from libraries, and downloading free, publicly accessible books." -- Homepage

**British Library Catalog**

<http://catalogue.bl.uk/>

"This service provides simple searching and ordering of documents from the British Library's extensive collections." -- Homepage

**British Library Manuscripts Catalog**

<http://molcat.bl.uk/>

"This On-line Catalogue is designed to offer a single means of access to the mainstream catalogues of the Department of Manuscripts covering accessions from 1753 to the present day." -- "About" page

**British Official Publications Collaborative Reader Information Service (BOPCRIS)**

<http://www.southampton.ac.uk/library/lldu/projects.htm>

"You can use this web site to search and browse information from British Official Publications over the period 1688-1995. You can also read abstracts, and view detailed consistent subject indexing, of key documents. You can then read the digitised full-text version of a limited number of these documents." -- Title page

**C-SPAN Video Library**

<http://www.cspanvideo.org/videoLibrary/>

"The C-SPAN Archives records, indexes, and archives all C-SPAN programming for historical, educational, research, and archival uses. Every C-SPAN program aired since 1987, now totaling over 160,000 hours, is contained in the C-SPAN Archives and immediately accessible through the database and electronic archival systems developed and maintained by the C-SPAN Archives." -- About page

**Canadian Association of Research Libraries Open Archives Metadata Harvester**

<http://carl-abrc-oai.lib.sfu.ca/>

"Welcome to the Canadian Association of Research Libraries (CARL) Institutional Repositories Pilot Project Harvester. This Harvester is the search service for the CARL Institutional Repositories Pilot Project and aggregates material from each of the participating Canadian institutions, allowing users to seamlessly search all of the repositories at once, using one common point of access." -- About this Archive page

**Catalogue of Digitized Medieval Manuscripts**

<http://manuscripts.cmrs.ucla.edu/>

"The Catalogue of Digitized Medieval Manuscripts offers a simple and straightforward means to discover medieval manuscripts available on the web. Very much a work in progress, the database will initially provide links to hundreds of manuscripts, which we expect quickly to grow to thousands. Basic information about the manuscripts is fully searchable, and users can also browse through the complete contents of the database. As the project develops, a richer body of information for each manuscript, and the texts in these codices, will be provided, where available." -- About us page

**Collection of Computer Science Bibliographies**

<http://liinwww.ira.uka.de/bibliography/>

"This is a collection of bibliographies of scientific literature in computer science from various sources, covering most aspects of computer science. The about 1200 bibliographies are updated monthly from their original locations such that you'll always find the most recent versions here. The collection currently contains more than one million references (mostly to journal articles, conference papers and technical reports) and consists of 660 MBytes of BibTeX entries. More than 16000 references contain crossreferences to citing or cited publications. More than 100,000 references contain URLs to an online version of the paper. There are more than 2000 links to other sites carrying bibliographic information." -- Title page

**COPAC**

<http://www.copac.ac.uk/>

"COPAC provides FREE access to the merged online catalogues of 21 of the largest university research libraries in the UK and Ireland." -- Title page

**Current Cites**

<http://currentcites.org/>

"A team of librarians and library staff monitors information technology literature in both print and digital forms, each month selecting only the best items to annotate for a free publication. The resulting issue of 10-20 annotated citations of current literature is emailed to a mailing list and is redistributed on other electronic fora. The individual citations are also individually indexed so that you can dynamically create your own Bibliography On-Demand. The items that are freely available on the Internet are also retrieved and indexed so that you can perform an Article Search of the full-text of these items." -- Title page

**DART-Europe E-theses Portal**

<http://www.dart-europe.eu/basic-search.php>

"DART-Europe is a partnership of research libraries and library consortia who are working together to improve global access to European research theses." - Homepage

**DataFerrett**

<http://dataferrett.census.gov/>

"DataFerrett is a unique data mining and extraction tool. DataFerrett allows you to select a databasket full of variables and then recode those variables as you need. You can then develop and customize tables. Selecting your results in your table you can create a chart or graph for a visual presentation into an html page. Save your data in the databasket and save your table for continued reuse." - Homepage

**DLIST - Digital Library of Information Science and Technology (University of Arizona)**

<http://arizona.openrepository.com/arizona/handle/10150/105067>

"Established in 2002, DLIST, Digital Library of Information Science and Technology is a cross-institutional, subject-based, open access digital archive for the Information Sciences, including Archives and Records Management, Library and Information Science, Information Systems, Museum Informatics, and other critical information infrastructures. The dLIST vision is to serve as a dynamic archive in the Information Sciences, broadly understood, and positively impact and shape scholarly

communication in our closely related fields." -- About page

**Digital Collections Registry**

<http://dlf.grainger.uiuc.edu/DLFCollectionsRegistry/browse/>

From the **Digital Library Federation**. A searchable database of members' public domain, online digital collections.

**Directory of Union Catalogs (IFLA)**

<http://archive.ifla.org/VII/2/duc/index.htm>

"This Directory is a complete listing of all known current national union catalogues in the world, including monograph, serial and general union catalogues. In order for catalogues to be included, they must be both national (or international) and current. Closed catalogues and regional or local catalogues are not listed. Specific subject catalogues are included where known, as well as those with a general subject coverage." -- Title page

**DLF Aquifer**

<http://www.diglib.org/aquifer/>

From the **Digital Library Federation**.

"Our purpose is to promote effective use of distributed digital library content for teaching, learning, and research in the area of American culture and life. We support scholarly discovery and access by: Developing schemas, protocols and communities of practice to make digital content available to scholars and students where they do their work; Developing the best possible systems for finding, identifying and using digital resources in context by promoting digital library best practices and developing tools and services to improve digital resource access and use" -- Title page

**E-LIS - The open archive for Library and Information Science**

<http://eprints.rclis.org/>

"E-LIS is an open access archive for scientific or technical documents, published or unpublished, on Librarianship, Information Science and Technology, and related areas. E-LIS relies on the voluntary work of individuals from a wide range of backgrounds and is non-commercial. It is not a funded project of an organization. It is community-owned and community-driven. We serve LIS researchers by facilitating their self-archiving, ensuring the long-term preservation of their documents and by providing world-wide easy access to their papers." -- Title page

**English Short Title Catalogue**

[http://estc.bl.uk/F/?func=file&file\\_name=login-bl-list](http://estc.bl.uk/F/?func=file&file_name=login-bl-list)

"The English Short Title Catalogue (ESTC) lists over 460,000 items:

published between 1473 and 1800; mainly in Britain and North America; mainly, but not exclusively, in English; from the collections of the British Library and over 2,000 other libraries." -- Title page

**ERIC Database**

<http://www.eric.ed.gov/>

"The Education Resources Information Center (ERIC), sponsored by the Institute of Education Sciences (IES) of the U.S. Department of Education, produces the world's premier database of journal and non-journal education literature. The new ERIC online system, released September 2004, provides the public with a centralized ERIC Web site for searching the ERIC bibliographic database of more than 1.1 million citations going back to 1966. Effective October 1, more than 107,000 full-text non-journal documents (issued 1993-2004), previously available through fee-based services only, will be available for free." -- Title page

**ERIC/AE Draft Abstracts**

<http://ericae.net/sinprog.htm> -- No longer available (closed by U.S. Dept. of Education as of 12/09/03)

"Processing of an ERIC abstract typically takes six to nine months from the time we prepare an abstract to the final product appearing in *Resources in Education* or the *Current Index to Journals in Education*. To help you obtain the latest information on assessment and evaluation, we created this experimental database of our abstract drafts. We update this database every Thursday or Friday night. Since we usually prepare abstracts within 2 or 3 weeks of receiving the paper or journal, this information is very current." -- Title page

**ERIC/AE Full Text Internet Library**

<http://ericae.net/ftlib.htm> -- No longer available (closed by U.S. Dept. of Education as of 12/09/03)

Includes sections of full-text articles on educational quality, learning theory, evaluation, student evaluation, tests and testing, professional standards, research, and statistical analysis. Article example: [How to Write a Scholarly Research Report](#).

"Here you will find links to some of the best full-text books, reports, journal articles, newsletter articles and papers on the Internet that address educational measurement, evaluation and learning theory. We have selected these documents based upon criteria that are widely accepted in the library and information science community and we have provided a framework so that you can easily browse these resources." -- Title page

**ERIC/IT Full Text Database**

<http://www.ericit.org/fulltext.shtml> -- No

**longer available (closed by U.S. Dept. of Education as of 12/09/03)**

"Search over 1,000 of the latest research reports, conference papers, opinion papers, selected articles and other ERIC documents in the fields of Library Science and Educational Technology and receive the documents in full text immediately." -- Title page

**EdResearch**  
<http://cunningham.acer.edu.au/dbtw-wpd/sample/edresearch.htm>

The EdResearch Online database is housed [Acer Cunningham Library](#) and indexes over 13,800 education research articles, many of which have full-text available. The database is updated monthly.

**FindArticles.com**  
<http://findarticles.com>

"FindArticles is a specialized search engine designed to help you quickly and easily find published articles on the topics that interest you. Our database has hundreds of thousands of articles from more than 300 magazines and journals, dating back to 1998. FindArticles even brings some print-only publications to the Web for the first time." -- "Help" page

**TheFreeLibrary.com**  
<http://www.thefreelibrary.com/>

"Since 2003, The Free Library has offered free, full-text versions of classic literary works from hundreds of celebrated authors, whose biographies, images, and famous quotations can also be found on the site. Recently, The Free Library has been expanded to include a massive collection of periodicals from hundreds of leading publications covering Business and Industry, Communications, Entertainment, Health, Humanities, Law, Government, Politics, Recreation and Leisure, Science and Technology, and Social Sciences. This collection includes millions of articles dating back to 1984 as well as newly-published articles that are added to the site daily." -- Homepage

**getCITED**  
<http://www.getcited.org/>

"getCITED is a site that exists to facilitate the dissemination and discussion of academic research. It has numerous features, but at its core, it consists of two things: a database and a discussion forum. What makes getCITED's database truly unique is that it lets scholars and researchers decide what its content should be. What makes its discussion forum truly unique is the fact that, within the comments posted, you can create LINKS to PUBLICATIONS and IDENTITIES within the getCITED database." -- "About" page

**Google Book Search**  
<http://books.google.com/>

The searchable interface for Google's mass book digitization project. page

**GPO Access Browse Topics**  
<http://www.browsetopics.gov/>

"This service arranges U.S. Government sites by topic. The main list of topics is based upon the current Guide to U.S. Government Information, also known as The Subject Bibliography Index." -- Title page

**GPO Access Multi-Database Search**  
<http://www.gpoaccess.gov/multidb.htm>

Useful for searching a variety of federal government publications for information pertaining to libraries. Includes the United States budget, Congressional bills, the *Congressional Record*, the *Federal Register*, public laws, and the *United States Code*, among other items.

**GrayLIT Network - See Science.gov**

**HCI Bibliography: Human-Computer Interaction Resources**  
<http://www.hcibib.org/>

"The HCI Bibliography is a free-access online bibliographic database on Human-Computer Interaction. The basic goal of the Project is to put an electronic bibliography for most of HCI on the screens of all researchers, developers, educators and students in the field through the World-Wide Web and anonymous ftp access." -- "About" page

**Index Translationum**  
<http://www.unesco.org/culture/xtrans/>

"INDEX TRANSLATIONUM data base contains cumulative bibliographical information about books translated and published in about a hundred of UNESCO Member States from 1979, totaling some 1,300,000 notices in all disciplines: literature, social and human sciences, natural and exact sciences, art, history, etc." -- Title page

**Infotrieve**  
<http://www.infotrieve.com/>

Many LIS journals are indexed in ArticleFinder, "Infotrieve's free-to-search proprietary bibliographic database containing over 22 million citations and over 10 million abstracts from more than 35,000 of the most important scholarly journals from fields such as medicine, biotechnology, science, engineering, and law." -- "About" page

**Ingenta**  
<http://www.ingentaconnect.com/>

CARL UnCover is defunct, now incorporated into Ingenta. Free searching.

**Internet Archive**  
<http://www.archive.org/index.php>

"The Internet Archive is building a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public." -- IA Homepage

**Internet Speculative Fiction Database**  
<http://www.isfdb.org/cgi-bin/index.cgi>

Hosted by the Cushing Library Science Fiction and Fantasy Research Collection and Institute for Scientific Computation at Texas A&M University, "The ISFDB is an effort to catalog works of Science Fiction, Fantasy, and Horror. It links together various types of bibliographic data: author bibliographies, publication bibliographies, award listings, magazine content listings, anthology and collection content listings, yearly fiction indexes, and forthcoming books." -- Homepage

**Intute**  
<http://www.intute.ac.uk/>

"Intute is a free online service providing you with access to the very best Web resources for education and research. The service is created by a network of UK universities and partners. Subject specialists select and evaluate the websites in our database and write high quality descriptions of the resources." -- Homepage

**lexisONE**  
<http://law.lexisnexis.com/webcenters/lexisone/>

Provides full-text of case law (state and federal), legal forms, and a legal internet guide.

**Library, Information Science & Technology Abstracts (LISTA)**  
<http://www.libraryresearch.com>

"EBSCO Publishing is proud to provide the Library, Information Science & Technology Abstracts (LISTA) database as a free resource to anyone interested in libraries and information management. Delivered via the EBSCOhost platform, LISTA indexes nearly 600 periodicals plus books, research reports, and proceedings. With coverage dating back to the mid-1960s, it is the oldest continuously produced database covering the field of information science." -- EBSCO Free Databases page

**LigerCat : Literature and Genomics Resource Catalogue**  
<http://ligercat.ubio.org/>

"LigerCat was created as part of the Biology of Aging project at the MBLWHOI Library at the Woods Hole Marine Biological Laboratory.

LigerCat is a search tool for NCBI's PubMed that uses tag clouds to provide an overview of important concepts and trends. LigerCat aggregates multiple articles in PubMed, summing their MeSH descriptors and presenting them in a cloud, weighted by frequency.

Medical Subject Headings (MeSH) is a large controlled vocabulary created and maintained by the National Library of Medicine to categorize and index journal articles in the life sciences. MeSH descriptors are akin to tags in a blog post, but scientific articles are tagged with MeSH descriptors by respected librarians and scientists.

In addition to providing a visual overview of a set of PubMed articles, LigerCat can search PubMed in realtime. Simply click on one or more MeSH descriptors in a tag cloud to search PubMed for those terms instantly." -- About page

**Medieval Feminist Index**  
<http://www.haverford.edu/library/reference/mschaus/mfi/mfi.html>

Great for items about medieval books, libraries, etc., with a feminist slant. A quick test search turned up, among others, "A Library Collected by and for the Use of Nuns" and "Reassessing Women's Libraries in Late Medieval France." "The Medieval Feminist Index covers journal articles, book reviews, and essays in books about women, sexuality, and gender during the Middle Ages." -- "What is the MFI?" page

**MagPortal**  
<http://www.magportal.com/>

Searches and returns full-text articles from web publications. Should prove useful for some topics.

**National Criminal Justice Reference Service (NCJRS) Abstracts Database**  
<http://www.ncjrs.gov/abstractdb/search.asp>

Useful for prison librarianship research. "The National Criminal Justice Reference Service Abstracts Database contains summaries of more than 160,000 criminal justice publications, including Federal, State, and local government reports, books, research reports, journal articles, and unpublished research." -- Title page

**National Union Catalog of Manuscript Collections (NUCMC)**  
<http://www.loc.gov/coll/nucmc/>

Provides access to the RLIN AMC (Archival and Mixed Collections) file and the OCLC bibliographic database describing archival and manuscript collections in public, college and university, and special libraries located throughout North America and around the world. "NUCMC, or the National Union Catalog of Manuscript Collections, is a free-of-charge cooperative cataloging program operated by the Library of Congress." -- Title page

**Networked Digital Library of Theses and Dissertations (NDLTD)**  
<http://www.ndltd.org/>

The goals of the NDLTD are as follows: "To improve graduate education by allowing students to produce electronic documents, use digital libraries, and understand issues in publishing; to increase the availability of student research for scholars and to preserve it electronically; to lower the cost of submitting and handling theses and dissertations; to empower students to convey a richer message through the use of multimedia and hypermedia technologies; to empower universities to unlock their information resources; to advance digital library technology." -- Title page

**NewspaperCat : Catalog of Digital Historical Newspapers**  
<http://www.newspapercat.org/>

"The Catalog of Digital Historical Newspapers (NewspaperCat) is a tool that facilitates the discovery of online digitized historical newspaper content from newspapers published in the United States and the Caribbean. NewspaperCat was funded by a grant from the George A. Smathers Libraries.

Search by keyword, newspaper title or by city, county or state to locate titles. From your search result, click on the link(s) to connect to the digital newspaper(s). In many cases, this content is keyword searchable, depending on the hosting organization.

NewspaperCat currently links to over 1000 full-text newspaper titles with a goal to include links to as many US and Caribbean newspapers with archival digital content as possible.. Plans are to expand the Catalog as newly digitized newspaper titles are located." -- Title page

**OAster**  
<http://www.oclc.org/oaister/>

"OAster is a Mellon-funded project of the University of Michigan Digital Library Production Services. Our goal is to create a wide-ranging collection of free, useful, previously difficult-to-access digital

resources that are easily searchable by anyone." -- Title page

**OpenDOAR: Directory of Open Access Repositories**  
<http://www.opendoar.org/>

"The OpenDOAR service is being developed to support the rapidly emerging movement towards Open Access to research information. This will categorise and list the wide variety of Open Access research archives that have grown up around the world." -- Title page

**Open Access Directory**  
[http://oad.simmons.edu/oadwiki/Main\\_Page](http://oad.simmons.edu/oadwiki/Main_Page)

"The Open Access Directory (OAD) is a compendium of simple factual lists about open access (OA) to science and scholarship, maintained by the OA community at large. By bringing many OA-related lists together in one place, OAD will make it easier for everyone to discover them and use them for reference. The easier they are to maintain and discover, the more effectively they can spread useful, accurate information about OA." -- Title page

**Public Library Geographic Database (PLGDB) Map**  
<http://www.geolib.org/PLGDB.cfm>

"The database includes the locations of America's 16,000 public libraries, population characteristics from the US Census that best describe people that use libraries, and library use statistics from the National Center for Educational Statistics. " -- Homepage

**PQDT Open**  
<http://pqdtopen.proquest.com/>

"PQDT Open provides the full text of open access dissertations and theses free of charge.

You can quickly and easily locate dissertations and theses relevant to your discipline, and view the complete text in PDF format." -- About page

**PubMed (MEDLINE, etc.)**  
<http://www.ncbi.nlm.nih.gov/entrez/>

Very useful for researching medical library topics, information use in the health care industry, and so on. *Bulletin of the Medical Library Association*, *Health Libraries Review*, and *Hospital Libraries* are included among journals indexed. "PubMed provides access to bibliographic information, which includes MEDLINE as well as the out-of-scope citations (e.g., articles on plate tectonics or astrophysics) from certain MEDLINE journals, primarily general science and chemistry journals, for which the life sciences articles are indexed for MEDLINE; citations that

precede the date that a journal was selected for MEDLINE indexing; some additional life science journals that submit full text to PubMedCentral and receive a qualitative review by NLM." -- "Overview" page

**RAMBI: The Index of Articles on Jewish Studies**  
<http://jnul.huji.ac.il/rambi/>

If you're researching Jewish libraries, their materials, etc., this catalog is a wonderful resource. "RAMBI - The Index of Articles on Jewish Studies - is a selective bibliography of articles in the various fields of Jewish studies and in the study of Eretz Israel. Material listed in Rambi is compiled from thousands of periodicals and from collections of articles - in Hebrew, Yiddish, and European languages- mainly from the holdings of the Jewish National and University Library, a world center for research on the Jewish people and Eretz Israel. The main criterion for inclusion in the bibliography is that the article be based on scientific research, or contain important information for such research." - "About" page

**Reference Reviews Europe Online**  
<http://rre.casalini.it/>

"Over 1000 European reference book reviews online, full-text searchable, updated quarterly." -- Title page

**refseek**  
<http://www.refseek.com/>

"Currently in public beta, RefSeek is a web search engine for students and researchers that aims to make academic information easily accessible to everyone. RefSeek searches more than one billion documents, including web pages, books, encyclopedias, journals, and newspapers. RefSeek's unique approach offers students comprehensive subject coverage without the information overload of a general search engine—increasing the visibility of academic information and compelling ideas that are often lost in a muddle of sponsored links and commercial results." -- About page

**ResearchIndex**  
<http://citeseer.ist.psu.edu/index.jsp>

"ResearchIndex is a digital library that aims to improve the dissemination, retrieval, and accessibility of scientific literature. Specific areas of focus include the effective use of web, and the use of machine learning . . . The ResearchIndex project encompasses many areas including the location of articles, full-text indexing of the articles, autonomous citation indexing, reference linking, information extraction, display of query-sensitive summaries, extraction of citation context, distributed error correction, related document detection, and user profiling." -- "Welcome" page

**Science Fiction and Fantasy Research Database**  
<http://sffrd.library.tamu.edu/>

"The Science Fiction and Fantasy Research Database is an on-line, searchable compilation and extension of Science Fiction and Fantasy Reference Index 1878-1985, Science Fiction and Fantasy Reference Index 1985-1991, and Science Fiction and Fantasy Reference Index 1992-1995, including material located since publication of the last printed volume." -- Introduction

**Science.gov**  
<http://www.science.gov/>

"Science.gov is a gateway to over 50 million pages of authoritative selected science information provided by U.S. government agencies, including research and development results." -- Home page. This database includes Office of Scientific and Technical Information's (OSTI) GrayLIT Network.

**ScientificCommons.org**  
<http://www.scientificcommons.org/>

"The major aim of the project is to develop the world's largest communication medium for scientific knowledge products which is freely accessible to the public. ScientificCommons.org is a project of the University of St.Gallen (Switzerland) and hosted and developed at the Institute for Media and Communications Management." -- About ScientificCommons.org

**Scirus**  
<http://www.scirus.com/>

This search engine retrieves a surprising number of articles from library and information science journals, in addition to relevant web sites. "Responding to the need for focused, comprehensive and reliable overviews of relevant scientific information, Elsevier Science has developed the powerful Internet search tool Scirus. Scirus distinguishes itself from existing search engines by concentrating on scientific content only and by searching both Web and membership sources." -- "About" page

**TechRepublic's White Paper Search**  
<http://www.techrepublic.com/whitepaper>

"TechRepublic® provides IT professionals a valuable technical content resource dedicated to meeting their day-to-day demands for timely and relevant Information Technology-focused knowledge and insight." -- "CNET Networks" page

**TRAIL - Technical Report Archive and Image Library**  
<http://digicoll.manoa.hawaii.edu/techreports/index.php?c=1>

The Greater Western Library Alliance ([GWL](#)) and the Center for Research Libraries ([CRL](#)) bring us "a collaborative project to digitize, archive, and provide persistent and unrestricted access to federal technical reports issued prior to 1975." – Homepage

**UNESDOC: UNESCO Full Text Documents**  
<http://unesdoc.unesco.org/ulis/>

Provides access to full-text documents published by UNESCO, many on issues related to library and information science, such as copyright, access to information, and so on. Note that documents are in PDF format, which requires the free [Adobe Acrobat Reader](#).

**Library Spot**  
**World Category User**

In this video you'll learn how to create a List on WorldCat.org and get some good ideas on fun things to do with WorldCat Lists.

## ***Lone Wolves***

**Lone wolves: myth or reality** (Lone wolves: myth or reality is a new report from Searchlight that examines the question of whether extreme-right terrorists are isolated individuals – lone wolves – or are connected with and the inevitable consequence of the activities of the various far-right, often small, organisations that espouse a violent racist and fascist ideology.

The project and report arose out of the work of Gerry Gable in gathering and analysing intelligence on the extreme right since May 1964 and his later work as an independent adviser on race hate crime to the Metropolitan Police Service. The report includes case studies of nearly 40 individuals holding far-right political views who have been convicted for serious violence or terrorist offences. It concludes that they were motivated, and obtained the knowledge and means to carry out their acts, through dangerous, far-right networks that introduced them to a perverse ideological world. The report demonstrates conclusively that far-right terrorists are not lone wolves but are connected with a number of insidious organisations.) Download Report at

### **Major Commands (MACOMS)**

Unified Command Plan 2011 - The Department of Defense updated the Unified Command Plan, a key strategic document that establishes the missions, responsibilities, and geographic areas of responsibility for commanders of combatant commands. UCP 2011, signed by President Obama on April 6, 2011, assigns several new missions to the combatant commanders.

Every two years, the Chairman of the Joint Chiefs of Staff is required to review the missions, responsibilities, and geographical boundaries of each combatant command and recommend to the President, through the Secretary of Defense, any changes that may be necessary.

Significant changes made by UCP 2011 include:

- Shifting AOR boundaries in the Arctic region to leverage long-standing relationships and improve unity of effort.
- Giving U.S. Northern Command responsibility to advocate for Arctic capabilities.
- Codifying the President's approval to disestablish U.S. Joint Forces Command.
- Expanding U.S. Strategic Command's responsibility for combating weapons of mass destruction and developing Global Missile Defense Concept of Operations.
- Giving U.S. Transportation Command responsibility for synchronizing planning of global distribution operations.

The UCP 2011 continues to support U.S. defense security commitments around the world while improving military responsiveness to emerging crises.

Last Updated April 27, 2011

MashupForge (creation tool that allows anyone to easily create a Google Map without having to use the Google Maps API. The tool allows users to create a Google Map with markers or to create a map from an uploaded image. Adding markers to a Mashupforge map is a simple process of dropping the marker on the correct location and entering the information you wish to appear in the information window. To create a map from an image simply involves uploading an image. The screenshot above shows a map created from one of NASA's Blue Marble monthly images uploaded to Mashupforge. Custom maps created with Mashupforge can be embedded in any website by cutting and pasting the provided iframe code. Alternatively users can just share the link of their created map's URL.)	<a href="http://mashupforge.com/">http://mashupforge.com/</a>
MapWindow (The MapWindow GIS project includes a free and open source desktop geographic information system (GIS) with an extensible plugin architecture; a GIS ActiveX control; and C# GIS programmer library called DotSpatial.)

Free Relief Maps for Google Maps (Maps-For-Free has produced a nice Google Maps application that lets you view a number of relief map layers. Not only can you use the application to view the relief maps you can add them to your own Google Maps. Maps-For-Free offers free relief maps and other additional layers which can easily be integrated into your own Google Map projects)

<http://www.maps-for-free.com:80/>

Wikimapia

<http://www.wikimapia.org/>

Free Geography Tools

<http://freegeographytools.com/>

Maps Compare (Maps Compare is a website with four different on-line map services on one page.

The site places Google Maps, the Google Earth browser plugin, Yahoo Maps and Bing Maps beside each other, which can be quite useful if you want to compare the map coverage provided by each provider in different locations)

<http://geshout.com/mapscompare/all.php>

Buncha Maps (Map comparison sites always seem to be very popular. One of the most popular searches on Google Maps Mania seems to be for sites that let you view the different online map providers side-by-side. Buncha Maps is a new application that lets you view Google Maps, Bing Maps, ESRI Maps and OSM all in the same window. Actions in all four maps are synchronised, so if you pan and zoom in any of the maps the other maps will also show the selected view) <http://swingley.appspot.com/maps/four>

Dual Maps (Dual Maps is a map creation tool that allows anybody to make an embeddable map that includes a Google Map, a Google Maps Street View and a Virtual Earth Bird's Eye view of the same location. You can choose between the various options of either map service, which means you can have the Google satellite view alongside Virtual Earth's Bird's Eye view or the satellite/aerial View in both maps etc)

## Marine Corps

One-Eight Basetrack is an experimental media project, tracking the deployment of 1/8 – 1st Battalion, Eighth Marines, throughout the duration of their deployment to southern Afghanistan. A small team of mobile media operators is embedded with the battalion, transmitting their reports and reflections from Helmand province as they travel across the battalion's area of operations.

## **Medical Intelligence (MEDINT)**

That category of intelligence resulting from collection, evaluation, analysis, and interpretation of foreign medical, bio-scientific, and environmental information that is of interest to strategic planning and to military medical planning and operations for the conservation of the fighting strength of friendly forces and the formation of assessments of foreign medical capabilities in both military and civilian sectors. Also called MEDINT. Operation Enduring Freedom proved the worth of incorporating medical intelligence into all-source intelligence. (JP 2-01)

There's now no denying that West Africa's Ebola outbreak has become a global crisis. After months of downplaying the threat, Western governments are facing the painful fact that the situation is deteriorating fast. It's now plain to see that the world is at the precipice of something genuinely awful, with official predictions of more than a million new infections by the new year. Given that the death rate among those infected with Ebola is roughly fifty percent — and a good deal higher in underdeveloped regions like West Africa — serious concern is warranted. Continue reading at <http://20committee.com/2014/10/03/the-ebola-crisis-and-medical-intelligence/>

The National Library of Medicine (NLM), on the campus of the National Institutes of Health in Bethesda, Maryland, has been a center of information innovation since its founding in 1836. The world's largest biomedical library, NLM maintains and makes available a vast print collection and produces electronic information resources on a wide range of topics that are searched billions of times each year by millions of people around the globe. It also supports and conducts research, development, and training in biomedical informatics and health information technology. In addition, the Library coordinates a 6,000-member National Network of Libraries of Medicine that promotes and provides access to health information in communities across the United States.

Health Line

<http://www.healthline.com/>

Health Map (HealthMap, a team of researchers, epidemiologists and software developers at Boston Children's Hospital founded in 2006, is an established global leader in utilizing online informal sources for disease outbreak monitoring and real-time surveillance of emerging public health threats. The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases for a diverse audience including libraries, local health departments, governments, and international travelers. HealthMap brings together disparate

data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health. Through an automated process, updating 24/7/365, the system monitors, organizes, integrates, filters, visualizes and disseminates online information about emerging diseases in nine languages, facilitating early detection of global public health threats.)

## Military Magazines

### [\*\*Air Force Link\*\*](#)

Official U.S. Air Force site featuring news, video, photos, career information, and comprehensive general information library.

### [\*\*All Military Weapons\*\*](#)

Website providing information about all kinds of military weapons from around the world.

### [\*\*Army Magazine\*\*](#)

Focuses on the activities of the U.S. Army worldwide and provides articles for a professionally oriented audience.

### [\*\*Army Technology\*\*](#)

Website for the defence industries.

### [\*\*Blackanthem.com\*\*](#)

Independent site offering a selection of military news that normally is not found in the mainstream media.

### [\*\*Canadian Military Journal\*\*](#)

Official professional magazine of the Canadian Forces and the Department of National Defence.

### [\*\*Defense-Aerospace\*\*](#)

France-based aerospace, defense and military news and information site.

### [\*\*Defense Daily Network\*\*](#)

Defense industry news, analysis and business information.

### [\*\*Defense Media Network\*\*](#)

Military news and history regarding the air force, navy, army and special operations.

### [\*\*Defense News\*\*](#)

Find late-breaking defense news from the leading defense news weekly.

### [\*\*Defense Update\*\*](#)

International magazine providing news and information about new systems and military export, covering primarily Israeli industries.

### [\*\*Defense World\*\*](#)

Features defense market news analysis, contracts & procurements news, defence market dresearch.

### [\*\*Eye Spy\*\*](#)

Magazine covering intelligence, espionage, and covert operations.

### [\*\*Federation of American Scientists \(FAS\)\*\*](#)

Covers wide range of military topics and hosts various organization's projects such as Biological Weapons, CyberStrategy, Military Analysis, Nuclear Weapons, and more.

### [\*\*G2mil\*\*](#)

Independent military magazine covering technology, weapons, tactics, future warfare, and military news.

### [\*\*Jane's Information Group\*\*](#)

Premier source for defense and geopolitics news and information. Full articles available only for subscribers.

### [\*\*Leatherneck\*\*](#)

Magazine of the Marines covering their operations, equipment, training, and history.

### [\*\*Military Information Technology\*\*](#)

Features network centric warfare, information assurance, networking, tactical communications, rugged

computers, video conferencing and more.

### [\*\*Military Medical Technology\*\*](#)

Provides reports on the latest in NBC detection, telemedicine, pharmacy issues, and battlefield medical devices and simulation.

### [\*\*Military Times\*\*](#)

Entryway to several military magazines:

[\*\*Air Force Times\*\*](#)

[\*\*Army Times\*\*](#)

[\*\*Marine Corps Times\*\*](#)

[\*\*Navy Times\*\*](#)

### [\*\*MilitarySpot.com\*\*](#)

Military news and information portal.

### [\*\*Pilots and Planes Military\*\*](#)

Fully digital military aircraft magazine.

### [\*\*Popular Mechanics - Defense\*\*](#)

Articles covering military technology, history, and weapons.

### [\*\*Soldier of Fortune\*\*](#)

Selected articles from infamous magazine covering military and intelligence operations from around the globe.

### [\*\*Soldiers for the Truth \(SFTT\)\*\*](#)

Grass-roots organization of veterans seeking to inform the American public on the decline in readiness of armed forces. Produces online magazine DefenseWatch.

### [\*\*Space War\*\*](#)

Daily news about military-space and nuclear-weapon technology and policy.

**Special Operations.Com**

Unofficial US special operations site.

arenas of the world, military policy and intelligence.

**Strategy Page**

Covers current military technology trends, conflicts in all

**Stratfor**

Provides strategic intelligence on global business, economic, security, geopolitical affairs and military developments.

**War Times Journal**

Free access online magazine covering all periods of military history and military science. Presents articles and archives relating to wars, with an emphasis on eyewitness accounts and personal experiences.

National Defense  
Military Magazines

## North Korea/Korean Military

What we know about North Korea's cyberarmy [http://www.pcworld.com/article/2861692/what-we-know-about-north-koreas-cyberarmy.html#tk.rss\\_all](http://www.pcworld.com/article/2861692/what-we-know-about-north-koreas-cyberarmy.html#tk.rss_all)

### The Cyberunits

North Korea's governing structure is split between the Workers' Party of Korea (WPK) and the National Defense Commission (NDC).

North Korea's main cyberoperations run under the Reconnaissance General Bureau (RGB), which itself falls under the Ministry of People's Armed Forces that is in turn part of the NDC. The RGB has been operational for years in traditional espionage and clandestine operations and formed two cyberdivisions several years ago called Unit 121 and Office 91.

Office 91 is thought to be the headquarters of North Korea's hacking operation although the bulk of the hackers and hacking and infiltration into networks is done from Unit 121, which operates out of North Korea and has satellite offices overseas, particularly in Chinese cities that are near the North Korean border. One such outpost is reportedly the Chilbosan Hotel in Shenyang, a major city about 150 miles from the border. A third operation, called Lab 110, participates in much the same work.

There are also several cyberunits under North Korea's other arm of government, the Workers' Party of Korea.

Unit 35 is responsible for training cyberagents and is understood to handle domestic cyberinvestigations and operations. Unit 204 takes part in online espionage and psychological warfare and Office 225 trains agents for missions in South Korea that can sometimes have a cyber component.

### **Training**

The North Korean school system emphasizes the importance of mathematics to students from a young age. The most gifted are given access to computers where they can begin practicing programming skills and, if they are good enough, go on to one of a handful of schools that have specialist computer departments. These are typically Kim Il Sung University, the country's most prestigious seat of learning, Kim Chaek University of Technology or Mirim College. Much less is known about the latter, although it's believed to be a specialist cyberwarfare school.

The students learn general programming techniques and will also specialize in disciplines such as cyberwarfare. After graduating, they will sometimes be sent to study overseas. That's when, with an open Internet connection and the anonymity of a foreign network, they can start participating in hacker forums, developing malicious software and testing out their skills.

Over the past few years, it's estimated the schools have turned out several thousand students (estimates range from around 2,000 to around 6,000), who now make up North Korea's cyberforces.

### **International Network**

North Korea has a single connection to the Internet, so attacks from inside the country would be quite easy to trace. As a result, the country uses computers around the globe to launch attacks. Often these are compromised PCs and the owners have no idea they've been infected with North Korean malware. Some of the initial attacks to help build this network of infected computers are thought to be launched from North Korean outpost offices in places like China, Russia and India.

### **Operations and attacks**

While pinning down the true perpetrator of cyberattacks is incredibly difficult, a number of attacks in recent years have been blamed on North Korea. Some, like the Sony hack, have been high-profile but many others have gotten much less attention and appear more aimed at earning money than causing disruption.

**July 2009** - Attackers target government websites in the U.S. and South Korea in large-scale distributed denial of service (DDOS) attacks that were later blamed on North Korea.

**March 2011** - In an attack dubbed "10 Days of Rain," major South Korean government websites and sites operated by the U.S. military in South Korea are targeted in DDOS attacks.

**April 2011** - South Korea's Nonghyup bank is targeted in a DDOS attack that was later traced to North Korea and linked with previous attacks.

**August 2011** - South Korean police accuse a North Korean hacking ring of stealing around \$6 million in prize money from online games.

**November 2011** - A hacker attempts to hack the email system of Korea University's Graduate School of Information Security in an action later blamed on North Korea.

**June 2012** - Conservative South Korean newspaper *Joong Ang Ilbo* is hit by a cyberattack that succeeded in destroying databases. A week earlier, North Korea had threatened the newspaper over its coverage of the country.

**March 2013** - A major cyberattack, later blamed on North Korea, paralyzes the networks of several major South Korean TV broadcasters. A bank ATM network is also hit in the attack, which attempted to wipe the hard drives of computers. A second attack pushes the DNS servers of government websites offline for several hours. At around the same time, North Korea's connection with the global Internet goes down for 36 hours.

**March 2013** - Responding to the attacks, the hacking group Anonymous targets North Korean websites. It succeeds in breaking into a major North Korean news portal and publishes the names and account details of thousands of subscribers.

**June 2013** - Hackers post names, social security numbers and other personal information of thousands of U.S. armed forces members stationed in South Korea online.

**June 2013** - South Korean government DNS servers are targeted by a DDOS attack. Similarities are found in the code that links it to the March attacks.

**December 2013** - South Korean police say North Korean agents are behind a spear-fishing attack on the computer of a prominent defector.

**November 2014** - South Korea's spy agency said North Korean hackers had planted malware in around 20,000 smartphones.

THE SOURCE A 100% Open-Source Intelligence Deliverable

<http://www.theintelligencecommunity.com/news-osint/>

Xplored (Our Information Services team provides members of the defence, diplomatic, development, oil & gas and infrastructure sector operating in potentially high-risk and complex environments with a comprehensive range of risk analysis, intelligence, crisis response, and training services. These services are designed to provide clients with the proactive capability to remain aware in potentially hostile environments and identify risks while strengthening their reactive capacity in emergency situations.

GardaWorld's constant monitoring of the high-risk environments in which we work is conveyed through our range of risk analysis publications. Our .Xplored Threat and Incident Reports provide our clients with current detailed updates delivering ground-truth information to assist both our personnel and our clients in their decision-making. Moving away from the historical text heavy and intensive formats that make it difficult to digest the important facts in a timely manner, the .Xplored format is relevant, succinct, easy-to-read and graphic, whilst retaining integrity and detailed content.)

Foreign Military Studies Office. The Foreign Military Studies Office (FMSO) at Fort Leavenworth, Kansas, is an open source research organization of the U.S. Army. Founded as the Soviet Army Studies Office in 1986, it was an innovative program that brought together military specialists and civilian academics to focus on military and security topics derived from unclassified, foreign media. The results were unclassified articles and papers that provided new understandings and broad access to information from a base of expertise in the U.S. Army, Department of Defense, and foreign and U.S. defense communities and universities.

Open Source Intelligence Links (Updated 04/05/2014)

OSINT Training by Michael Bazzell

Note: I purposely left out some entries because of the potential that some may lead to adult sites.

This is an awesome site and I encourage you to visit often.

International Security Research and Intelligence Agency <http://www.isria.info/>

The Intelligence Network: IntellNet is dedicated to providing individuals and groups aggregated news and documents from around the world in an easy-to-access and understand format. Founded in early 2000 as a private project to more easily disseminate information, during the 4 years since its creation IntellNet proved itself to be a great source of knowledge. With today's re-launch, The Intelligence Network will stand upon the shoulders of giants in order to see further and push higher; expanding upon the very foundations of the U.S. Open Source Intelligence (OSINT) community. <http://www.intellnet.org/>

Sources And Methods

<http://sourcesandmethods.blogspot.com/2008/01/bahraini-foreign-minister-speaks-iiss.html>

This is a website that describes various terrorist groups of the world. It lists their known activities, their strength, location/area of operation and external aid. It is part of the SITE Institute's website that documents and tracks terror-related violence and "extremist websites, public records, and international media reports" to establish "links among terrorist entities and their supporters." Site features links to news, background on terrorist groups, material about court cases, and audio and video clips. Some material in other sections of the site available for a fee. Publisher: SITE Intelligence Group.

## Open Source Intelligence Tools

Please note even though the aim is to provide information for free OSINT Tools, some may require a subscription or commercial fee. It's not listed, but of course popular Social Networks such as Facebook, Twitter, LinkedIn and alike have a wealth of information. Of course also consider older sources that are now less popular, it's amazing what people leave behind in places like MySpace. Also remember that search engines show you stuff that's popular, not perhaps the obscure stuff (deep web) you are searching for, so get creative with your search queries and use the various tools at your disposal.

Lastly I will add alot of Social Engineers dont have alot of global exposure, so do your homework of where you are targeting. If you are targeting Japan for example their number 1 Social Network is not Facebook, so you need to do recon in the right places, and put in the extra legwork to gain the relevant access. Source: Dale Pearson

<http://www.subliminalhacking.net/2012/12/27/osint-tools-recommendations-list/#comments>

[Spokeo](#) - People search engine and free white pages finds phone, address, email, and photos. Find people by name, email, address, and phone for free.

[theHarvester](#) - This tool is intended to help Penetration testers in the early stages of the penetration test in order to understand the customer footprint on the Internet. It is also useful for anyone that wants to know what an attacker can see about their organization.

[Foca](#) - FOCA 3.2 Free is a fingerprinprint and information gathering tool for pentesters. It searches for servers, domains, URLs and public documents and print out discoverd information in a network tree. It also searches for data leaks such as metadata, directory listing, unsecure HTTP methods, .listing or .DS\_Store files, actived cache in DNS Serves, etc...

[Shodan](#) - Search for computers based on software, geography, operating system, IP address and more

[Maltego](#) - Maltego is a unique platform developed to deliver a clear threat picture to the environment that an organization owns and operates. Maltego's unique advantage is to demonstrate the complexity and severity of single points of failure as well as trust relationships that exist currently within the scope of your infrastructure.

[Deep Magic](#) - Search for DNS records and other fun stuff

[Jigsaw](#) - Jigsaw is a prospecting tool used by sales professionals, marketers and recruiters to get fresh and accurate sales leads and business contact information.

[Hoovers](#) - Search over 85 million companies within 900 industry segments; Hoover's Reports Easy-to-read reports on key competitors, financials, and executives

[Market Visual](#) - Search Professionals by Name, Company or Title

[FoxOne Scanner](#) - Non- Invasive and Non-Detectable WebServer Reconnaissance Scanner

[Creepy](#) - creepy is an application that allows you to gather geolocation related information about users from social networking platforms and image hosting services.

[Recorded Future](#) - Recorded Future intelligence analysis tools help analysts understand trends in

big data, and foresee what may happen in the future. Groundbreaking algorithms extract temporal and predictive signals from unstructured text. Recorded Future organizes this information, delineates results over interactive timelines, visualizes past trends, and maps future events— all while providing traceability back to sources. From OSINT to classified data, Recorded Future offers innovative, massively scalable solutions.

[MobiStealth](#) - Mobistealth Cell Phone Spy Software empowers you to get the answers you truly want and deserve. Including a host of advanced surveillance features, our Cell Phone Spy Software secretly monitors all cell phone activities and sends the information back to your Mobistealth user account.

[Snoopy](#) - Snoopy is a distributed tracking and profiling framework

[Stalker](#) - STALKER is a tool to reconstruct all captured traffic (wired or wireless alike) and parse out all of the “interesting” information disclosures. It goes beyond just grabbing passwords and emails out of the air as it attempts to build a complete profile of your target(s). You would be amazed at how much data you can collect in 15 minutes.

[LinkedIn Maps](#) - Your professional world. Visualized. Map your professional network to understand the relationships between you and your connections

[LittleSis](#) - LittleSis is a free database of who-knows-who at the heights of business and government.

[Entity Cube](#) - EntityCube is a research prototype for exploring object-level search technologies, which automatically summarizes the Web for entities (such as people, locations and organizations) with a modest web presence.

[TinEye](#) - TinEye is a reverse image search engine built by Idée currently in beta. Give it an image and it will tell you where the image appears on the web.

[Google Hacking DB](#) - Google Search Query Fu to find the secret sauce

[ServerSniff](#) - ServerSniff.net – Your free “Swiss Army Knife” for networking, serverchecks and routing with many many little toys and tools for administrators, webmasters, developers, powerusers und security-aware users.

[MyIPNeighbours](#) - My IP Neighbors lets you find out if any other web sites ("virtual hosts") are hosted on a given web server.

[Social Mention](#) - Social Mention is a social media search engine that searches user-generated content such as blogs, comments, bookmarks, events, news, videos, and more  
[Glass Door](#) - Search jobs then look inside. Company salaries, reviews, interview questions, and more – all posted anonymously by employees and job seekers.

[NameCHK](#) - Check to see if your desired username or vanity url is still available at dozens of popular Social Networking and Social Bookmarking websites.

[Scythe](#) - The ability to test a range of email addresses (or account names) across a range of websites (e.g. social media, blogging platforms, etc...) to find where those "targets" have active accounts.

[Recon-NG](#) – A nice Python Script that automates recon on LinkedIn, Jigsaw, Shodan and some search engine fu.

[Pushpin](#) – Awesome little Python script that will identify every tweet, flicker pic and Youtube video within an area of a specific Geo address.

[Silobreaker](#) – Enterprise Semantic Search Engine, allows virtualisation of data, analytics and exploration of key data.

[Google Trends](#) – See what are the popular related topics people are searching for. This will help widen your search scope.

[Google Alerts](#) - Google Alerts are email updates of the latest relevant Google results (web, news, etc.) based on your queries.

[Addict-o-matic](#) – Nice little search aggregator. Allows you to enter a search term and build a page from search and social networking sites.

[PasteLert](#) - PasteLert is a simple system to search pastebin.com and set up alerts (like google alerts) for pastebin.com entries. This means you will automatically receive email whenever your term(s) is/are found in new pastebin entries!

[CheckUsernames](#) - Check for usernames across 160 Social Networking Sites.

[Whos Talkin](#) - social media search tool that allows users to search for conversations surrounding the topics that they care about most.

[192](#) - Search for People, Businesses and Places in the UK.

[TouchGraph SEO](#) – Java based tool for importing and visualising various data types.

The idea with this training course is to help students understand how to gain intelligence on people or organizations using Internet based open source intelligence. Although the course is presented by Paterva the course does not center just on Maltego technology. The training course focuses on the underlying technology and techniques and tries to give students insight in how the tool collects and correlates the information.	<a href="http://www.paterva.com/web4/index.php/services">http://www.paterva.com/web4/index.php/services</a>

### ***OSINT Exploitation and The Criminal Threat***

First off let me state that no self respecting criminal would be without a wireless connection and all the apps that go with it.

This section is devoted to technology that is very easily exploitable by criminals. I use the word “criminal” as an umbrella term for anything from gangs to terrorists, human/drug/weapon smugglers to burglars, and anything in between. In other words, it is all-encompassing. It is not difficult to think like a criminal; all of us have at some point thought about doing something cruel. But for the most part we do not carry out our thoughts into action because we are law abiding citizens and we are rational people. Think about the time when a neighbor, a friend, girlfriend, boyfriend, or relative did something to displease us. Human nature, and psychology, says get even and do something back. But again, we are rational people. What I am trying to drive here is the point that all of us are capable of evil thought and it does not matter who we are. We just don’t admit to it. Remember Jimmy Carter and lust; not necessarily evil though. How about Bill Clinton and “I did not inhale”. They admitted to things in the hope that by doing this they would get positive results but instead those innocent comments came back to haunt them and they became the butt end of jokes. So, go ahead! Think like a human or drug smuggler. Think like a terrorist. Think like a gang banger. Think like a drug cartel boss. But most of all think! How can I exploit technology to further my criminal enterprise? By doing this brand of thinking you help law enforcement counter the threat whatever it may be or at least make them aware of the type of countermeasures to employ.

Why is it that most of the OSINT discussions are held behind firewalls and there is a requirement for passwords to access the subject? No, enough! I am going out on a limb and invite all to it. What a contradiction in terms. Open source but yet very hush, hush. We are not fooling anyone. Even criminals know how to exploit open source information and create intelligence from it. When I told a good friend of mine of what I intended to do, this is what he had to say. “We are not dealing with ignorant or stupid people. These people come from our professions, the computer industry, are computer engineers, etc. If you check open source you will see the bad guys asking for people with these skills. Not putting the information out in the open or in a book because the bad guys will find out and use it is only for those that

are new to the game, do not understand the criminal element or their MO. In addition not having this information will hinder us as the new people to the game may not even know we know... Bad guys leave trails when they get sloppy and they do."

**Personal Drones:** When and where does it end? That is, making it easier for the enemy. Let's go beyond celebrity stalking and spying on your neighbors. Drug Cartels, human and drug smugglers are always on the lookout for anything that will make their activities more successful. Let's role play: I am a smuggler (humans or drugs) and I have lookouts on high hills overlooking the border fence reporting activities back to me, however, they are static and cannot maneuver from their high points. I can utilize drones to hover over the fence/border for 360 degree coverage. I can see where the Border Patrol vehicle is on the other side of the fence; something my lookout even on a high point cannot observe. I can also determine how long it takes for the patrol to make a round of the area. What else can I make out? What they look like and now I can make contact with them when they are off duty for possible bribery. The options are without limits. I have millions at my disposal. I will buy several for the kids along the border to enjoy flying while I interleave my own surveillance drone into the mix. I could also land mine on the other side to lay in wait and observe. Granted the batteries do not last long but I don't need that much downtime. As soon as I observe what I need, I can bring my craft back over the fence and send another to lie in wait or do other types of collection. I can hire techies and have them experiment with the drones to extend their range and battery life. Does it sound far fetched? I don't think so.

#### **Smartphone Applications**

Now here are two apps no self respecting terrorist or smuggler should be without; Compass and GpsCompassMap. My intentions are not of sounding heartless or to delve into the macabre but rather to point out the control criminals obtain with this technology. The following examples deal mostly with Google Earth and how it has been utilized by terrorists. With the newer applications one does not need the desktop or laptop computer but a simple smartphone with all the bells and whistles of a regular CPU. The other advantage is that you do not leave as large an electronic footprint. The smartphone GPS is turned on as needed to avoid detection. There are other ways also.

No doubt you have heard or read about Iraqi insurgents having Google Earth imagery of British military bases (<http://news.nationalgeographic.com/news/2007/03/070312-google-censor.html>).

There are indications that the gunmen who stormed Mumbai on November 26, and the people who trained them, were technically literate. The group appears to have used complex GPS systems to navigate their way to Mumbai by sea. They communicated by satellite phone, used mobile phones with

several different SIM cards, and may have monitored events as the siege unfolded via handheld Blackberry web browsers ([http://technology.timesonline.co.uk/tol/news/tech\\_and\\_web/the\\_web/article5311241.ece](http://technology.timesonline.co.uk/tol/news/tech_and_web/the_web/article5311241.ece)). Israel's fears in regards to Google Earth's satellite imaging tools have come to fruition. Members of Palestine's al-Aqsa Martyrs Brigade, a group aligned with the Fatah political party, has admitted to using Google Earth for mapping targets for rocket strikes. Khaled Jaabari, the group's commander, has said that they are using Google Earth images to check details against their own maps in order to find sensitive areas that are vulnerable to strikes (<http://mashable.com/2007/10/25/missile-attacks-israel-google-earth/>).

**Compass** – I have tried this one and although still a little quirky it gives GR8 results. I can just begin to imagine the ways a criminal can put this technology to use. It is accurate when it comes to the coordinates and addresses. I cross referenced it with Google Earth, also on my smartphone, and it is right on. Using those two in concert give excellent results. Very handy for a criminal away from built up areas where all they want are coordinates that can be saved and returned to at a later date. I think you get my implication here.

**GpsCompassMap** – Another great little app. Combine Google Earth, Compass and this one and you have some power at your disposal. This one could replace Compass altogether but the more apps to cross check for accuracy, the better. Criminals are sure to fall in love with this one. It is extremely accurate. Went home for lunch and adjusted all the settings for the round-trip. It tells how many satellites are available and the number it is taking advantage of. Speed (miles, kilometers, knots, etc) of vehicle is very accurate as I compared it to my speedometer. As you leave the departure point the screen adjusts to show the entire track and at the end shows distance traveled. Geo coordinates which change according to location are a great feature. Superb tool for smugglers on the Southwest (Arizona/Mexico) Border, but that's as far as I go with how to use it.

**Untraceable Encrypted Blackberrys** - Mexico has no reliable register of handsets, mobile numbers, or users. Vendors are unregistered and sell the phones and SIM cards for cash, no questions asked. In other words, the cartels have nothing to worry about until such a time that Mexico makes strides to establish an official registry. (<http://www.theage.com.au/national/bikies-trafficking-in-data-secrecy-using-mexican-blackberrys-20110205-1aht9.html>)

## ***Open Source Software***

(necessary for the sharing of all forms of information)

## ***Operations Security (OPSEC)***

OPSEC Awareness for Military Members, DoD Employees and Contractors (This is an interactive web-based course that provides OPSEC awareness for military members, government employees, contractors and dependents. The course provides information on the basic need to protect unclassified information about operations and personal information to ensure safe and successful operations and personal safety. The course includes a printable certificate which can serve as evidence that a student completed the course. When a student takes the course using this link, DSS will not maintain any record of that student by name or any personally identifiable information. If the student needs documentation that he or she has completed the course he or she will have to print the certificate

at the end of the course. ) The course may take a few minutes for the initial download on slow internet connections. This training will take approximately 45 minutes to complete.

<http://cdsetrain.dtic.mil/opsec/index.htm>

Government contractor Frazier-Masonry provides detailed photographs of some of their contract work. Clients include Navy SEALS, NCIS, Marine Corp Special Operations Command West, EOD and various other agencies in and around Southern California. The work of these mostly U.S. Navy agencies is highly sensitive and the release of such photos, which reveal location, building lay-out and structural nature is a serious violation of Operational Security(OPSEC). Posted on social networking site.

## **Propaganda (anti-U.S.)**

Camera/Iraq This site was active between 2004 and 2008 and it may still come in handy for research. Very much a propaganda site so read with caution.

[http://web.archive.org/web/\\*http://www.camerairaq.com/2004/05/doctored\\_photos.html](http://web.archive.org/web/*http://www.camerairaq.com/2004/05/doctored_photos.html)

## **Public Data On Sex Offenders**

The National Sex Offender Public Website (coordinated by the Department of Justice—enables every citizen to search the latest information from all 50 states, the District of Columbia, Puerto Rico, Guam, and numerous Indian tribes for the identity and location of known sex offenders. To run a search: Enter the site, select the "I agree" button under Conditions of Use, fill out the Search form, and select "Search." You can also search registry websites maintained by individual jurisdictions by following the links below. Note: the information contained in the national registry and the state and tribal registries is identical; the national registry simply enables a search across multiple jurisdictions.)

<http://www.fbi.gov/scams-safety/registry>

### **States**

<a href="#">Alabama</a>	<a href="#">Louisiana</a>	<a href="#">Oklahoma</a>

## **Public Intelligence**

This site publishes documents that have been discovered through open source methods available to any member of the public. It includes U/FOUO, U/LES, U/FOUO/LES, and other classifications. However, with the recent release of documents by WikiLeaks and Edward Snowden I can understand how some may feel about releasing more sensitive material. I will not publish any of the material here but direct you to the site.

What is Public Intelligence? Public Intelligence is an international, collaborative research project aimed at aggregating the collective work of independent researchers around the globe who wish to defend the public's right to access information. We operate upon a single maxim: equal access to information is a human right. We believe that limits to the average citizen's ability to access information have created information asymmetries which threaten to destabilize democratic rule around the world. Through the control of information, governments, religions, corporations, and a select group of individuals have been able to manipulate public perception into accepting coercive agendas which are ultimately designed to limit the sovereignty and freedom of populations worldwide.

## ***Resources For Online Investigators (courtesy Toddington International)***

- <http://www.uvrx.com> - UVRX Social Search: Search social media sites, including Facebook, Twitter, MySpace and LinkedIn
- <http://www.keek.com> - The Twitter of video? Keek lets users send and watch short video clips with 111 character descriptions
- <http://www.lucidchart.com> - Collaborative flow chart maker with some potential for intelligence analysis
- <http://www.fixtracking.com> - "How-to stop getting tracked in your Browser" courtesy of <http://duckduckgo.com>
- <http://www.twitonomy.com> - Tool that allows real-time monitoring of Twitter conversations by keywords, users or lists
- <http://www.weknowwhatyouredoing.com> - Social network privacy experiment drawing public information from Facebook and Foursquare
- <http://www.tweetping.net> - Map display that shows global Twitter activity in real time. Fascinating.
- <http://www.netcomber.com> - Interesting site finding non-obvious relationships that may link various websites to a common owner
- <http://www.worldbrainthefilm.com> - "Google and the World Brain", an upcoming documentary on Google's efforts to scan the world's books
- <http://www.downrightnow.com> - Status alerts for various web services generated via user reports and official announcements
- <http://www.giphy.com> - Search engine for animated GIFs
- <http://www.base-search.net> - Bielefeld Academic Search Engine, searches more than 40 million documents from over 2,400 sources
- [http://www.nirsoft.net/utils/wireless\\_network\\_watcher.html](http://www.nirsoft.net/utils/wireless_network_watcher.html) - Wireless Network Watcher, free utility that displays computers & devices connected to your WiFi network
- <http://www.allmytweets.net> - Enter a user name and get that account holder's last 3,200 tweets all on one page
- <http://www.veooz.com> - Free sentiment analysis tool that pulls data from various social media platforms
- <http://www.safestyle-windows.co.uk/secret-door/> - Takes you to random places around the world via Street View (careful, this can be addictive)
- <http://www.coccoc.com> - Search engine specific to Vietnam, indexing some 2 billion in-country pages
- <http://www.answerpot.com> - Comprehensive and searchable mailing list archive
- <http://www.here.com> - Mapping site (and app) from Nokia that effectively competes with Google Maps
- <http://www.picsearch.com> - Image search site with an index of some 3 billion pictures
- <http://www.privacyfix.com> - PrivacyFix for Firefox lets you control your online privacy by "calculating" your online exposure
- <http://www.twocation.com> - Site that lets you see the geographic locations of your Twitter followers

<http://www.mind42.com> - Collaborative, browser-based online mind mapping tool  
<http://www.readnotify.com> - Free tool for tracking when an email or document is sent, received, opened or forwarded  
<http://www.werelate.org> - Locate individuals and their relatives on WeRelate, "the world's largest genealogy wiki"  
<http://www.encryptur.com> - Ensure your online files are protected with this online file encryption tool  
<http://www.digitalquick.com> - New Dropbox encryption service providing US government standard encryption - <http://goo.gl/Hb8QV>  
<http://www.tools.meraki.com/stumbler> - View your wifi network neighbourhood (including channels & MAC addresses) using this free web-based tool  
<http://www.kurrently.com> - Search social media networks for real-time results and monitor live events  
<http://www.whostalkin.com> - Find out what topics are relevant and trending on social media with this conversation search tool  
<http://www.recordedfuture.com> - Collects, organizes, and analyzes web-based info to allow for future predictions and insights  
<http://www.keotag.com> - Search for tags in social bookmarking and blog sites with this simple-to-use search engine  
<http://www.silobreaker.com> - "Must have" search engine for searching, aggregating and analyzing pertinent open source intelligence  
<http://www.mamma.com> - Meta search tool, "the mother of all search engines", generating results from leading search engines  
<http://www.visibletweets.com> - Twitter search tool for viewing tweets relating to keywords in a uniquely visualized format  
<http://www.groowe.com> - Search Google, Yahoo, Bing, Ask and other search engines right from your browser's toolbar  
<http://www.statigr.am> - Search for users, tags and pictures on Instagram with search tool Statigram  
<http://www.jolicloud.com> - Jolidrive allows you to access all of your online data in one place from your browser  
<http://www.my-ip-neighbors.com> - Determine if any other websites are hosted on a specific web server  
<http://www.social-searcher.com> - Facebook, Google+, Twitter, MySpace and LinkedIn search tool  
<http://www.socialseek.com> - Social media monitoring tool that allows you to search tweets, videos, news and blogs  
<http://www.skipease.com> - People search portal with social media and public record search engines all in one place  
<http://www.trendsmap.com> - Worldwide, real-time Twitter trends map, searchable by topic or location  
<http://www.backtweets.com> - "Twitter time machine" for searching previously tweeted URLs  
<http://www.flickriver.co> - Flickr viewer and search tool, searchable by user, tag, group and place

Russia and Central Asia <http://www.cfr.org/region/russia-and-central-asia/ri168>

Leksika (We aim for clarity of expression and a command of the subject matter to instill confidence in your conclusions. We merge what you already see in today's news with what awaits for tomorrow's. Our goal is to connect the dots and create the space to think critically about the available facts so that what you read is more than information, it is intelligence. Using the lexicon of professional intelligence analysis we harvest insights on Russia and Eurasia. This is to provide professionals with an understanding of current events and a new and worthwhile analytic approach to meaningful developments.) <http://www.leksika.org/>

RUSSIAN ANALYTICAL DIGEST (The Russian Analytical Digest (RAD) is a bi-weekly internet publication produced by three partners -- the Research Centre for East European Studies at the University of Bremen, the Center for Security Studies (CSS) at the Swiss Federal Institute of Technology Zurich (ETH Zurich), and the Institute of History at the University of Basel. In terms of content, the RAD covers ongoing political, economic, and social developments in Russia and its regions. It also looks at Russia's role in international relations. (Note: The Digest is supported by the Otto Wolff Foundation and the German Association for East European Studies [DGO].) If you would like to subscribe to the Russian Analytical Digest you can do so [here](#).)

## Satellite and Space Views (real time)

**Positions of Satellites Around Earth** This collection by [Analytic Graphics Inc.](#) shows real-time (updated every 30 seconds) positions of 13,000 satellites around the Earth. The positions come from a government-sponsored database which shows all satellites. You get the idea that our near-earth space is getting kind of cluttered don't you? Read about [space debris](#). Read more about this collection in the [GEB post](#).

UVRX (Search social media sites, including Facebook, Twitter, MySpace and LinkedIn)

<http://www.uvrx.com/>

Uvrx.com is dedicated to providing the most comprehensive online file storage search engine, and we will continue updating and improving it as often as possible. We hope you find our service useful and that it meets your needs. Currently we have individual search engines for badongo.com, mediafire.com, zshare.net, 4shared.com and taringa.net. We also provide a "Search all" search engine that will search filefactory, depositfiles, easy-share, sharedzilla, gigasize, divshare, sendspace, yousendit, Badongo, , Mediafire, Zshare, 4shared, letitbit, drop, filesurf, hotshare, usaupload, savefile, bigupload, upfile, hyperfileshare, zippyshare, uploaded.to, uploading, sharebee, rapidspread, Taringa and many more with each search query. Please keep in mind that we provide this free service as a convenient and easy way for you to find files that are shared by their rightful owners. This service is not intended to be used as a way of finding illegal or pirated content.

Webbrain (results in tree structure)	<a href="http://www.webbrain.com/html/default_win.html">http://www.webbrain.com/html/default_win.html</a>
ChaCha	<a href="http://www.chacha.com/">http://www.chacha.com/</a>

Dog Pile <http://www.dogpile.com/>

Zuula (takes advantage of 16 search engines) <http://www.zuula.com/>

Planetsearch (takes advantage of 16 search engines) <http://www.planetsearch.com/>

GoshMe (You may not know but there are more than half a million search engines out there on the Internet, with exclusive content and features. GoshMe will be the way to discover them, and even better, the key to know when and how to use them.) <http://www.goshme.com/login.jsp>

Yahoo Short Cur Cheat Sheets <http://help.yahoo.com/help/us/ysearch/tips/tips-01.html>

WayBack Machine (Browse through over 150 billion web pages archived from 1996 to a few months ago. To start surfing the Wayback, type in the web address of a site or page where you would like to start, and press enter. Then select from the archived dates available. The resulting pages point to other archived pages at as close a date as possible. Keyword searching is not currently supported.) *Note: If you find some links in this handout that no longer work you can get some practice with this site. Copy and paste the URL that is no longer active into the wayback machine. This should take you back to how the web page existed. Then by using keywords it's possible you may be able to reach the new site with new and updated content.* <http://www.archive.org/web/web.php>

Search Engine For Arabic Speakers <http://www.ayna.com/>

SearchMash <http://www.searchmash.com/>

CrossEngine <http://www.crossengine.com/>

Factbites (A search engine that is calibrated for searchers rather than for surfers. I don't want to find the hottest web site about Britney Spears; I want information on best practices for call centers, or background on the California mortgage industry.) <http://www фактбайтс.ком>

Intelways (Intelways.com, formerly CrossEngine and before that, mrSAPO, isn't a metasearch engine; you type in your query and then select which search engine to use. Intelways provides one-click access to around 300 different search tools, organised by broad channels.) <http://www.intelways.com/>

Goshme <http://beta3.goshme.com/>

Taya It (Arabic) Tayait offers their users the ability to search in the following language modes:

Morphological Search: Results include all inflections of the keyword. Expanded Search: Results include all derivatives of the keyword. Synonyms (Thesaurus): Return all synonyms and dialectical variants.

Cross Language: The ability to input English words to search through Arabic Documents Phrase: The ability to link multiple keywords more loosely or tightly. <http://www.tayait.com/>

YamLi (Arabic) <http://www.yamli.com/>

Ayna (Arabic) <http://www.ayna.com/>

Araby (Arabic) <http://www.araby.com/>

Le Moteur (French) <http://lemoteur.orange.fr/>

Carrot Clustering Engine An open source search-results-clustering engine, just recently out in beta. In a nutshell, it takes search results, analyzes them and, on the fly, creates groups of the most common concepts or terms from those results. Since this is all done by algorithms rather than by humans, expect the odd result every once in a while. (BatesInformation Services, [www.BatesInfo.com/tip.html](http://www.BatesInfo.com/tip.html)) <http://demo.carrot2.org/demo-stable/main>

Tianamo has developed a visually search engine that represents your search results as a terrain map. You decide if it has utility. <http://search.tianamo.com/index2.php>

## ***Social Engineering***

Social engineering is the act of manipulating people into performing actions or divulging confidential information. The term typically applies to trickery or deception for the purpose of information gathering, fraud, or computer system access; in most cases the attacker never comes face-to-face with the victim.

Social Engineering Fundamentals, Part I: Hacker Tactics

Social Engineering Fundamentals, Part II: Combat Strategies  
<http://www.symantec.com/connect/articles/social-engineering-fundamentals-part-ii-combat-strategies>

## ***Social Networking***

Social networking sites can be especially useful for the analyst. Many of the sites are used by terrorists, gangs, criminals and others with less than honorable intentions. Careful analysis of these open source worlds can yield intelligence you never knew existed. Like a jigsaw puzzle, you may have to visit several sites (as the enemy does to post bits and pieces of information so as to not leave a trail) to bring it all together. This is the heart of analysis: bringing it all together to monitor the beat.

20 Free Social Media Monitoring Tools You Should be Using <http://smallbiztrends.com/2012/09/20-free-social-media-monitoring-tools.html>

1. [Hootsuite](#)

Hootsuite is a web-based dashboard that allows you to monitor multiple social networks in one place. You can collaborate with fellow employees, schedule messages, and assign tasks to your team. It's particularly great for managing multiple accounts on the same platform. This is one of my personal favorites.

2. [Klout](#)

Klout provides an influencer score based on your social media activity. Your Klout score is determined using over 400 variables. In addition to working on your own Klout score, you can look at your influences and who you influence to regularly share content that is of the highest quality from trusted sources.

3. [TweetReach](#)

Who is reading your tweets? How is it being shared? What is the measured impact of what you're putting out there? TweetReach is a social analytics tool that helps you capture this valuable information.

4. [TwentyFeet](#)

TwentyFeet aggregates your activity from various social media platforms so you can get the full picture of your online presence. Then, you can determine which of your activities are most valuable.

5. [Twitalyzer](#)

Measure your impact, engagement, and influence on Twitter with this tool. They offer three plans, depending on your needs, Individual, Business and Agency, all at a very reasonable price. They do offer their

three most popular reports for free, so just connect your Twitter account and start Twitalyzing.

6. [PeerIndex](#)

Use this tool to determine your online authority and who your online brand advocates are. Learn which topics are best for you to focus on and who to connect with to spread the word.

7. [Facebook Insights](#)

This dashboard gives you all of the analytics data related to your Facebook page so that you can track growth and impact. Use the Insights to better understand your followers and reach the right audience.

8. [SocialMention](#)

Track and measure who is talking about you, your company, your product, or any topic related to your industry. SocialMention pulls data from hundreds of social media services to give you the most accurate, real-time information.

9. [SocialPointer](#)

This tool allows you to track and monitor social mentions and respond in real-time. Find potential customers, listen to what your competitors are saying, and get immediate feedback about your business.

10. [SocialBro](#)

Manage and analyze your Twitter account with SocialBro. This tool gives you detailed information about your Twitter community so that you can interact with followers more efficiently and garner the best results.

11. [FollowerWonk](#)

This Twitter analytics service, now owned by SEOMoz, allows you to understand and sort your followers. Learn when your influential followers are most active so that you can select the best times to engage your community and to ensure you're reaching the right people at the right time.

12. [HowSociable](#)

Measure your brand's impact online with this tool that provides you with a magnitude score. The score analyzes your level of activity online so that you can determine whether you have enough of a presence.

13. [Seesmic](#)

Manage all of your business' social media accounts in one place with Seesmic. Quickly view and respond to social activity in real-time even from your mobile devices.

14. [Engag.io](#)

This is a great tool for managing your conversations on social networks. Engag.io provides you with valuable insights into the people you are talking to via social media and also gives you a place to track whether or not you've responded.

15. [TweetDeck](#)

Arrange feeds from all of your social networks in one place using the TweetDeck dashboard. You can also schedule tweets and set-up customizable feeds for your social search needs.

16. [Brand Monitor](#)

Track your brand across numerous social media sites. Find where conversations relevant to your business are taking place so that you

can start becoming an active social media participant. Learn trending keywords and measure conversation engagement to help bring more valuable brand content to social media platforms.

#### 17. [Kred](#)

Similar to Klout, Kred mines social data to give you a Kred score. The score is a combination of your influence and your outreach activity. Kred measures how often you tweet or post, how people interact with you, and the growth of your audience. Kred gives you a detailed breakdown of your score so that you know exactly where you should

improve and the areas in social that are working well for your company.

#### 18. [Google Analytics Social Reports](#)

Nicely integrated into your Google Analytics platform, Social Reports helps measure how social traffic is directly impacting your conversions. Using an overview of your social networks, this tool allows you to visualize your social traffic so that you know where your time is best spent in the social world.

#### 19. [TwitterCounter](#)

TwitterCounter tracks Twitter users to give you statistics and usage information for your account. This service offers a very basic free

package with graphical data, but you can pay a bit more for access to an account comparison feature, more updates, report exports, and more.

#### 20. [Topsy](#)

This is a real-time social search engine. Sort through the latest social activity related to your industry, brand, or community and apply that knowledge to future business decisions.

There's a lot of overlap in the services these social media monitoring tools provide. It's most important that you find the tool that aligns with your business needs and personal preferences.

## Software/Tools For The Open Source Analyst

MakeUseOf (I include this site under this section because the analyst can probably make use of some of the free books available here.)  
<http://www.makeuseof.com/>

Free and Open-source Social Network Analysis Software

[GraphChi](#) can run very large graph computations on just a single machine, by using a novel algorithm for processing the graph from disk (SSD or hard drive).

[Graphviz](#), open source graph visualization software.

[JUNG](#), the Java Universal Network/Graph Framework, a software library for the modeling, analysis, and visualization of network data.

[libsna](#), Python open-source library for Social Network Analysis.

[Maltego Community Edition](#), an open source intelligence and forensics application; allows you to identify key relationships and networks. Commercial edition available.

[NETINF](#), infers a who-copies-from-whom or who-repeats-after-whom network of news media sites and blogs using the MemeTracker dataset.

[Network Workbench](#): a large-scale network analysis, modeling and visualization toolkit for biomedical, social science and physics Research.

**Visualization software: commercial**

<http://www.kdnuggets.com/software/social-network-analysis.html#free>

[Advizor Analyst](#), interactive data visualization for business

[Antaeus](#), data visualization based on the idea of a virtual scatter plot matrix (free for non-commercial use).

[Augify](#), cloud-based platform for real-time meaning and visualization.

[bi-drilllet](#), web-based tool which animates tabular data; presents a "slice" of a "cube" as a 2D bar graph and animates a "dimension".

[Networkx](#), Python package for the creation, manipulation, and study of the structure, dynamics, and functions of complex networks.

[Pajek](#), program for Large Network Analysis.

[R](#), includes several packages relevant for social network analysis:[igraph](#): generic network analysis package; [sna](#): for sociometric analysis of networks; [network](#) manipulates and displays network objects.

[Social Networks Visualiser \(SocNetV\)](#), a flexible and user-friendly tool for the analysis and visualisation of Social Networks.

[Subdue](#), graph-based knowledge discovery system that finds structural, relational patterns in data representing entities and relationships.

[sna: R Tools for Social Network Analysis](#), including node and graph-level indices, structural distance and covariance methods, structural equivalence detection, and more.

[statnet](#), a suite of R packages for social network analysis, simulation and visualization.

[Tulip](#), an information visualization framework dedicated to the analysis and visualization of relational data (free).

[Centrifuge Systems](#), supports open ended Who, What, Where, Why and When questions, for rapid discovery of non-obvious relationships, anomalies, and more.

[CViz Cluster Visualization](#), for analyzing high-dimensional data in large, complex data sets.

[Daisy](#), a graphical analysis and interactive investigation program (available as OCX).

[Data Desk](#), provides interactive tools for exploratory data analysis and display

[DataMontage](#), Java graphing library for multivariate time-oriented data.

[Davisor Chart](#), a web charting and reporting J2EE™ component suite, designed for server-side use.  
[Drillet](#), interactive, online visual analysis of data in spreadsheet format by "drill down".  
[Eaagle visual text mining software](#), enables you to rapidly analyze large volumes of unstructured text, create reports and easily communicate your findings.  
[Grapheur 2.0](#), data mining and interactive visualization tool (free trial).  
[GraphInsight](#), explore your graphs through high-quality 2D and 3D visualizations.  
[Gsharp](#), on-line and batch environment for business graphics  
[High Tower TowerView](#) presents huge quantities of data (up to 10,000 different parameters) in a three-dimensional graphical environment.  
[i2 Analyst's Workstation](#), i2 Inc. software for volume incident analysis; used worldwide to support intelligence-led policing, COMSTAT processes, anti-terrorism/force protection and more.

[IBM ILOG Visualization](#), a comprehensive set of graphics products for creating highly graphical, interactive displays.  
[IDL](#), the Interactive Data Language, enables in-depth data analysis through industry-leading visualization  
[InetSoft Style Intelligence](#), visualization-driven operational business intelligence platform for dashboards and data mashups.  
[InetSoft Style Scope](#), real-time web-based visual data analysis and dashboard application with drag and drop designer.  
[InFlow Network Mapping Software](#)  
[InfoZoom](#), an easy to use visual data analysis tool that works with multiple databases without SQL-querying.  
[InstantAtlas™](#), improves the visual communication of location-based statistical data, with reporting solutions that combine statistics and map data.  
[IRIS Explorer](#), advanced visual programming environment for 3-D data visualization, animation and manipulation  
[JMP](#), offers significant visualization and data mining capabilities along with classical statistical analyses.  
[K.wiz](#), provides a range of Java visualization components including heatmaps, decision trees, 3D scatter plots and association rules.  
[LeadScope](#), provides specialized data mining and visualization software for the pharmaceutical industry.  
[Mercury Visualization Sciences Group](#), offering high-end 3D visualization software tools for scientific and industrial applications.  
[Miner3D](#), data visualization technology with Dynamic Filters, PCA, K-means and other powerful methods enabling advanced visual data analysis in business and science.  
[NETMAP](#), innovative combination of link analysis and data visualization, with applications to fraud detection and claims analysis.  
[NovoSpark Visualizer](#), multidimensional data visualization tool for analysis of static and dynamic data, available in commercial and free (on-line) versions.

[Oculus](#), offering many unique and custom software solutions for business visualization.  
[Office Advisor](#), interactive data visualization software for individual analysis.  
[OpenViz](#), visualization components (both ActiveX and Java)  
[Panopticon](#), data visualization tools optimized for monitoring and analysis of real-time data, with an in-memory OLAP data model and ability connect to virtually any data source.  
[Parallax: Multi-Dimensional Graphs](#), software for visualization and classification by Alfred Inselberg, inventor of parallel coordinates method.  
[Partek](#) interactive data analysis and visualization software for life sciences and engineering.  
[Polychart Embeddable](#), a charting tool that can be placed anywhere on the web.  
[PV-WAVE](#), array oriented fourth-generation programming language that enables users to rapidly import, manipulate, analyze and visualize data.  
[Quantum 4d](#), multi-user visualization, knowledge and insight platform; empowers experts and non-technical users to build, navigate, edit and explore n-dimensional universes of insight using a dynamic 3D interface.  
[Quadrigram](#), a platform for creating customized data visualizations, with a flexible visual language and many visualization templates.  
[RapAnalyst](#) uses a combination of Neural Nets, Genetic algorithms, and SOM to visualize the knowledge and work with high dimensional data within the two-dimensional Knowledge Filter™.  
[SAP BusinessObjects Xcelsius Enterprise](#), a data visualization tool for interactive analytics and dashboards with secure, live connections to SAP BusinessObjects Enterprise and SAP BusinessObjects Edge.  
[SAP Business Objects Tools For Advanced Visualization: Startree, Tablelens, Timewall, and Vizserver](#), let you easily set up visual environments to explore extensive hierarchies and relationships in your applications, spot relationships and analyze trends in tabular data, and visualize long time horizons.  
[ScienceGL](#), professional software solutions for 3D/4D scientific visualization.  
[Sentinel Visualizer](#), with advanced social network analysis and visualization.  
[Spatial Key](#), a next generation Information Visualization, Mapping, Analysis and Reporting System.  
[Starlight Visual Information System \(VIS\)](#), from Future Point Systems, is a comprehensive visual analytics platform that transforms mountains of data into actionable intelligence.  
[Tableau](#), a visual spreadsheet for databases that allows you to visually explore, analyze and create reports.  
[TIBCO Spotfire](#), business class visualization platform.  
[Treparel KMX Text Analytics Visualization](#) platform includes landscaping of large documents sets, document similarity, precision and recall, frequency distribution and classification scores.  
[Discovery](#), intuitive visual representation, exploration, and modeling of complex data distributions, based on Self-Organizing Maps and classical statistics.

[Visipoint](#), Self-Organizing Map clustering and visualization.

[Visokio Omniscope](#), desktop data discovery tool for interactive data visualization and publishing, including FeatureFinder for make and maintain DataPlayers especially for the web and desktop.

[Visual Insights](#) offers a comprehensive array of packaged and custom software solutions to help track and analyze eBusiness performance

[Visual Ilo](#), provides cloud-based, enterprise class immersive business analytics and visualization solutions.

#### Visualization software: free

<http://www.kdnuggets.com/software/social-network-analysis.html#free>

[Antaeus](#), data visualization based on the idea of a virtual scatter plot matrix (free for non-commercial use).

[d3.js: Data-Driven Documents](#), a JavaScript library for manipulating and visualizing HTML documents based on data.

[Databionic ESOM Tools](#), a suite of programs for clustering, visualization, and classification with Emergent Self-Organizing Maps (ESOM).

[DataWrangler](#), an interactive tool for data cleaning and transformation from Stanford Visualization Group.

[Gephi](#), open-source, free interactive visualization and exploration platform for all kinds of networks and complex systems, dynamic and hierarchical graphs.

[GGobi](#), next edition of xgobi.

[Graf-FX](#), analyze Up to 8 Numerical Values and drilldown to 5 levels of detail. View your data in a variety of 2D or 3D graphs and queries. Interfaces with Access 95, 97, 2000

[Graphviz](#), open source graph visualization software.

[IBM OpenDX: Open Visualization Data Explorer](#), visualization framework for animating data.

[VisualLinks\(r\)](#), a platform-independent, graphical analysis tool used to discover patterns, trends, associations and hidden networks in any number and type of data sources.

[VisuMap](#), information visualization tools for high dimensional non-linear data.

[WITNESS Miner](#), a graphical data mining tool with decision trees, clustering, discretisation, feature subset selection, and more.

[Xanalyis Link Explorer](#), providing visualization by query to support intelligence-led investigations and finding missing links in investigative paths.

[InetSoft Dashboardfree: Style Scope Free Edition](#), a free downloadable web-based application for interactive Flash dashboards and visualizations.

[InetSoft Visualize Free](#), a free web-based visualization service for sifting through multi-dimensional data.

[JuiceKit™ from JuiceAnalytics](#), a Software Development Kit (SDK) for building visualizations and Information Experience™ applications.

[Tulip](#), an information visualization framework dedicated to the analysis and visualization of relational data (free).

[i\\_Visalix](#), a free web application for visual data analysis and clustering.

[VisDB](#), a Visual Data Mining and Database Exploration System, supporting Pixel-oriented Techniques (Spiral, Axes, and Grouping Techniques), Parallel Coordinates, and Stick Figures.

[Weave](#), a web-based visualization platform designed to enable visualization of any available data by anyone for any purpose.

[XDAT: X-dimensional Data Analysis Tool](#), reads high-dimensional data in column-based format and uses parallel-coordinates to visualize and analyse all dimensions at once.

[XGOBI](#), a data visualization system for viewing high-dimensional data

[XmdvTool](#), a public-domain software package for the interactive visual exploration of multivariate data sets.

Relavint Desktop (LexisNexis® Relavint™ Desktop is an easy-to-use visualization and drawing tool specifically designed for creating link analysis charts—visual relationships between individuals, addresses, vehicles, corporations, and other items.)

<http://www.accurint.com/relavintdesktop.html>

<http://www.paterva.com/web6/>

[Paterva](#)

[RFFlow 5](#) (a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web. )

<http://www.rff.com/>

[Lucidchart](#) (collaborative flow chart maker with some potential for intelligence analysis)

<https://www.lucidchart.com/>

[Earthpoint](#) - Excel To KML - Maps Excel worksheets onto Google Earth. Optional columns let you control balloon text, icon selection, mouse-over effects, and more. Supports Lat/Lon, UTM, UPS, MGRS, USNG, GEOREF, and State Plane coordinates. (Includes multiple other functions and features.)

<http://www.earthpoint.us/Default.aspx>

[Encryption Wizard \(EW\)](#) DoD Software Protection Initiative - EW is an SPC implementation of the Advanced Encryption Standard (AES) (Rijndael) augmented with a file manager Graphical User Interface (GUI) for ease of use. The 128-bit encryption/decryption algorithm used by Encryption Wizard is

considered cryptographically strong and is routinely used in National Security Agency (NSA) and National Institute of Standards and Technology (NIST) certified products. Encryption Wizard is designed to protect data at rest and in transit (such as email attachments). EW is an easy to use tool for protecting sensitive (but not classified) documents, and for protecting files before transmission via email. It allows a user to encrypt files using a 128-bit implementation of the Advanced Encryption Standard (AES) with simple drag-and-drop efficiency. Encryption Wizard can significantly increase an organization's security posture at little to no cost to protect sensitive data in transit (E-mail, FTP, or shared web folders) or at rest on a removable storage device.

<http://spi.dod.mil/ewizard.htm>

Epi Info 7 - Epi Info is a suite of free data management, analysis, and visualization tools designed specifically for the public health community. It is used extensively, not just at CDC, but also domestically at the state and local level, as well as internationally. Epi Info allows you to: Rapid Electronic Form Creation and Data Entry - Rapidly create electronic data entry forms; these forms can have intelligence built into them. For example, you can automatically calculate a patient's age based on the survey data date of birth; you can also move the cursor past certain fields; you can even hide and unhide fields based on various conditions. It also allows you to enter data into those forms. Statistical Analysis - You can conduct various types of statistical analysis, including frequencies, 2x2 (two by two) tables, analysis of variance, conditional and unconditional logistical regression, Kaplan Meier survival analysis, complex samples, and many others. Mapping and Visualization - Epi Info also allows you to create several types of maps, and also has graphing and charting capabilities. Report Design and Generation - And finally, Epi Info allows you to design and generate reports.

<http://www.cdc.gov/epiinfo/7/index.htm>

Mendeley - Mendeley is a free reference manager and academic social network that can help you organize your research, collaborate with others online, and discover the latest research.

- Automatically generate bibliographies
- Collaborate easily with other researchers online
- Easily import papers from other research software
- Find relevant papers based on what you're reading
- Access your papers from anywhere online

<http://www.mendeley.com/>

Microsoft Mathematics 4.0 - teachers/guides/Pages/Mathematics-guide.aspx - With the Mathematics 4.0 free download, you get a full-featured graphing calculator with a formulas and equations library, a triangle solver, a unit conversion tool, ink handwriting support, and more.

<https://www.microsoft.com/education/en-us/teachers/guides/Pages/Mathematics-guide.aspx>

Near Repeat Calculator - This software originates with the relatively recent discovery of the near repeat phenomenon in burglary patterns, a discovery that has highlighted the communicability of crime events that affect the risk level at nearby locations. The near repeat phenomenon states that if a location is the target of a crime (such as burglary), the homes within a relatively short distance have an increased chance of being burgled for a limited number of weeks (Townsley et al, 2003; Bowers and Johnson, 2004; Johnson and Bowers, 2004a, 2004b). This communicability of risk to nearby locations for a short amount of time raises the possibility that other crime types may also suffer from a near repeat spatiotemporal pattern of behavior. The analytical method employed builds on a space-time clustering methods first pioneered by Knox (1964) to study the epidemiology of childhood leukemia. The Knox test seeks to determine whether there are more event-pairs observed that occur with a closer proximity in space and time than would be expected on the basis of a random distribution. To do this, each shooting for a particular dataset is compared with every other and the spatial and temporal distance between them recorded. The result is a matrix of space-time distances.

<http://www.temple.edu/cj/misc/nr/>

Orange - Open source data visualization and analysis for novice and experts. Data mining through visual programming or Python scripting. Components for machine learning. Add-ons for bioinformatics and text mining, and data analytics.

<http://orange.biolab.si/>

Python Programming Language - Python is a remarkably powerful dynamic programming language that is used in a wide variety of application domains. Python is often compared to Tcl, Perl, Ruby, Scheme or Java. Some of its key distinguishing features include:

- very clear, readable syntax
- strong introspection capabilities
- intuitive object orientation
- natural expression of procedural code
- full modularity, supporting hierarchical packages
- exception-based error handling
- very high level dynamic data types
- extensive standard libraries and third party modules for virtually every task
- extensions and modules easily written in C, C++ (or Java for Jython, or .NET languages for IronPython)
- embeddable within applications as a scripting interface

<http://www.python.org/>

QiQqa - Essential software for PDF and research management

- Superior PDF management and reference management
- Unique tools to understand, discover and recall
- Annotate, tag, cite, cloud sync, OCR, and much more
- Free

<http://www.qiqqa.com/>

Quantum GIS - Quantum GIS (QGIS) is a user friendly Open Source Geographic Information System (GIS) licensed under the GNU General Public License. QGIS is an official project of the Open Source Geospatial Foundation (OSGeo). It runs on Linux, UNIX, Mac OSX, Windows and Android and supports numerous vector, raster, and database formats and functionalities. <http://www.qgis.org/>

Decision Analyst STATS 2.0- This easy-to use, Windows-based statistical software for marketing research performs multiple functions, including:

- Random numbers generator
- Sample size determination
- Mean, standard deviation, standard error, and range
- Standard error of a proportion
- Significance testing
- Correlation
- Cross-tabulation
- Factor analysis
- Multiple regression
- Cluster analysis

<http://www.decisionanalyst.com/download.aspx>

Squidmat – Decision analysis software. The program compares two or more courses of action based on two or more evaluation criteria. The user arranges the evaluation criteria in descending order of importance and tells the program how much more important each criterion is than the next lower criterion. These importance ratings are used to calculate weights for each criterion. SquidMat takes usersupplied values for each course-of-action/criterion combination and converts them to Z scores. Using the criterion weights, the program calculates weighted sums for each course of action. The course of action with the highest weighted sum is considered to be the best. SquidMat is designed as a replacement decision matrix program for the CAS3 program DECMAT.

<http://faculty.tamu-commerce.edu/jmstauffer/squidmat/squidmat.htm>

CrimeStat III - CrimeStat III is a spatial statistics program for the analysis of crime incident locations, developed by Ned Levine & Associates under the direction of Ned Levine, PhD, that was funded by grants from the National Institute of Justice. The program is Windows-based and interfaces with most desktop GIS programs. The purpose is to provide supplemental statistical tools to aid law

enforcement agencies and criminal justice researchers in their crime mapping efforts. CrimeStat is being used by many police departments around the country as well as by criminal justice and other researchers. The latest version is 3.3. The program inputs incident locations (e.g., robbery locations) in 'dbf', 'shp', ASCII or ODBC-compliant formats using either spherical or projected coordinates. It calculates various spatial statistics and writes graphical objects to ArcGIS®, MapInfo®, Surfer for Windows®, and other GIS packages.

<http://www.icpsr.umich.edu/CrimeStat/>

Significant Activities, abbreviated as SigActs, is a military term that refers to incidents occurring on a battlefield. In today's globalized economy, news and events transpiring around the world can have an impact on international supply chains and local public safety. SigActs.com is an attempt to identify and display the geographic relevance of news from around the globe.

<http://www.sigacts.com/endpoints/map/webapp/#>

Analysis of Competing Hypotheses Software -- Analysis of Competing Hypotheses (ACH) is a simple model for how to think about a complex problem when the available information is incomplete or ambiguous, as typically happens in intelligence analysis. The software downloadable here takes an analyst through a process for making a well-reasoned, analytical judgment. It is particularly useful for issues that require careful weighing of alternative explanations of what has happened, is happening, or is likely to happen in the future. It helps the analyst overcome, or at least minimize, some of the cognitive limitations that make prescient intelligence analysis so difficult. ACH is grounded in basic insights from cognitive psychology, decision analysis, and the scientific method. It helps analysts protect themselves from avoidable error, and improves their chances of making a correct judgment. This software was developed by Palo Alto Research Center (PARC) in collaboration with Richards J. Heuer, Jr. It was developed for use by the U.S. Intelligence Community with funding from the Intelligence Community's Advanced Research and Development Activity (ARDA) and the Office of Naval Research (ONR). In distributing ACH, PARC is making the presently downloadable version of the program available to the general public at no cost when used for non-commercial or educational purposes subject to the terms and conditions of its end user license.

<http://www2.parc.com/istl/projects/ach/ach.html>

CARVER2 - Target Analysis Software -- CARVER2, a free software tool that provides a non-technical method of comparing and ranking critical infrastructure and key resources. It is the only assessment tool that ranks critical infrastructure across sectors. The CARVER2 vulnerability assessment tool is designed to quickly and easily identify and compare potential natural disaster and/or terrorist targets at the local, state and national levels in order to assist government officials in the allocation of protective resources. The CARVER2 target analysis tool is available free of charge to federal, state, and local government officials and agencies, as well as non-profit and educational institutions.

<http://www.ni2cie.org/CARVER2.asp>

Computer Online Forensic Evidence Extractor -- Microsoft COFEE is being made available to individuals employed by law enforcement agencies within the United States and Canada. COFEE means the Computer Online Forensic Evidence Extractor tool that fits on a USB drive and automates the execution of commands for data extraction and related documentation. Distribution is limited to law enforcement agencies. Access to the COFEE product requires verification of employment with a law enforcement agency and agreement to the terms and conditions of the Microsoft/NW3C Sublicense Agreement. The verification process is automated if you have an email account with RISS.NET or LEO.GOV, or have an account with NW3C.

<https://cofee.nw3c.org/>

Computer Security Evaluation Tool -- The Department of Homeland Security (DHS) has released its latest cyber system assessment tool to the Critical Infrastructure/Key Resources (CI/KR) community. The Computer Security Evaluation Tool (CSET) is a desktop software tool that guides users through a step-by-step process to evaluate their cyber systems and network security practices against recognized industry standards. According to DHS, the benefits of CSET include:

- Contributing to an organization's risk management and decision-making process;
- Raising awareness and facilitating discussion on cyber security within the organization;
- Highlighting vulnerabilities in the organization's systems and providing recommendations on ways to address those vulnerabilities;
- Identifying areas of strength and best practices being followed in the organization;
- Providing a method to systematically compare and monitor improvement in the cyber systems; and
- Providing a common industry-wide tool for assessing cyber systems.

[http://www.us-cert.gov/control\\_systems/satool.html](http://www.us-cert.gov/control_systems/satool.html)

CrimeStat III -- CrimeStat III is a spatial statistics program for the analysis of crime incident locations, developed by Ned Levine & Associates under the direction of Ned Levine, PhD, that was funded by grants from the National Institute of Justice. The program is Windows-based and interfaces with most desktop GIS programs. The purpose is to provide supplemental statistical tools to aid law enforcement agencies and criminal justice researchers in their crime mapping efforts. CrimeStat is being used by many police departments around the country as well as by criminal justice and other researchers. The latest version is 3.3. The program inputs incident locations (e.g., robbery locations) in 'dbf', 'shp', ASCII or ODBC-compliant formats using either spherical or projected coordinates. It calculates various spatial statistics and writes graphical objects to ArcGIS®, MapInfo®, Surfer for Windows®, and other GIS packages.

<http://www.icpsr.umich.edu/CrimeStat/>

Comprehensive R Archive Network -- Comprehensive R Archive Network a freely available language and environment for statistical computing and graphics which provides a wide variety of statistical and graphical techniques: linear and nonlinear modelling, statistical tests, time series analysis, classification, clustering, etc.

<http://cran.r-project.org/>

Decrypto 8.5 -- Decrypto is a fast and automated cryptogram solver by Edwin Olson. It can decode word games often found in newspapers, including puzzles like cryptoquips and patristocrats. You can also download a stand-alone version. [We have also found this program useful for quickly breaking simple substitution ciphers used by some criminal gangs.]

<http://www.blisstonia.com/software/WebDecrypto/>

Encryption Wizard (EW) DoD Software Protection Initiative -- EW is an SPC implementation of the Advanced Encryption Standard (AES) (Rijndael) augmented with a file manager Graphical User Interface (GUI) for ease of use. The 128-bit encryption/decryption algorithm used by Encryption Wizard is considered cryptographically strong and is routinely used in National Security Agency (NSA) and National Institute of Standards and Technology (NIST) certified products. Encryption Wizard is designed to protect data at rest and in transit (such as email attachments). EW is an easy to use tool for protecting sensitive (but not classified) documents, and for protecting files before transmission via email. It allows a user to encrypt files using a 128-bit implementation of the Advanced Encryption Standard (AES) with simple drag-and-drop efficiency. Encryption Wizard can significantly increase an organization's security posture at little to no cost to protect sensitive data in transit (E-mail, FTP, or shared web folders) or at rest on a removable storage device. The primary version for government users utilizes a FIPS 140-2 validated encryption engine licensed from RSA

<http://spi.dod.mil/ewizard.htm>

Near Repeat Calculator -- This software originates with the relatively recent discovery of the near repeat phenomenon in burglary patterns, a discovery that has highlighted the communicability of crime events that affect the risk level at nearby locations. The near repeat phenomenon states that if a location is the target of a crime (such as burglary), the homes within a relatively short distance have an increased chance of being burgled for a limited number of weeks (Townsley et al, 2003; Bowers and Johnson, 2004; Johnson and Bowers, 2004a, 2004b). This communicability of risk to nearby locations for a short amount of time raises the possibility that other crime types may also suffer from a near repeat spatio-temporal pattern of behavior.

The analytical method employed builds on a space-time clustering methods first pioneered by Knox (1964) to study the epidemiology of childhood leukemia. The Knox test seeks to determine whether there are more event-pairs observed that occur with a closer proximity in space and time than would be expected on the basis of a random distribution. To do this, each shooting for a particular dataset is compared with every other and the spatial and temporal distance between them recorded. The result is a matrix of space-time distances.

To establish a null hypothesis measure against which to test the shooting patterns, we employ a Monte Carlo simulation process. By computing multiple simulations of the expected values, it is possible to generate an expected distribution under a null hypothesis – using the actual study data. This provides a unique way to examine what would occur if there were no near repeat patterns.

<http://www.temple.edu/cj/misc/nr/>

Problem Analysis Module -- Problem Analysis Module (PAM) gives you a framework for analyzing any persistent crime and public safety problem. PAM will ask you to input information concerning every aspect of the problem and then suggest the kinds of responses you could try. PAM was developed to assist police problem solving through the asking of specific questions. The questions come from research into a set of powerful theories within the field of Environmental Criminology – particularly Routine Activity Theory, Situational Crime Prevention, and Crime Pattern Theory.

<http://www.popcenter.org/learning/pam/>

RFFlow 5 -- RFFlow is a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web. RFFlow has the capability to generate crime analysis charts.

<http://www.rff.com/index.htm>  
[http://www.rff.com/sample\\_crime\\_analysis.htm](http://www.rff.com/sample_crime_analysis.htm)

RAIDS On-Line Public Crime Map -- BAIR's free public crime map, RAIDS Online, connects law enforcement with the community to reduce crime and improve public safety. RAIDS Online is absolutely free to law enforcement and the public! RAIDS On-line's public crime map works with any RMS to allow law enforcement to share crime data with the public through an easy-to-use online crime map and analytics dashboard. The data is displayed with 8 fields of limited offense information to protect victim privacy. This is a valuable tool for law enforcement to communicate crime activity to their citizens and the media.

<http://bairanalytics.com/raidsonline>

Squidmat (courses of action evaluation program) -- The program compares two or more courses of action based on two or more evaluation criteria. The user arranges the evaluation criteria in descending order of importance and tells the program how much more important each criterion is than the next lower criterion. These importance ratings are used to calculate weights for each criterion. SquidMat takes user-supplied values for each course-of-action/criterion combination and converts them to Z scores. Using the criterion weights, the program calculates weighted sums for each course of action. The course of action with the highest weighted sum is considered to be the best. SquidMat is designed as a replacement decision matrix program for the CAS3 program DECMAT.

Analyst Toolbox:A Toolbox For The Intelligence Analyst

[http://it.ojp.gov/documents/analyst\\_toolbox.pdf](http://it.ojp.gov/documents/analyst_toolbox.pdf)

22 Free Tools for Data Visualization and Analysis (There are many tools around to help turn data into graphics, but they can carry hefty price tags. The cost can make sense for professionals whose primary job is to find meaning in mountains of information, but you might not be able to justify such an expense if you or your users only need a graphics application from time to time, or if your budget for new tools is somewhat limited. If one of the higher-priced options is out of your reach, there are a surprising number of highly robust tools for data visualization and analysis that are available at no charge.)

8 more free tools for data visualization and analysis

[http://blogs.computerworld.com/18212/8\\_more\\_free\\_tools\\_for\\_data\\_visualization\\_and\\_analysis](http://blogs.computerworld.com/18212/8_more_free_tools_for_data_visualization_and_analysis)

GeoChat It is designed to enable self-organizing group communications by allowing users to link the field, headquarters, and the local community in a real-time, interactive conversation visualized on the surface of a map. GeoChat is a tool for group communications based on SMS, email, and Twitter. People use GeoChat to simplify team communications, logistics and data reporting, and they can extend their own software applications using the open APIs. GeoChat is a flexible open source group communications technology that lets team members interact to maintain shared geospatial awareness of who is doing what where — over any device, on any platform, over any network. GeoChat allows you and your team to stay in touch one another in a variety of ways: over SMS, over email, and on the surface of a map in a web browser. Whether you are sitting at a computer with a high-speed Internet connection, or on the go with your mobile phone, GeoChat lets you react to events on the ground with maximum agility, forming cross-organizational virtual teams on the fly, linking field to headquarters, and keeping everyone on your team connected, in sync, and aware of who is doing what, and where.

New Tools of Military Soft Power <http://www.nationaldefensemagazine.org/Pages/default.aspx>

Broadcast Television Tools to Help Intelligence Analysts Wade Through Data

<http://www.nationaldefensemagazine.org/Pages/default.aspx>

<http://www.nationaldefensemagazine.org/archive/2011/March/Pages/BroadcastTelevisionToolsToHelpIntelligenceAnalystsWadeThroughData.aspx>

Granted there are many units out there that do not have the budget to buy or subscribe to expensive analytical software, but this should not stop the analyst from doing his/her work. There are abundant resources of freebies that when used in conjunction with each other provide just as powerful analytical capabilities. I actually view this as a heavy **plus (+)**. When we use expensive commercial versions of analytical software that give instantaneous analysis/gratification we tend to depend too much on the outcome and in many cases take the results for granted. When we do this we cheat ourselves from doing our own critical thinking and critical analysis for good predictive analysis. However, by taking advantage of the free (or very cheap) community versions and using them together we force ourselves to do more critical thinking/analysis because we are trying to determine what information to input into one program based on the output of another program.

Recorded Future (scour the web, extract, analyze and rank, then explore the past, present and future.) <https://www.recordedfuture.com/>

IP Locator (Find an Internet user's geographic location without invading visitor's privacy)

IP Locator Object is a multiplatform API that will help you understand your visitors better by geographical location. IP Locator Object provides a wealth of information you can use to geotarget.

<http://www.melissadata.com/dqt/ip-locator.htm>

Sample Output using IP Locator Object

IP Address	216.231.3.166
Latitude	33.4774
Longitude	-117.705
ZIP	92624

Region	CALIFORNIA
Name	COX COMMUNICATIONS INC
Domain	COX.NET
City Name	DANA POINT
Country	UNITED STATES
Abbreviation	US

Google Goggles. You have to try this one and see for yourself. My mind wandered as I gave this one a spin. Suppose a drug cartel member is interviewed in a strange location, however, in the distance you are able to distinguish a building and.... What if you found a note at a terrorist location in a different language. The possibilities are endless. Google Goggles lets you search Google using pictures from your camera phones. We take an image as input, and using several image recognition backends (object recognition, place matching, OCR, etc), we return relevant search results.

<http://www.google.com/mobile/goggles/#text>

Google Squared. Google Squared is an experimental tool that takes a category (like US presidents, roller coasters, or digital cameras) and attempts to create a starter "square" of information, automatically fetching and organizing facts from across the web. You can modify your square by removing rows and columns you don't like--or by adding new rows and columns and having Google Squared attempt to fetch the relevant facts. Verify and correct the facts in your square by exploring the original sources and investigating other possible values. If you're happy with your square you can save it and come back to it later. Google Squared does the grunt work for you, making research fast and easy. I use this one often. You can then export the results into an excel spreadsheet that you can then modify to suit your needs. Using this one in conjunction with Google Squared helps fill in the blanks.

<http://www.google.com/squared>

Google News Timeline is a web application that organizes information chronologically. It allows users to view news and other data sources on a zoomable, graphical timeline. You can navigate through time by dragging the timeline, setting the "granularity" to weeks, months, years, or decades, or just including a time period in your query (ie. "1977"). I queried MS-13 and was amazed at the results. Went back to 1996 and was able to do some raw trend analysis. Did the same thing with "California Gangs". It will take patience. Available data sources include recent and historical news, scanned newspapers and magazines, blog posts and Twitter status messages, sports scores and various types of media like music albums and movies. Using this one in conjunction with Google Squared helps fill in the blanks.

<http://newstimeline.googlelabs.com/>

Maltego is an open source intelligence and forensics application. It will offer you timous mining and gathering of information as well as the representation of this information in a easy to understand format. Coupled with its graphing libraries, Maltego allows you to identify key relationships between information and identify previously unknown relationships between them. <http://www.paterva.com/web5/>

ORA is a dynamic meta-network assessment and analysis tool developed by CASOS at Carnegie Mellon. It contains hundreds of social network, dynamic network metrics, trail metrics, procedures for grouping nodes, identifying local patterns, comparing and contrasting networks, groups, and individuals from a dynamic meta-network perspective. \*ORA has been used to examine how networks change through space and time, contains procedures for moving back and forth between trail data (e.g. who was where when) and network data (who is connected to whom, who is connected to where ...), and has a variety of geo-spatial network metrics, and change detection techniques. \*ORA can handle multi-mode, multi-plex, multi-level networks. It can identify key players, groups and vulnerabilities, model network changes over time, and perform COA analysis. It has been tested with large networks (106 nodes per 5 entity classes). Distance based, algorithmic, and statistical procedures for comparing and contrasting networks are part of this toolkit.

<http://www.casos.cs.cmu.edu/projects/ora/>

Computational Models and Social Network Tools

[http://www.casos.cs.cmu.edu/computational\\_tools/tools.html](http://www.casos.cs.cmu.edu/computational_tools/tools.html)

RFFlow is a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web. 30 day free trial period; \$49.00 thereafter for individual. <http://rff.com/>

The Brain Simply type in your ideas. Drag and drop files and web pages. Any idea can be linked to anything else. Using your digital Brain is like cruising through a Web of your thinking. See new relationships. Discover connections. Go from the big picture of everything to a specific detail in seconds <http://www.thebrain.com/>

SPY (spy can listen in on the social media conversations you're interested in. What do you want to listen for?) <http://www.spy.appspot.com/>

Spokeo (not your grandmas phone book) <http://www.spokeo.com/>

Silobreaker (for those familiar with Analyst Notebook, I think you'll like this) <http://www.silobreaker.com/>

Evolution (It has applications in forensic investigations, law enforcement, **intelligence operations**, identity fraud, and identity verification processes). Download the free community edition. It is not as powerful as the commercial version, which is also very expensive, but has great utility when used in conjunction with other free sites like Silobreaker. <http://www.paterva.com/web2/>

A Periodic Table of Visualization Methods (If you've ever wondered how to model something, or were looking for new ideas for segmenting and presenting complex concepts, this is an incredible online resource. A neat graphical explanation and example of each "element" (ex; a cycle diagram) appears as soon as your cursor scrolls over them. For instance, they've color-coded their categories: data, metaphor, concept, strategy, information, and compound visualisation techniques. As if that were not enough to spark your brain, the creators also provide clues as to whether the model works best for convergent or divergent thinking, and whether it is more for an overview vs. detailed perspective.) [http://www.visual-literacy.org/periodic\\_table/periodic\\_table.html](http://www.visual-literacy.org/periodic_table/periodic_table.html)

Sentinel Visualizer (for those of you who have experience with Crime Link and Analyst Notebook this one should be quite interesting. You can download a 45-day fully functional with all the bells and whistles copy and take it for a spin, and at the same time train yourself to use the software. It may come in handy down the road and you can always say you know how to use it) <http://www.fmsasq.com/>

The Best Ever Freeware Utilities <http://www.techsupportalert.com/>

Ideas Worth Spreading: Imagine what the open source analyst has at his/her disposal with this type of technology. View the video and see what I mean <http://www.ted.com/index.php/talks/view/id/129>

Want Your Own Blog? It's Easy. It's Free <https://www.blogger.com/start> <http://wordpress.com/>

TOR Anonymizer <http://www.torproject.org/>

Images (convert 2D to 3D online for free) The 3D face reconstruction may have utility if you only have a frontal face shot of a suspect. <http://sourcesandmethods.blogspot.com/2008/02/convert-2d-to-3d-online-for-free.html> <http://make3d.stanford.edu/>

Semantics – in a nutshell, the study of words. Great site of 302 semantic web videos and podcasts. <http://www.semanticfocus.com/blog/entry/title/302-semantic-web-videos-and-podcasts/>

NNDB Mapper (a visual tool for exploring the connections between people in NNDB, linking them together through family relations, corporate boards, movies and TV, political alliances, and shadowy conspiracy groups. Maps can be saved and shared for others to explore.) <http://www.nndb.com/>

Generate Maps of the Blogosphere (Generate animated clickable maps of connected blogs from [Blogger](#). Simply enter the URL of a blog website to start mapping. [http://www.lococitato.com/blogger\\_map/blogger\\_map.html](http://www.lococitato.com/blogger_map/blogger_map.html) <http://www.lococitato.com/>

TouchGraph Google Browser (The touch graph google browser reveals the network of connectivity between websites, as reported by Googles database of related websites)

<http://www.touchgraph.com/TGGoogleBrowser.html>

SquidMat (The program compares two or more courses of action based on two or more evaluation criteria. The user arranges the evaluation criteria in descending order of importance and tells the program how much more important each criterion is than the next lower criterion. These importance ratings are used to calculate weights for each criterion. SquidMat takes user-supplied values for each course-of-action/criterion combination and converts them to Z scores. Using the criterion weights, the program calculates weighted sums for each course of action. The course of action with the highest weighted sum is considered to be the best.)

Decision Matrix Software Download

<http://faculty.tamu-commerce.edu/jmstauffer/Squidmat/>

<http://www.dcswhit.com/military/software.html>

NNDB Tracking the Entire World. Not sure if this one has any utility but I throw it in for your perusal. I had fun with Fidel Castro, Hugo Chavez and Vladimir Putin. NNDB is an intelligence aggregator that tracks the activities of people we have determined to be noteworthy, both living and dead. Superficially, it seems much like a "Who's Who" where a noted person's curriculum vitae is available (the usual information such as date of birth, a biography, and other essential facts.). But it mostly exists to document the connections between people, many of which are not always obvious. A person's otherwise inexplicable behavior is often understood by examining the crowd that person has been associating with.

<http://www.nndb.com/>

Visualization Software: Analysts are great when it comes to understanding relationships. Visual results jump right at you. If they can query a search engine that produces results in a relational (visual) format, they immediately grasp the information and start drawing conclusions. Visual results are more appealing than endless lists of browsing results which are extremely time consuming even when doing key word searches.

Viewzi is a metasearch engine. It searches not only Google and Yahoo, but also Flickr, YouTube and other great sources of information to present the search results blended in different "flavors". You not only get one, but seemingly countless ways to view your search results, each using thumbnail images, screenshots and more as visual aids

<http://www.viewzi.com/>

NeXplore lets you choose between three ways of viewing search results. For starters, there is the regular list of web search results: Title, description and URL. But you get much more than that. Thumbnail images and pop-up previews which make it easier to browse the search result and decide which to click.

## **Steganography and Terrorists**

*How To Send Messages That Even The NSA Cannot Read*

<http://www.forbes.com/sites/josephsteinberg/2013/09/08/how-to-send-messages-that-even-the-nsa-cannot-read/>

*Steganography is the science of writing hidden messages in such a way that no one apart from the sender and intended recipient even realizes there is a hidden message.*

*Sunday, July 31, 2011*

*In 2010 Moscow communicated with a ring of alleged spies in America by encoding instructions in otherwise innocent-looking images on public websites. It's a process called steganography. Steganography is a smart way to hide data into other files, called carriers. Modified carriers will look like the original ones, without perceptible changes. The advantage of steganography, over cryptography alone, is that messages do not attract attention to themselves. Plainly visible encrypted messages will arouse suspicion, and may in themselves be incriminating in countries where encryption is illegal. Today we can use some free tools to create covert transmission for any sensitive data or to protect your copyright.*

*Protecting files copyright is by using Watermarking which is the process of embedding information into a digital signal which may be used to verify its authenticity or the identity of its owners. Still images, video, music, text, and software are all easily copied and illegally distributed, causing the authors to lose out on considerable income in royalties.*

*By embedding identifying information in a file, watermarking software enables authors to control the distribution of and to verify ownership of their digital information.*

*The first tool is OpenPuff a freeware steganography tool for Microsoft Windows created by Cosimo Oliboni and still maintained as independent software author.*

*The program is notable for being the first steganography tool (version 1.01 released on December 2004) that:*

- *Let's users hide data in more than a single carrier file. When hidden data are split among a set of carrier files you get a carrier chain, with no enforced hidden data theoretical size limit (256Mb, 512Mb... depending only on the implementation)*
- *Implements 4 layers of hidden data obfuscation (cryptography, scrambling, whitening and encoding)*
- *Extends deniable cryptography into deniable steganography*

*The current version is OpenPuff 3.40 and released on the 18th of July.*

*Another interesting tool is QuickStego which lets you hide text in pictures so that only other users of QuickStego can retrieve and read the hidden secret messages.*

*Once text is hidden in an image the saved picture is still a 'picture', it will load just like any other image and appear as it did before.*

*The image can be saved, emailed, uploaded to the web as before, the only difference will be that it contains hidden text*

## **Submarine Cables (connecting the world)**

After reading as much as I could on submarine cables I am convinced that our privacy is not secure at all. You will feel the same when you study the maps and see how connected the globe is. So simple to tap into practically any location and start absorbing all the information. I'm certain the NSA is rejoicing.

Intelligence agencies target information highways

Submarine cables make the global information highways a reality. The newest spy scandal forces states to further expand their networks. Now, the idea of a European internet has been put forward.

Fiber optic cables have taken hold of the pole position with a share of 95 percent of worldwide data traffic, replacing satellite links. In the last 15 years numerous high-performance submarine cables were laid between continents, for the internet. Massive amounts of data stream through them. Full order books are a reason for various cable manufacturers to be happy. For intelligence agencies, for instance for the NSA, this enormous mass of data is a real paradise. In order to keep information secret, several states are now placing their bets on new cable links.

### **Continuous network expansion**

Without submarine cables, there would be no global communications network. They transport vast amounts of phone calls and emails, make cable television possible and provide a fast internet. In order to meet rising demand and to reach new regions, the networks are being continuously expanded.

For outsiders, submarine cables appear to be unproblematic – cables laid in great depths appear to be risk-free. Yet they were never secure. Dangers already lurked in the past.

After all, cables withstand mostly currents and the high pressure levels of the deep sea. However, problems always pose themselves near the coast. Trawl nets and anchoring ships damage cables. For example, the anchor of a ship harboring in the port of Mombasa, Kenya, severed a submarine cable. As a consequence, large parts of East Africa were cut off from the internet.

### **Spying on the net**

Sea quakes, currents and sandbanks can also create disturbances. Cables are also a target for attacks. Last year, divers planned on severing the SEA-ME-WE 4 submarine cable off of the coast of Egypt, a cable important for providing the internet connection between Europe, Southeast Asia, India and the Middle East.

On top of it all, whistleblower Edward Snowden last year revealed that spying activities, chiefly of the USA and Great Britain, had got out of hand. Spying was justified by claiming it was being done to fight terrorism and to warn of imminent attacks. However, many states were shocked by the full extent of intelligence gathering.

Even though modern fiber optic cables have replaced copper coaxial cables over the course of the last years, intelligence agencies were able to eavesdrop. Already at the turn of this millennium reports surfaced, claiming US submarines were tapping into these cables, which back then hardly appeared possible. Experts assume that fiber optic cables are also wiretapped on land. Especially amplifiers and nodes are seen as suitable targets.

### **Rich harvest**

Fiber optic cables allow for a rich harvest, as they transmit a huge amount of data. Optical fibers transmit data as light impulses, nearly with the speed of light. Data rates of around 160 gigabit per second are currently standard, for a pair of optical fibers. Fiber optic cables thus remain essential for carrying data. Data rates are higher, and bandwidth is greater than what satellites can offer. This makes them economically viable, despite high costs for laying them under the sea.

Both phone calls and data are transferred over fiber optic cables. Despite strong tubing, they can be spied upon, to a certain degree. Where fiber optic cables are slightly bent, data can leave its path. A small amount of optical information is, due to Rayleigh scattering. The emitted light can be captured by sensors, amplified and turned back into information.

Typical fibre optic cables are protected by a stainless steel tube, and are placed in a water blocking compound. On the outside, another layer of material protects the cable from salt water. Layers of steel wires covered by plastics add further protection. A layer of copper foil can also be employed. Hybrid cables also feature a copper cable.

### **Tapping into submarine cables**

Cable system TAT-14 made the headlines during the wiretapping scandal, a system owned by German telco Deutsche Telekom. A large part of German overseas communication uses this system.

The 15.000 kilometer long cable runs twice through the North Atlantic and connects Europe with the USA. Four fibre optic pairs with 640 GBit/s SDH capacity and a total design capacity of 3.2 Bit/s. British signals intelligence agency GCHQ gained access to TAT-14 as part of the Tempora program, English newspaper "The Guardian" reported. In turn, US intelligence agency tapped submarine cable Sea-MeWe 4, which is 18.800 kilometers long and connects

France with Singapore. Dense Wavelength Division Multiplexing (DWDM) is used to increase capacity of the fibers, using different wavelengths to transmit data.

#### New connection – without the USA

Data is routed nearly completely over US networks. “We need to respect privacy, human rights and the sovereignty of nations,” Brazilian president Dilma made clear. Furthermore, she stated industrial espionage was undesired. A plan has therefore been made to create a direct connection between Europe and Brazil through a submarine cable. Cable laying will start in summer 2014, the 185 million dollar expensive project spanning 8,500 kilometers is to be completed 18 months later. The aim is to make it a lot more difficult for the US to tap the cable.

Finland also wants to protect itself against spies through a new submarine cable. The cable is to be laid across the Baltic Sea and is supposed to link the Scandinavian country with Germany. The background is that Sweden, Finland's neighbor, has been allowing foreign data traffic to be tapped, since a couple of years. Finnish minister Pekka Haavisto sees “Sweden spying,” the neighboring country is viewed as a tool for foreign agencies. So far, the only internet cable runs through Sweden, Finland wants to change the situation. A new cable needs to be laid.

#### A “European internet”

First, a global network of high performance cables was rolled out. Now, further cables will be installed, to bypass the USA and its control of data flows. The cable market remains on the move, even though the reasons are unfortunate. In Europe, the spy scandal has meanwhile given birth to the idea of an internet of its own.

The fastest route so far was across nodes in the USA or Asia, which made it easy for intelligence agencies to listen in and spy. Now, views have changed. “In light of the data scandals it not only makes economic sense for us to reduce our dependency from America,” Austrian EU commissioner Johannes Hahn said in an interview with German newspaper Frankfurter Allgemeine Sonntagszeitung. German chancellor Angela Merkel also sees need for action. Talks with French president François Hollande also included new routes for cables. The chancellor stated “it is unnecessary for one's emails and so on to pass over the Atlantic, communication networks can also be created within Europe”. Should such a network be constructed, data originating in Germany would be transmitted over cables within Germany.

#### The trump card

As a product, cables will not only continue to play a central role for the expansion of the internet, but also as a trump card to prevent espionage. The silver bullet, the development of spy-proof cables, appears to be far in the future.

Innovations in the fields of wire and cable will be presented at wire Düsseldorf, taking place from April 4 to 8, 2016 at Düsseldorf fairgrounds.

## Sudan

Security conditions in South Sudan remain volatile—sporadic violence continues to generate population displacement and impede humanitarian assistance. Clashes between Government of the Republic of South Sudan (GoRSS) and opposition elements in Renk town, Upper Nile State, on January 17 forced relief actors to temporarily shelter in place, while some residents of Renk fled

the town. As of January 19, however, shelling had subsided and humanitarian staff were conducting relief activities in Abayouk and Wonhow IDP sites. Many of those displaced from Renk during the clashes returned to the town on the same day.

## **Suicide Bomber Profile**

Following is a checklist for observing, reporting, responding and investigating suicide bombing incidents. It is not designed as a comprehensive or complete list of all considerations in these areas but is suggestive of the types of common concerns that may affect police and other emergency service responders. A noted authority on terrorism states that Israeli authorities and psychologists have carefully developed behavioral profiles that might help security personnel identify a potential suicide bomber. The following are among the most obvious signs of such persons according to this source.

- The wearing of heavy clothing, no matter what the season. Long coats or skirts may be used to conceal explosive belts and devices.
- An unusual gait, especially a robotic walk. This could indicate someone forcing or willing himself/herself to go through with a mission.
- Tunnel vision. The bomber often will be fixated on the target and for that reason will look straight ahead. He or she also may show signs of irritability, sweating, tics, and other nervous behavior. (The Al Qaeda terrorist Ahmed Ressam, who was captured at a border crossing in Washington state while driving a car filled bomb-making materials, caught the attention of authorities because of his excessive sweating, furtive eyes, and other nervous movements.)
- The appearance of being drugged. The suicide truck bomber who attacked the U.S. Marine Barracks in Beirut in 1983 had been drugged before the attack and was tied to the seat of his vehicle.
- Signs of drug use - including, for example, enlarged pupils, fixed stare, and erratic behavior.

- Bags or backpacks (used to carry explosives, nails, and other shrapnel). The bomber generally holds his or her bag or backpack tightly, sometimes gingerly, and may refuse to be separated from it.
- A fresh shave—a male with a fresh shave and lighter skin on his lower face may be a religious Muslim zealot who has just shaved his beard so as not to attract attention, and to blend in better with other people in the vicinity.
- A hand in the pocket or tightly gripping something—this could be someone clutching a detonator or a trigger for an explosive device. Such triggers, which may be designed in the form of button, usually are rather stiff so that they may not be set off accidentally. (One Israeli acquaintance described how he and several guards shot a would-be bomber numerous times, but found his twitching finger still on the button—and still posing a danger, thereafter.)
- Evasive movements. It seems obvious that anyone who tries to avoid eye contact, or to evade security cameras and guards, or who appears to be surreptitiously conducting surveillance of a possible target location, may be a bomber.

Such profiles are valuable not only for law enforcement personnel but for all persons who work in security or related fields in facilities or other locations that are potential targets or, where intelligence indicates an elevated risk of a terrorist attack. Programs throughout the United States have successfully recruited key personnel within the community to act as additional eyes and ears for law enforcement. Mall security officers for example have been introduced to the above type of profile information in order to more effectively spot potential terrorist threats. Similarly, community outreach programs provided training to other persons who are in positions where they are more likely to interact with terrorist cells or operatives, such as car rental agents, truck rental agents, security storage operators, hotel and motel managers, school and hospital security officers, and related persons.

## Questions

1. Which of the following statements is *false*?

- (a) *Suicide bombing attempts have not yet been made within the United States.*
- (b) *Most of what we know presently about suicide bombings has come from experiences overseas in Israel and Iraq.*
- (c) *A major disadvantage of suicide bombers on foot is the limited amount of explosives that they can reasonably conceal and carry.*
- (d) *A major advantage of suicide bombers on foot is that they can penetrate targets not otherwise available to motor vehicles.*

2. Which of the following statements is *false*?

- (a) *The main advantage of vehicular suicide bombers is the ability to carry large explosive payloads.*
- (b) *Bloodborne pathogens can be delivered by suicide bombers.*
- (c) *Suicide bombers can and have penetrated heavily fortified compounds.*
- (d) *None of the above is false.*

3. Which of the following statements is *false*?

- (a) *Suicide bombers often target location where large numbers of persons gather.*
- (b) *In the preincident phase, surveillance of a target is often performed.*

(c) Most commonly, suicide bombers are unmarried males between 16 and 40 years of age.

(d) Females have not been used for suicide bombings.

## Answers

1. (a) Suicide bombing attempts have been made within the United States.
2. (d) None of the statements is false.
3. (d) Females have been used as suicide bombers.

## Suspicious Packages

### How to Handle Suspicious Mail

What constitutes a suspicious letter or parcel? Some typical characteristics which ought to trigger suspicion include letters or parcels that:

- Have any powdery substance on the outside.
- Are unexpected or from someone unfamiliar to you.
- Have excessive postage, handwritten or poorly typed address, incorrect titles or titles with no name, or misspellings of common words.
- Are addressed to someone no longer with your organization or are otherwise outdated.
- Have no return address, or have one that can't be verified as legitimate.
- Are of unusual weight, given their size, or are lopsided or oddly shaped.
- Have an unusual amount of tape.
- Are marked with restrictive endorsements, such as "Personal" or "Confidential."
- Have strange odors or stains.

19 OSINT RESOURCES ON TERRORISM, NATIONAL SECURITY, COUNTERINTELLIGENCE

[http://osintdaily.blogspot.com/2014/08/19-osint-resources-on-terrorism.html?utm\\_source=feedburner&utm\\_medium=feed&utm\\_campaign=Feed%3A+blogspot%2FvpAFr+%28OPEN+SOURCE+INTELLIGENCE+%28OSINT%29+NEWS%29](http://osintdaily.blogspot.com/2014/08/19-osint-resources-on-terrorism.html?utm_source=feedburner&utm_medium=feed&utm_campaign=Feed%3A+blogspot%2FvpAFr+%28OPEN+SOURCE+INTELLIGENCE+%28OSINT%29+NEWS%29)

1. To find excellent news about what's happening right now in Pakistan, click [HERE](#)
2. [The Defense Daily Network](#) is the leading source for business news, market research, competitive analysis & actionable intelligence in the global defense industry.
3. The [Foundation For Defense of Democracies](#) (FDD) focuses on terrorism, democracy and counterterrorism education, strategic communications and investigative journalism. It fights the ideologies that drive terrorism.
4. [Real Clear Defense](#) is the source for the best defense news and commentary in one place. I rate this as excellent for OSINT research due to the varied and numerous articles available.
5. The [Georgetown Journal of International Affairs](#) (GJIA) is the official publication of the Edmund A. Walsh School of Foreign Service at Georgetown University. It often contains articles about terrorism, the

Intelligence Community (IC), and military affairs.

6. The [\*\*Center for the Study of the Drone\*\*](#) (Drone Center) has articles about issues surrounding the use of drones.
7. The [\*\*START Consortium\*\*](#) is a center of excellence committed to the scientific study of human causes and consequences of terrorism in the U.S. and around the world.
8. [\*\*Domestic Preparedness\*\*](#) has a wealth of info for first responders, police and the lay public that prepares them for a terrorist attack or catastrophic event.
9. [\*\*War on the Rocks\*\*](#) is a web magazine for analysis, commentary, and debate on foreign policy and national security issues through a realist lens. It features articles and podcasts produced by an array of writers with deep experience in these matters: top notch scholars who study war, those who have served or worked in war zones, and more than a few who have done it all.
10. The [\*\*Global Security Newswire\*\*](#) offers articles about WMD's, terrorist operations, counterterrorism, and national security in general.
11. [\*\*Jason Leopold of Aljazeera News\*\*](#) is an investigative reporter covering Guantanamo, counterterrorism, national security, human rights, open government and civil liberties issues. He's been called a "FOIA Terrorist" by federal employees for his aggressive use of the Freedom of Information Act, which included suing the FBI and forcing the agency to change its policies.
12. [\*\*Military\(dot\)com\*\*](#) offers hundreds of articles and updates about each branch of the military and concerns about national security and global anti-terrorism efforts.
13. [\*\*Breaking Defense\*\*](#) offers professional articles regarding military and defense issues of our land, air and sea forces. In addition, the site discusses congressional issues, intelligence & cyber happenings, and the strategies and policies that affect America's defense needs.
14. [\*\*Defense One\*\*](#) provides the latest news, analysis and ideas for the new era in America's national security.
15. [\*\*The Aspen Security Forum\*\*](#) provides professional, well-documented information and discussion on issues concerning America's Homeland Security, National Security, Counterterrorism, Intelligence, Cybersecurity and Local Law Enforcement.
16. The [\*\*Center For A New American Security\*\*](#) is an independent, private consortium of experts who develop strong, pragmatic and principled national security and defense policies. The site provides innovative, fact-based research, ideas and analysis concerning national security issues.
17. [\*\*The Chatham House- Royal Institute of National Affairs\*\*](#) is an independent policy institute based in London concerned with international security. High quality & policy relevant insight and analysis on a wide range of critical defence and security issues is provided.
18. [\*\*The Association of Old Crows \(AOC\)\*\*](#) is a non-profit international professional association with over 13,000 members and 200+ organizations engaged in the science and practice of Electronic Warfare (EW), Information Operations (IO), and related disciplines.
19. [\*\*Government Matters\*\*](#) is a TV news broadcast that covers federal government concerns in general, but often covers in-depth issues concerning the U.S. Intelligence agencies, terrorism and national security.

Study Of Terrorism And Response To Terrorism (START) The Global Terrorism Database (GTD) is an open-source database including information on terrorist events around the world since 1970 (currently updated through 2004). Unlike many other event databases, the GTD includes systematic data on international as well as domestic terrorist incidents that have occurred during this time period and now includes almost 80,000 cases. For each GTD incident, information is available on the date and location of the incident, the weapons used and nature of the target, the number of casualties, and -- when identifiable -- the identity of the perpetrator.	<a href="http://www.start.umd.edu/data/gtd/">http://www.start.umd.edu/data/gtd/</a> <a href="http://c21.maxwell.af.mil/terrorsm.htm">http://c21.maxwell.af.mil/terrorsm.htm</a>

## ***The Deep Web***

What is the Deep Web? <http://money.cnn.com/infographic/technology/what-is-the-deep-web/>

The Deep Web you don't know about

[http://money.cnn.com/2014/03/10/technology/deep-web/index.html?hpt=hp\\_t3](http://money.cnn.com/2014/03/10/technology/deep-web/index.html?hpt=hp_t3)

What we commonly call the Web is really just the surface. Beneath that is a vast, mostly uncharted ocean called the Deep Web.

By its very nature, the size of the **Deep Web** is difficult to calculate. But top university researchers say the Web you know -- Facebook (**FB**, **Fortune 500**), Wikipedia, news -- makes up less than 1% of the entire World Wide Web.

When you surf the Web, you really are just floating at the surface. Dive below and there are tens of trillions of pages -- an unfathomable number -- that most people have never seen. They include everything from boring statistics to human body parts for sale (illegally).

**Related story: Shodan, the scariest search engine on the Internet**

Though the Deep Web is little understood, **the concept is quite simple**. Think about it in terms of search engines. To give you results, Google (**GOOG**, **Fortune 500**), Yahoo (**YHOO**, **Fortune 500**) and Microsoft's (**MSFT**, **Fortune 500**) Bing constantly index pages. They do that by following the links between sites, crawling the Web's threads like a spider. But that only lets them gather static pages, like the one you're on right now.

What they don't capture are dynamic pages, like the ones that get generated when you ask **an online database** a question. Consider the results from a query on the **Census Bureau site**.

"When the web crawler arrives at a [database], it typically cannot follow links into the deeper content behind the search box," said Nigel Hamilton, who ran Turbo10, a now-defunct search engine that explored the Deep Web.

Google and others also don't capture pages behind private networks or standalone pages that connect to nothing at all. These are all part of the Deep Web.

So, what's down there? It depends on where you look.

**Infographic: What is the Deep Web**

The vast majority of the Deep Web holds pages with valuable information. A **report** in 2001 -- the best to date -- estimates 54% of websites are databases. Among the world's largest are the **U.S. National Oceanic and Atmospheric Administration**, **NASA**, the **Patent and Trademark Office** and the Securities and Exchange Commission's **EDGAR** search system -- all of which are public. The next batch has pages kept private by companies that charge a fee to see them, like the government documents on **LexisNexis** and **Westlaw** or the academic journals on **Elsevier**.

Another 13% of pages lie hidden because they're only found on an Intranet. These internal networks -- say, at corporations or universities -- have access to message boards, personnel files or industrial control panels that can flip a light switch or shut down a power plant.

Then there's Tor, the darkest corner of the Internet. It's a collection of [secret websites](#) (ending in .onion) that require [special software](#) to access them. People use Tor so that their Web activity can't be traced -- it runs on a relay system that bounces signals among different Tor-enabled computers around the world.

### Shopping for LSD and AK-47s online

It first debuted as [The Onion Routing project](#) in 2002, made by the U.S. Naval Research Laboratory as a method for communicating online anonymously. Some use it for sensitive communications, including political dissent. But in the last decade, it's also become a hub for black markets that sell or distribute drugs (think [Silk Road](#)), stolen credit cards, illegal pornography, pirated media and more. You can even hire assassins.

### [Related story: NSA has its eye on Tor](#)

While the Deep Web stays mostly hidden from public view, it is growing in economic importance. Whatever search engine can accurately and quickly comb the full Web could be useful for Big Data collection -- particularly for researchers of climate, finance or government records.

Stanford, for example, has built a prototype engine called the Hidden Web Exposer, [HiWE](#). Others that are publicly accessible are [Infoplease](#), [PubMed](#) and the University of California's [Infomine](#).

And if you're really brave, download the [Tor browser bundle](#). But surf responsibly.

Academic Index

<http://www.academicindex.net/>

Deep Web Search Tools for Everyone  
Deep Web Search Engines

<http://deep-web.org/>

### **Multi Search engines**

[Deeperweb.com](#) – This is my favorite search engine. It breaks your results down into categories – general web, blogs, news, academic, cloud, metrics, research, etc. This allows you to quickly focus on the type of answer you were looking for. Makes my top 10 websites!

[Zuula.com](#) – nice multi engine aggregator

[Surfwax](#) – They have a 2011 interface for rss and a 2009 interface I think is better. Takes 60 seconds to understand how to use it.

[Dogpile](#) – another multi engine aggregator

Scout Project- [scout.wisc.edu](#) — Since 1994, the Scout Project has focused on developing better tools and services for finding, filtering, and presenting online information and metadata.

### **Cluster Analysis Engine**

[TouchGraph](#) – A brilliant clustering tool that shows you relationships in your search results using a damn spiffy visualization. The smart way to use it, is to let it help you find new sources to your search topic. I have to add, the wiggly effect on the visualization is damn cool, just grab the center item and move it to understand what I'm talking about. (sometimes it doesn't wiggle, however. Java issue?)

[Yippy.com](#) – A useful, non-graphical clustering of results. Give it 2 minutes of your time to understand how it works and it will give back hours of saved research time.

[www.quintura.com](#) – An interesting data mining search engine that shows related words to your target. Good if you aren't sure what the exact name of the subject is you seek

[www.navagent.com/-](#) Not a web based search engine, requires you download software. Highly rated, very interesting especially to the 35F intel types.

### **Speciality Deep Web Engines**

[Infomine](#) - comprehensive virtual library and reference tool for academics. But I've found it not too useful, better engines out there.

[Archive.org](#) – Huge behemoth of media now public domain – rare books, sound recordings, video, 20 year archived

images of all old websites, and free audio books! Makes my top 10 list. (and my top 3)

[WWW virtual library](#) – a listing of indexes to industries. Need to know about Architecture? Biochemical war? Zoology? This may get you there.

[FindArticles.com](#) – FindArticles has articles from about 500 periodicals with coverage back to 1998, and is completely free of charge.

[Library of Congress](#) – loc.gov – Phenomenal digitized archives, "American Memory" especially interesting. Includes a good newspaper archive.

[www.osti.gov](#) - Government research archives, if your tax dollars paid for it, the results are here. Also a huge collection of science presentation videos.

[US Geologic Survey](#) – Imagery and Maps galore. 3 portals to fetch data, EarthExplore, Glovis and Seamless. Extremely complex. There are tutorials on [how to get free aerial photos](#) over at [learninggis.com](#).

[US National Map by USGS](#) - The source for current geospatial data from the USGS.

[http://adswww.harvard.edu/](#) – Physics and Astronomy data engine for academic papers

### **General**

[GPO's Catalog of US Government Publications](#) — Federal publications database.

[Smithsonian Institution Libraries](#) — 20 libraries from museum complexes around the world.

[The National Archives](#) — National Archives' research tools and online databases.

[HighWire Press](#) — Online catalog of the largest repository of free full-text and non-free text, peer-reviewed content, from over 1000 different journals.

[Education Resources Information Center \(ERIC\)](#) — A catalog with more than 1.2 million bibliographic records, many with full text. Sponsored by the US Department of Education.

[Encyclopædia Britannica](#) — The old and authoritative encyclopedia searchable with full text online. No longer printing paper copies. The internet killed the library star.

[Topix.net](#) — A news search engine.

[Internet Public Library](#) — Internet's public library. More for kids than adults, IMHO.

[San Francisco Public Library](#) — A great online library. This is just one example of many such local public libraries that offer similar services. Sorry, you can't use their access to commercial archives unless you are a member.

[Xrefer \(commercial\)](#) — Fee based database of 236 titles and over 2.9 million entries.

[LexisNexis \(commercial\)](#) — Billed as the world's largest collection of public records, unpublished opinions, legal, news, and business information. Over 35,000 individual sources are claimed as searchable. I've not been able to justify subscribing, so I don't know.

[Forrester Research \(Commercial\)](#) — An independent technology and market research company, publishing in-depth research reports on a variety of subjects.

[Factiva \(Commercial\)](#) — Online collection of about 10,000 individual sources. It's a fact.

#### **Find People & Background Checks**

[Pipl.com](#) — for finding people

[zabasearch.com](#) — finding people

[Intellus \(commercial\)](#) — Finding people plus background checks on people and other features.

[US Search \(commercial\)](#) — Finding people plus background checks on people.

[123 People \(commercial\)](#) — A multi search engine built around finding people.

[Integrascan](#) — Finding people plus background checks on people.

[State of Texas DOT Criminal Background Check](#) — The central background check for felonies provided by the state. Most misdemeanours don't show up.

#### **Books Online**

[Archive.org](#) — Has books online in epub, txt, and pdf formats. The collection encompasses others such as Gutenberg Press, etc. So this is the best site to start with. Again, this makes my top 10 websites. Share the love.

[Books.google.com](#) — They are putting the squeeze on all the book scanning businesses. They want to scan the world to add it to the Google Borg. You will be assimilated.

[The Online Books Page](#) — A searchable database of more than 28,000 English works with full text available for free online.

[Bibliomania](#) — A database of free literature from more than 2,000 classic texts. Archive.org crushes this.

[Project Gutenberg](#) — The granddaddy of online books with a catalog of more than 20,000 free books with full text available online. Included in Archive.org.

[The National Academies Press](#) — Only about 3,000 free books online and ~900 for-sale PDFs.

[ebrary](#) — A database of about 20,000 full-text books. Focusing on academia and business.

[UNZ](#) — An odd collection of periodicals and book scanned.

[Get Abstracts \(commercial\)](#) — Large online library of more than 8,000 business book summaries. It is the most efficient way to get the best business titles.

#### **Newspaper Archives Online**

[US newspaper coverage](#) — ResearchGuides lists links to many newspapers

[Library of Congress Newspaper Resource List](#) — LOC does a great job getting the list together of wonderful newspaper archives.

[NewspaperArchive.com](#) — (commercial) — Known for a large collection. I haven't used it, so I can't confirm this.

[xooxleanswers.com](#) — Great list of newspaper archives from Xooxle. Good list and a funky name. Two thumbs up.

[University of Penn Newspaper Archive](#) — List of US newspaper archives and dates. Looked like a deeper list of Texas newspapers, so this effort may be a deep comprehensive list.

#### **Audio Books Online**

[LibreVox.org](#) — Huge selection of audio recordings and AudioBooks read by volunteer voice artists

#### **Business Deep Web Engines**

[AAA AgencySearch.com](#) — Advertising agencies via the American Association of Advertising Agencies.

[Agency ComPile](#) — Advertising and marketing agencies.

[Alibaba](#) — An international marketplace of businesses looking for businesses.

[Kompass](#) — Business to business search engine.

[GPO Access Economic Indicators](#) — Gateway for economic indicators from January 1998 to present.

[Government Printing Office](#) — Big catalog of stuff published by the Government Printing office. Has business stuff but much much more. Environmental reports, legal docs, nature stuff. Hell, I typed in 'mushroom' and pulled up 34 entries.

[Hoover's](#) — The Big Boy of info on businesses.

[ThomasNet](#) — Just an industrial product search directory.

[SBA Loan Data](#) — Loan program approval activity from the Small Business Administration.

[GuideStar.org](#) — A searchable database of non-profit organizations including 501c.

#### **Consumer Engines**

[US Consumer Products Safety Commission Recalled Products](#) — Listing of products, sortable by company name.

[Melissa Data](#) — Comprehensive directory of demographic data, sortable by ZIP code.

[Kelley Blue Book](#) — A guide to pricing new and used vehicles.

[Edmunds](#) — A recognized and established guide to pricing new and used vehicles.

[Consumer Reports](#) — (commercial) A trusted guide to product reviews, including autos, appliances, electronics, computers, personal finance, etc. I use it.

#### **Economic and Job Search Engines**

[EUROPA Press Release Database](#) — Database of press releases by the European Union.

[FreeLunch.com](#) — Directory of free economic data.

[Bureau of Labor Statistics](#) — Job-based and consumer economic info from the US Department of Labor.

[Salary Wizard Calculator](#) — Tools that shows national average salaries adjusted by location for different jobs.

[Economatic](#) — A data directory containing over 200,000 econ files.

[Penn World Tables](#) — National income data for all countries for the years 1950-2007.

[America's Job Bank](#) — Database of jobs and resumes.

[USAJOBS](#) — Portal of data on federal government jobs.

[Regional Economic Conditions \(RECON\)](#) — Economic data available by state, county, and MSA.

#### **Finance**

[Bankrate.com](#) — Database of interest rates for different loan types, mortgages, and savings accounts.

[InvestiQ](#) — Market data from around the world in regions.

[BigCharts](#) — Quotes and performance charts on different stocks and mutual funds.

[SmartMoney.com Tools](#) — A portal of for stock analysis tools.

[NASDAQ Trader](#) — A database of stock data from the NASDAQ stock exchange.

[SEC Info](#) — EDGAR and SEC filings searchable by name, industry, SIC code, etc.

[EDGAR Online](#) — SEC filings searchable by ticker or company name.

#### **Government Search Engines**

[Copyright Records \(LOCIS\)](#) — Online copyright records, documents, serials, and multimedia.

[American FactFinder](#) — Aggregate census bureau data to be searched by city, county, or ZIP code.

[FedStats](#) — Gateway for statistics on 100 US federal agencies.

[United States Patent and Trademark Office](#) — Database of patents, full-text and full-page images.

[Historical Census Browser](#) — Repository of historical US census data. Going back to 1790 compiled by the University of Virginia.

[Geospatial One Stop](#) — Awesome [GIS](#) data warehouse of geographic data, shapefiles, imagery, and displayable on maps.

[Grants.gov](#) — Grant opportunities, from everything under the sun.

[Technology Opportunities Program Grants Database](#) — Listing of technology grants, peruse by keyword, state, and year.

[United States Government Printing Office \(GPO\)](#) — I mentioned this earlier, they seem to have everything. A search engine for multiple government databases: US budgets, campaign reform hearings, code of federal regulations, congressional bills, etc

[CIA Electronic Reading Room](#) — The usual uninteresting declassified CIA documents.

[POW/MIA Databases and Documents](#) — Info on POWs and MIAs.

[ZIP+4 Lookup](#) — US ZIP codes and ZIP+4 codes

#### **International Search Engines**

[International Data Base \(IDB\)](#) — Statistical tables and demographic information for countries and areas.

[FIRST](#) — <http://first.sipri.org/> Military aggression database and weapons holdings.

[Economics of Tobacco Control](#) — Information regarding tobacco usage and policy for 180 countries.

[Country Indicators for Foreign Policy](#) — Statistical tables on countries' foreign policies.

[World Bank Data](#) — Key development data and statistics for countries and worldwide groups.

[CIA Factbook](#) — Reference materials containing information on every country in the world.

[US International Trade Statistics](#) — International trade statistics, by country or type of good.

[US Foreign Trade Highlights](#) — Information of US international trade.

[Energy Information Administration International Energy Data and Analysis](#) — Energy balances sorted by country. Explains why the US gives huge amounts of cash to oil producing countries.

#### **Law and Politics**

[THOMAS \(Library of Congress\)](#) — Legislative information from the Library of Congress.

[Law Library of Congress](#) — Allegedly, the largest collection of legal materials in the world, over 2 million volumes.

[Global Legal Information Network](#) — Laws, regulations, judicial decisions, and other legal sources.

[FindLaw](#) — Free legal database, with collections of cases and codes, legal news.

[Office of Postsecondary Education Security Statistics](#) — Contains college campus crime statistics, sortable.

[Bureau of Justice Statistics](#) — <http://bjs.ojp.usdoj.gov/> Legal and judicial statistics, everything from crime to law enforcement.

[The Avalon Project at Yale Law School](#) — Documents in law, history, and diplomacy.

[US Congressional Documents and Debates, 1774–1873 \(Library of Congress\)](#) — The historical Congressional records, bills, documents, statutes, journals, and debates from LOC.

[Lobbying Database](#) — Who spent what on firms who have spent lobbying money from 1998. The US, with the finest Congress money can buy!

[Legislative Activities](#) — Synopsis of House of Representatives' bill summary, status, public laws, and votes.

[heinonline.org](#) — (commercial) — Claims to be the 'worlds largest image based database of legal documents'. I was able to find an obtuse document on using Bayes Theorem for fact finding in a criminal case.

[Project Vote Smart](#) — Government officials and election candidates database, order by last name or ZIP code.

#### **Medical and Health**

[PubMed](#) — The U.S. National Library of Medicine contains over 16 million citations from MEDLINE and other life science journals going back to the 1950s. Contains links to full-text articles and external resources. Supposed to be the best damn resource for medical out there.

[National Institute for Health Research Archive](#) — <http://www.nihr.ac.uk/Pages/NIHRArchive.aspx> Database of ongoing or completed projects funded by the British NHS.

[National Institutes of Health](#) — Encyclopedia of health topics. More of a kindof-deep-web resource, as Google has this indexed.

[American Hospital Directory](#) — Index of US hospital information.

[Globalhealthfacts.org](#) — Searchable world health information, by country, disease, condition, program, or demographic. Quickly lay out the conditions in a country.

[Centers for Disease Control and Prevention Data and Statistics](#) — Statistical health information according to the CDC. Not true deep web, but useful.

[New England Journal of Medicine \(commercial\)](#) — A Leading medical journal with full text past issues available online. Commercial, but you can access most for free.

#### **Science and Academic**

[\(Scholarly Paper search engines now have their own page\)](#)

[ScienceResearch.com](#) — Searchable access to scientific journals and databases.

[Academic Index](#) — Main search is a filtered Google search aimed at high authority rank sites, mainly .edu and .gov which filters a great deal out. Second search ties into deep web academic and non-academic databases skewed to librarians and educators.

[Science.gov](#) — Gateway to science info provided by US government agencies.

[VideoLectures.net](#) - Phenomenal video lecture coverage from high authority rank sources. A great go-to place to find peer-reviewed, conference presented, in depth coverage of a topic at a conference. A nice bonus, is the presentation slides are shown separately, and you can jump to slides of interest to you. Heavily technology based, and 66% is in English. Most lectures 45 minutes or longer.

[WebCASPAR](#) — A horrible interface to an alleged wealth of statistical info on science and engineering. I found the site slow, cludgy and designed around 1965 run off of candle power. From their website:"The WebCASPAR database provides easy access to a large body of statistical data resources for science and engineering (S&E) at U.S.

academic institutions. WebCASPAR emphasizes S&E, but its data resources also provide information on non-S&E fields and higher education in general.”

[The Complete Work of Charles Darwin](#) — Charles Darwin's published works, search-able and available online. He's still old and his works still ramble. Scanning didn't help him much.

[USGS Real-Time Water Data](#) — Real-time map of streamflow and water quality data of the USA's rivers and reservoirs.

[USGS Earthquake Hazards Program](#) — Showing real-time earthquake data. Focus on US but covers world as well.

[IEEE Publications \(Commercial\)](#) — Contains over 1.4 million documents from the Institute of Electronics and Electrical Engineers.

[Society of Petroleum Engineers Archive \(Commercial\)](#) — Petroleum engineers technical papers.

[Arxiv](#) — Cornell University repository. Access to 700,000+ technical papers on everything from quantitative biology to computer science. Appears to offer full text in several formats.

VADLO — [www.vadlo.com/](http://www.vadlo.com/) — (malware present as of 11/9/12) Life Science Search Engine. Very hit and miss. Don't have high expectations.

Deep Dyve ([Commercial](#)) — [www.deepdyve.com](http://www.deepdyve.com)

DeepDyve has aggregated millions of articles across

[thousands of journals](#) from the world's leading [publishers](#), including Springer, Nature Publishing Group, Wiley-Blackwell and more. Haven't paid the premium to give it a test ride, if someone has, please write a review below.

[Data Mining Data sources](#) -

<http://www.kdnuggets.com/datasets/index.html> – Links to gobs of free and commercial datasets used for data mining.

#### **Transportation**

[FAA Flight Delay Information](#) — A map of the United States with flight delay information from the nation's largest airports.

[NTSB Accident Database and Synopses](#) — The National Transportation Safety Board's database of aviation accidents, ranging from 1962 to present.

[NTSB Aviation Accident Database](#) — Aviation accident data from the National Transportation Safety Board

[National Highway Traffic Safety Administration](#) — A database of car and car part defects, searchable by item number or car make and model.

[SaferCar.gov](#) — Crash test safety ratings for automobiles since 1990.

[flightwise.com](#) — Real-time flight tracking, with support for Google Earth.

[FlightAware](#) — Fee flight tracking with history, graphs, and maps.

## **Tools For Communication Security**

### **A Guide to Giving NSA the Finger Without Them Ever Knowing**

<http://www.sovereignman.com/nsa-black-paper/>

If you are ever faced with a situation where you feel your communications are being intercepted the approach is to encrypt your files before emailing them to the person you're communicating with. They will have to know the password in order to decrypt and open the files. These are some tools for your use.

[VaultLetSuite](#)

[Encrypt Files](#)

[dsCrypt](#)

[MEO Encryption](#)

[LockNote](#)

[4t Hit Mail Privacy](#)

### **How To Send Messages That Even The NSA Cannot Read**

<http://www.forbes.com/sites/josephsteinberg/2013/09/08/how-to-send-messages-that-even-the-nsa-cannot-read/>

<http://www.spammimic.com/>

[Zeekly](#) We do not store a history of your search terms & sites visited, and this site is running on 2048-bit SSL encryption. Zeekly truly is a "grass roots" effort.

<https://www.zeekly.com/>

[DuckDuckGo](#) bills itself as a search engine alternative to google. Back in April, the question was how a small company could compete with the google goliath. The CEO stated that it was because they do not track your searches or target with advertising, and because of that, the company has benefited since the NSA leak alerted Americans that the government was, in fact, collecting data. Since the NSA news broke, duckduckgo web traffic has surged 33%. The CEO, Gabe Weinberg, did not anticipate a traffic increase as a result of competitors giving information to the government? It has long been known that people didn't want tracked and so it's no surprise that people are making a choice to switch to things, **they can still get great results and also**

**real privacy.** In a six-month period yahoo! said that they had 12,000 to 13,000 inquiries from the government, Apple, 4,000 to 5,000 inquiries, duckduckgo had zero inquiries, and the reason for that is that no data is stored. So if they come to us and they know it's in our privacy policy, we have nothing to handover. It's all anonymous data. So on big-tech companies and usually big companies in general, that information is stored in data warehouses and that's why it can be requested. With duckduckgo all information is literally thrown away. It never gets written into anywhere and never to disk. A lot of these companies, they're saving the data because they want to get advertising around that data. So how does duckduckgo make money? We don't need to track users to make money on web search, because it's based off the key word. You do mortgage research for your house; you type in mortgage bank rates and get a mortgage ad. We can do that without tracking. We have an ad on our site based on the keyword, not the person. To put it in perspective, it took 435 days to get from one to 2 million searches a day, and then only eight days to get from 2 million to 3 million, and all of them are new customers? I think people are out there having conversations with their friends and family and saying, hey, we don't want to be tracked. No one wants to be tracked. Why don't you try duckduckgo? You know, google is out there saying, look, we anonymize the information. They try not to give out the information and resist the government inquiries as much as possible but at the end of the day, if you have a valid court order, you have to do what it says.

**How to Shield Your Calls, Chats, and Internet Browsing From Government Surveillance**  
[http://www.slate.com/blogs/future\\_tense/2013/06/07/how\\_to\\_secure\\_and\\_encrypt\\_your\\_email\\_and\\_other\\_communications\\_from\\_prism.html](http://www.slate.com/blogs/future_tense/2013/06/07/how_to_secure_and_encrypt_your_email_and_other_communications_from_prism.html)

The Open Technology Fund has supported the development of tools that can be used for secure communication in the field. These tools include encrypted end-to-end cell phone conversations, encrypted text messaging, encrypted group chat and document sharing, anonymous communication on the Internet and secure instant messaging. We've created a short guide describing these tools, including available languages, use cases and where to access the tools for use today. You can download the May 2013 edition of the guide as a PDF document. [Download the Guide \[pdf\]](#)

#### Tools Included in the Guide

**RedPhone** is an Android app that secures your calls for free, with iOS support coming in the summer of 2013. RedPhone provides end-to-end encryption, securing your conversations so that nobody can listen in.

**TextSecure** is an Android app that secures your SMS/MMS communication, which encrypts your text messages in transit and on your phone. It's almost identical to your normal text messaging application, and is just as easy to use.

**Cryptocat** is an open, accessible instant messaging platform that encrypts your conversations right in your browser. Android and iOS apps are expected in the summer of 2013. Cryptocat aims to leverage both the ease of use and accessibility afforded by web applications and the security provided by client-side cryptography.

**Orbot** is an android application that allows mobile phone users to access the web, instant messaging and email without being monitored or blocked by their mobile internet service provider. Orbot brings the features and functionality of Tor to the Android mobile operating system. Tor prevents somebody watching your Internet connection from learning what sites you visit, and it prevents the sites you visit from learning your physical location.

**Orweb** is an android application that works hand in hand with Orbot to provide web access that is able to circumvent web filters and firewalls, while also improving a users ability to remain anonymous online.

**Gibberbot** is an android application offering private, encrypted chat for Google, Facebook, AOL and any Jabber or XMPP server using true verifiable end-to-end encrypted communications.

**ChatSecure** is an iOS application that offers private, encrypted chat and instant messaging for Google, Facebook and any Jabber or XMPP server using true verifiable end-to-end encrypted communications.

**Tor** is free software and an open network that helps you defend against a form of network surveillance that threatens personal freedom and privacy, confidential business activities and relationships, and state security known as [traffic analysis](#). [Download Tor](#)

**BT Guard** anonymous bittorrent services

**Pretty Good Privacy (PGP)** is a popular program used to [encrypt](#) and decrypt e-mail over the Internet. It can also be used to send an encrypted [digital signature](#) that lets the receiver verify the sender's identity and know that the message was not changed en route.

**GnuPG** is the GNU project's complete and free implementation of the OpenPGP standard as defined by RFC4880 . GnuPG allows you to encrypt and sign your data and communication, features a versatile key management system as well as access modules for all kinds of public key directories. GnuPG, also known as GPG, is a command line tool with features for easy integration with other applications. A wealth of frontend applications and libraries are available. Version 2 of GnuPG also provides support for S/MIME.

**Cloudfogger** encrypts your data on the local device before it gets uploaded to the cloud. That guarantees that Dropbox and others never get access to the content of your files. Cloudfogger protects your privacy with 256bit AES ([Advanced Encryption Standard](#)) encryption.

**Dropbox** to store private documents online.

**Jitsi** can be used for peer-to-peer encrypted video calls.

**Silent Circle** to make and receive encrypted calls and send encrypted texts and files, though your communications will be fully secure only if both parties to the call, text or file transfer are using the app.

The digital age has made it far trickier to thwart eavesdroppers who may be sitting at a desk thousands of miles away. But it can still be done. There are plenty of software tools anyone can use to keep prying marketers and hackers out of their business.

**TrueCrypt:** Security begins at home, and what's on your hard drive can say a lot about you -- and about everyone you know and communicate with. Encrypting the data on your computer's drive won't make it impossible (nothing is impossible), but it'll be extremely difficult for anyone to uncover what's stored there. TrueCrypt is free and can be used to encrypt an entire hard drive or a virtual disk to keep prying eyes out. For individual files, there's AxCrypt, which lets you encrypt and password-protected files with a click. It's great for sharing confidential documents, but you've also got to share the password.

**Tor:** Used by political activists and dissidents Tor is a free, open-source Web surfing program that runs in the background and hides your surfing habits and location. It accomplishes this by routing your connection through numerous nodes or hops, so it can also slow down your page views. On the other hand, it has proved adept at thwarting oppressive government officials. It has also been useful for criminals delivering viruses, so much so that some security programs automatically tag Tor traffic as malware.

**VPN:** One way the authorities (and hackers) trace things back to you is using your IP (Internet Protocol) address, which ISPs are often forced to render to authorities. That's how law enforcement sometimes learns military generals have supposedly secret email accounts, which they can then subpoena without their knowledge. To prevent such traces you can use a VPN, or virtual private network service, to hide your IP address. It's the same sort of connection used by many corporations to prevent security breaches using encrypted tunneling, but you can use it to route your connections through a remote server, often in a different country, and thus thwart trackers. **Free VPN services include Private WiFi and proXPN.**

**Google Voice:** One of the disruptive technologies Google has introduced -- but not enough people use -- is an online phone service based on technology it acquired when it bought Grand Central. Google Voice is intended to provide a single phone number that you can then use to route calls to any other number (up to five at a time). It's also great at filtering calls, and because it's free, you can get a new number for special sources and then close it down, making it difficult for authorities to eavesdrop or even figure out who called who.

**Burner:** Based on the concept of so-called burner phones (cheap, temporary cell phones that have no identifying account information and are later thrown away), the Burner app for Android and iPhones generates a temporary phone number you can give out instead of your real number. When you're done, you simply delete the number and it's gone. It's not free, however. Getting a number that lasts a week with 20 minutes of talk time, for example, costs \$1.99. Is it foolproof? Probably not if the government is trying to track you, but it makes it darn difficult.

**DeadDrop:** Another tool that has been used in various guises by whistle-blowers is DeadDrop. It uses Tor and provides a place online where sources can anonymously post confidential documents and information for reporters (just like the physical dead drops of the spy-vs.-spy cold war). The New Yorker magazine recently publicly announced it would begin using the technology for its Strongbox service.

It should be noted that many of these techniques are used by terrorists and ordinary criminals today. Law enforcement will no doubt decry their use -- and continue to come up with ways to hack into these privacy tools. <http://www.foxnews.com/tech/2013/05/20/tech-tools-to-keep-one-step-ahead-feds/>

## ***Tracerouting***

Geek Tools Traceroute	<a href="http://www.geektools.com/traceroute.php">http://www.geektools.com/traceroute.php</a> <a href="http://www.tracert.com/cgi-bin/trace.pl">http://www.tracert.com/cgi-bin/trace.pl</a> <a href="http://cities.lk.net/trlist.html">http://cities.lk.net/trlist.html</a> <a href="http://www.traceroute.org/">http://www.traceroute.org/</a>

## UAVs

### The Five Most Deadly Drone Powers in the World

<http://nationalinterest.org/feature/the-five-most-deadly-drone-powers-the-world-12255>

Unmanned aerial vehicles (UAVs) aren't new. Nations have been using drones in combat since at least World War II, and they've made up an important part of the aerial arsenal ever since. In the last two decades, however, the massive expansion of communications bandwidth has combined with the ongoing miniaturization of electronic components to produce a Golden Age of UAV technology. Drones, once relegated to intelligence, surveillance, and reconnaissance (ISR) missions, have become star players in the U.S. Wars on Terror, and now play critical roles in the military establishments of many nations.

What countries have made the most of the drone age? Some of the answers are unsurprising; nations with huge investment capacity and ongoing military conflicts have obvious advantages in the ability to develop drones, and to develop ways of using them for strategic purpose. This article looks at the five nations that have most effectively taken advantage of the Golden Age of the Drone, with more of an emphasis on how these countries have managed innovation, organization, and deployment than on the characteristics of specific weapons.

#### United States

The United States remains, by far, the world's leader in drone technology. A decade of extensive operational work with drones has given the U.S. military tremendous experience with the architecture, design, and employment of UAV technology. Although inter-service and inter-agency conflicts slowed the development of drones in the latter half of the Cold War, the need for airpower in the Wars on Terror has prompted a massive wave of innovation.

Every U.S. service employs thousands of UAVs, conducting missions that range from strike to ISR to communications relay. The drone campaigns over Iraq, Afghanistan, Pakistan, Yemen, and Somalia have captured imaginations, and not always in a good way. Not since the use of B-52s over North Vietnam has an air campaign [earned quite so much international criticism](#). However, these campaigns barely scratch the surface of UAV contributions to U.S. military operations.

The United States is also pushing the limits of drone innovation. However the [UCLASS UAV program](#) works out, it will provide the United States with the foundation for a carrier borne drone capability that can keep U.S. naval aviation vital. The United States has also pioneered work on stealth drones, high altitude surveillance drones, and other vehicles that fill needs across the spectrum of political and military policy.

#### Israel

Like the United States, Israel has extensive experience with drones, having used them for decades in an ISR capacity. The Predator drone itself has an Israeli pedigree, as some of the earliest designs came from an Israeli immigrant to the United States. Israel has taken the same capital, technology-intensive route to drone development as the United States, producing UAVs that fill key roles within a broader surveillance-strike complex.

Drones allow Israel to keep close, constant tabs on Gaza, the West Bank, and southern Lebanon, as well as parts of Syria near the Golan Heights. Particularly relevant for a country that obsesses as much about the potential for prisoners of war as Israel, drones have also taken on a strike role, operating in Egypt and the occupied territories. Perhaps most importantly, Israel has become a huge exporter of drone technology, sending UAVs with support equipment and trainers to a wide array of countries around the globe. The extent to which Israeli technology has directly influenced drone programs in Russia and China remains an open question. However, there is no question that Israeli technology and production is pushing the global drone "race" forward.

#### China

The People's Republic of China, perhaps recognizing how lucrative the emerging international market might prove, has begun to invest heavily in drone production. China has (so to speak) allowed a hundred flowers to bloom with respect to UAV production and development, with both the big state-owned defense enterprises and a host of smaller, private suppliers trying to enter the market. This has resulted in a

bewildering array of options for the Chinese government, with drones that have the potential to fill a lot of different niches in the PLA's military framework, including counter-terror operations.

The Chinese have also begun to work out the implications of drones for their A2/AD system, as well as for ongoing efforts at "salami slicing" in the East and South China Seas. With respect to the former, drones in the ISR role can provide the critical data input that China's systems of anti-access systems need to function. On salami slicing, drones offer a degree of escalatory uncertainty that suits a "relaxed" aggressor interested in probing the defenses and resolve of a coalition of opponents. Using drones gives China access to airspace over contested areas, without conveying the same threat that manned aircraft would offer.

China will remain a huge player in the drone market moving forward, and seems to be taking the right tack by emphasizing public-private cooperation in technology. This is an approach that the Americans and Israelis have also adopted.

#### Iran

Whatever threat Iran may pose to Middle East stability, the Islamic Republic is rarely mentioned in lists of cutting edge technology. Iran regularly boasts of extremely sophisticated systems (recall the [Qaher 313 "stealth fighter"](#)), and many of its claims on military technology need to be taken with a grain of salt.

But on drones, Iran [punches well above](#) its technological weight. Iran has struggled with putting together the systems needed to deploy a tactical attack drone, but it's done a good job with [affordable, reliable engines and airframes](#). Iran's experience shows that modest investment can, in the right circumstances, have a high payoff. Iran has used drones extensively in Syria and Iraq, supplying the Iraqi and Syrian governments with recon data and identifying targets for manned airstrikes. Altogether, Iran probably has more operational experience with drones than any country other than Israel or the United States.

Iran has also had success in [exporting its drones](#) to proxies, such as Hezbollah, where they mostly play the same ISR role. Hezbollah has experimented with suicidal drones (not quite the same thing as cruise missiles, but not that far off), and Israel can probably anticipate a more complex aerial environment in the next Lebanon conflict.

United States Air Force Unmanned Aircraft Systems Flight Plan  
2009-2047

<http://www.dtic.mil/cgi-bin/GetTRDoc?AD=ADA505168&Location=U2&doc=GetTRDoc.pdf>

The Golden Age of Drones didn't strike at quite the right time for Russia. In the 1990s and 2000s, Russia was saddled with a large, inefficient, not particularly innovative military-industrial complex that was essentially hung over from the Soviet years. Developing advanced new UAVs, especially ones that depended on access to high tech communications networks, didn't fall into the wheelhouse of the Russian system.

Things have changed, somewhat. The Russian aerospace industry still has enough kick to produce interesting airframes, and Russia has accumulated enough war experience in the last fifteen years to develop some good operational doctrine with respect to employment. Russia also seems to have a good appreciation of what UAVs [can offer from a military standpoint](#).

There's no indication thus far that Russia has used attack drones in Ukraine, but there's little doubt that Russian forces [have used UAVs](#) to identify and track Ukrainian forces, supplying data to "separatists." Russia has also explored the [potential for drones in the Arctic](#). Long-range surveillance drones can undoubtedly improve Russia's ability to manage and monitor its vast northern regions.

#### Conclusion

Looking ahead, the United States, China, and Israel will almost certainly remain on this list ten years from now. Each of these countries has developed the industrial capacity and human capital for drone development, and each has good reasons for staying on the edge of innovation. Iran and Russia may struggle to stay on top. Boxers can only punch above their weight for so long, and notwithstanding the creative ways that Iranians have employed drones thus far, a basic lack of industrial and innovative capacity relative to larger military-industrial complexes may eventually hamstring them. The Russian MIC remains large, but problems with the Russian economy, combined with the hugely expensive demands of reforming and recapitalizing the entire Russian military, could slow progress on drones. Who might replace these countries? Good candidates include India, Brazil, and several EU countries. India combines familiarity with Russian practice, friendship with the United States, and an innovative tech sector. Brazil's military aviation industry continues to grow, and the Brazilian military may become a reliable customer. France, when it decides to move in that direction, could potentially produce some very effective UAVs. The field remains open, and opportunities abound.

## SUSPICIOUS BEHAVIOR COULD INDICATE TERROR PLOTTING

By Anthony L. Kimery

### '... being able to distinguish the ordinary from the extraordinary'

Coinciding with concerns among some intelligence services that suspected Hezbollah "sleeper cells" in Canada have been activated, Canadian law enforcement authorities increasingly are training for spotting potentially suspicious activity and behavior that may indicate terrorists are conducting surveillance or other goings-on in preparation for targeting a specific structure or location for attack.

Several years ago, Robert David Steele, an outspoken veteran intelligence officer, told HSToday.us that "50 percent of the 'dots' that prevent the next 9/11 will come from bottom-up [local] level observation" and unconventional intelligence from "private sector parties."

Since 9/11, the Department of Homeland Security (DHS) and law enforcement in the Washington, DC capital region have actively urged citizens to report "suspicious activity." Mobile electronic signs urging people to report suspicious activity are routinely placed at strategic locations throughout the metro area for periods of time. The last one of these portable warnings I saw was at the convergence of Key Bridge and George Washington Memorial Parkway on the Virginia-side of the Potomac River just across from Georgetown.

Lynda Howes, a civilian member of the emergency event and management unit of the Calgary (Canada) Police Service, told attendees of the "Tri-lateral Security Conference" in Calgary last week that law enforcement must learn how terrorists operating in order to prevent attacks. She said counterterrorism is only manageable if it is tackled at the grass roots level. She explained that it's vital that everyone - including the public, the police, government and private industry – recognizes the potential indicators of terrorism and what actions to take if, and when, they are encountered.

Howes said terrorists must recruit members, research their targets, procure resources, receive, transfer and conceal money, and provide transportation and communication.

And "each one of those phases represents an activity" that can be identified if a person is trained to know what to be on the look-out for. "Those activities are associated with a behavior. Once we have that behavior, those are things you and I will be witnessing every single day and are things we can pick up on as potential indicators."

In late 2002, The Air Force's Office of Special Investigations launched "Eagle Eyes," a program to "deter terrorism by recognizing and reporting pre-attack activities," according to an OSI memo.

"Every terrorist act is preceded by observable planning activities," according to the OSI memo. "When troops and citizens know what to look for and how to report suspicious activity, terrorist acts can be prevented."

Department of Defense personnel have routinely been advised to report suspicious reconnoitering of military facilities, people asking detailed information about specific sites, and any other activity which could indicate a "dry run" attack.

DHS says "knowing what to look for and being able to distinguish the ordinary from the extraordinary are the key elements to successful surveillance detection."

"A persistent stream of reported suspicious incidents requires an understanding of the purpose of terrorist surveillance, to know what terrorists look for, and how they conduct surveillance operations," DHS's advice states.

DHS states "terrorists conduct surveillance to determine a target's suitability for attack by assessing the capabilities of existing security and discerning weaknesses in the facility. After identifying weaknesses, they plan their attack at the point of greatest vulnerability."

"Because terrorists must conduct surveillance—often over a period of weeks, months, or years—detection of their activities is possible," DHS continued, noting, "regardless of their level of expertise, terrorists invariably make mistakes. The emphasis of surveillance detection is to key in on indicators of terrorist surveillance activities."

DHS states "successful surveillance detection efforts require immediate reporting of incidents similar to the following:

- o Multiple sightings of the same suspicious person, vehicle, or activity, separated by time, distance, or direction;
- o Individuals who stay at bus or train stops for extended periods while buses and trains come and go;
- o Individuals who carry on long conversations on pay or cellular telephones;

- Individuals who order food at a restaurant and leave before the food arrives or who order without eating;
- Joggers who stand and stretch for an inordinate amount of time;
- Individuals sitting in a parked car for an extended period of time;
- Individuals who don't fit into the surrounding environment because they are wearing improper attire for the location or season;
- Individuals drawing pictures or taking notes in an area not normally of interest to a tourist or showing unusual interest in or photographing security cameras, guard locations, or watching security reaction drills and procedures; and
- Individuals who exhibit suspicious behavior, such as staring or quickly looking away from individuals or vehicles as they enter or leave facilities or parking areas

Other activity which should cause a heightened sense of suspicion include:

- Suspicious or unusual interest;
- Surveillance (suspicious in nature);
- Inappropriate photographs or videos;
- Note-taking;
- Drawing of diagrams;
- Annotating maps; and
- Using binoculars or night vision devices

"Terrorists may also employ aggressive surveillance techniques, such as making false phone threats, approaching security checkpoints to ask for directions, or 'innocently' attempting to smuggle nonlethal contraband through checkpoints," DHS's advice states. "The terrorists intend to determine firsthand the effectiveness of search procedures and to gauge the alertness and reaction of security personnel."

Karen Morley, senior director of TerraGo Technologies, Atlanta, Ga., who began her career in the geospatial industry in the US Air Force as a target intelligence specialist, told HSToday.us that terrorists need to conduct careful surveillance of a potential target in order to be confident that they can pull off a successful attack.

In 2004, RAND developed the book, "[Mapping the Risks: Assessing Homeland Security Implications of Publicly Available Geospatial Information](#)," for the National Geospatial-Intelligence Agency, determined that "potential attackers, such as terrorist groups or hostile governments, are more likely to [utilize] reliable and timely information ... such as through direct access or observation. In addition, many types of attacks, such as those by ground parties, are likely to require detailed information for attack planning purposes (depending on the target type and mode of attack). This type of information, which mostly comes from such nongeospatial sources as engineering textbooks or human expertise on the operations of a particular type of industrial complex, is essential for attackers to have a high confidence in their plan."

But according to John Bumgarner, an 18-year veteran of special operations who has worked with most of the three-letter intelligence agencies at one time or another and is now research director for security technology at the US Cyber Consequences Unit, a non-profit research institute, because of training like that promoted by Howes it has become more and more difficult for terrorists to physically recon targets, especially in the US.

"To actually start planning very detailed reconnaissance of a building, and all the streets that go into it, and all the alleyways and everything else, that could require a lot of physical reconnaissance on the ground - it's not something that you can actually just easily do anymore," Bumgarner stressed, especially in the post-9/11 environment where conspicuous photographing, videoing and other apparent physical surveillance can, and has - repeatedly across the nation - caused people to be detained and questioned about their activities.

"In other words," said Bumgarner, "it's gotten a whole lot harder for a terrorist to conduct the kind of conspicuous physical surveillance of a target that's necessary for conducting a large-scale or mass casualty attack."

Consequently, more sophisticated terrorists are utilizing easily accessible geospatial information, which was examined in the April HSToday cover report, "[Every Eye a Spy](#)."

## Taking Advantage Of Search Engines and RSS Feeds To Do Your Work

My favorite search engines, and I'm sure you have your favorites, are the Copernic Suite followed by Google and then others. I use them extensively and use them to my advantage when doing research and I just don't have the time to sit in front of the computer and type in all the keywords. First let me start with the Copernic Suite. It is comprised of [Copernic Agent Professional](#), [Copernic Tracker](#) and [Copernic Summarizer](#). Tracker and summarizer are exactly what the titles imply. The tracker keeps track of websites and alerts you when there are changes to it. Summarizer will take an article and summarize it to a more manageable article; and you determine the number of words in the summarized article. The following applies to copernic agent professional and how to customize it to work for you.

You'll notice on the graphic below how I have formatted my copy. On the right side is a box where folders are created as I have done. In the top center are the keywords I used for the Iran folder in the box at right. I have programmed the engine to do automatic searches at 0800 every day (by this time I have had my first cup of coffee and just waiting for all the results to come in). You also will notice that on the search term "Iranian military capabilities" there is a number 24 in parenthesis. These are the new results that came in at 0800, so you will always know about new results. Just below the box with the keywords are all the hits that came in. The green check mark indicates that it is a valid link. Now look at the left hand side in the quick search box and you should notice that I have 1005 search engines enabled. With these many search engines enabled you should be able to pin down what you're looking for.

The screenshot displays the Copernic Suite interface with several panels:

- Top Bar:** Favorites, Tools, Window, Help.
- Toolbar:** Analyze, Save Pages, Filter, Find in Results, Browse, Summarize.
- Results Panel:** Shows search results for "iranian military weapons", "iranian websites", "iranian naval capabilities", and "iranian military capabilities". The last result shows 40 results with "(24 new)".
- Folders Panel:** A tree view of tracked categories including Africa, Al Qaeda, Drug War, HUMINT, IEDs and EFPs, IMINT, Iran, MASINT, OSINT, and SIGINT.
- Quick Search Panel:** Shows "1005 engines enabled" and a list of categories: Favorites, The Web, Newsgroups, E-mail Addresses, Images, My Categories, Terrorism, Business & Economy, Computers & Internet, Encyclopedia & Reference, Entertainment & Media, Government & Law, News, Recreation, Home & Lifestyle, Shopping.
- Common Tasks Panel:** Create new search, Analyze results, Browse results, Filter results, Organize categories.
- Bottom Panel:** Displays search results for "USPACOM Speeches and Transcripts", "Iran Navy", "NAVAL POSTGRADUATE SCHOOL", "Maritime Interdiction in the Gulf", and "Fundamentals of Operational Warfighting". Each result includes a preview and a progress bar indicating download status (e.g., 80%, 79%, 77%, 72%).

12:51 PM

Let's now look at Google and see how it can be customized to work for you. What you're looking at now is the traditional page. On the upper right is the "sign in" link. Click on this link to establish an account. Once you establish an account click on the news link to go to the personalized news page.

Clicking on the news link brings up the following page. You'll notice on the left hand side where I have established all keywords of interest to me. I have included all the classical "INTs" along with some others of interest. Clicking on a keyword, for example "explosively formed projectiles", brings up the latest search on that term. I use the same keywords in Copernic above because the results are not always the same for both search engines. By using two search engines to do my bidding I stand a better chance of getting a plethora of results and thus more solid news from around the world.

The screenshot shows a Mozilla Firefox browser window displaying the Google News homepage. On the left, a sidebar titled "My keywords" lists various intelligence-related terms: Top Stories, Recommended, World, U.S., HUMINT, IMINT, SIGINT, OSINT, counterterrorism, "explosively formed proj", "improvised explosive dev", Iraq, "open source intelligence", North Korea, Iranian revolutionary gua, MASINT, GEOINT, Terrorism, and Most Popular. A black arrow points from the "Top Stories" section of this sidebar to the "Top Stories" section on the main news page. Another black arrow points from the "Edit this personalized page" link on the main page to the "Edit this personalized page" dialog box.

**Main Page Content:**

- Top Stories:** Thompson a Target at GOP Debate (New York Times - 45 minutes ago)
- Military probes how nukes flew over US (Chicago Tribune - 4 hours ago)**
- 4 Suspects on Trial in Denmark on Terrorism Charges (Voice of America - Sep 5, 2007)**
- Recommended for ben.benavides@gmail.com**

**Right Sidebar:**

- Auto-generated 20 minutes ago
- Edit this personalized page**
- Remarks by the CIA Director at Ceremony for the NCS Director
- Terrorism in Germany thwarted, police say
- IMI Urban Fighter APC/IFV Out-MRAP's MRAP for Anti-IED/EFP Protection
- Studying IEDs
- Rift on Iraq as Bush meets man tipped as next Australian PM
- Craig's conundrum — Day 10
- 906 Human West Nile Virus Infections Reported In US To Date
- Apple to launch touch-screen iPod, lower price of iPhone

**Edit this personalized page Dialog:**

This dialog box allows users to rearrange and edit their personalized news sections. It contains a grid of 16 boxes, each representing a news category. The categories listed are: World, U.S., HUMINT, IMINT, SIGINT, OSINT, counterterrorism, "explosively formed proj", "improvised explosive dev", Iraq, "open source intelligence", North Korea, Iranian revolutionary gua, MASINT, GEOINT, Terrorism, and Most Popular. Below the grid are buttons for "Add a standard section" and "Add a custom section". At the bottom are "Save layout", "Show headlines only", and "Reset page to default" buttons.

Clicking on the "edit this personalized page" brings up the following where the user enters all the keywords of interest to them. You'll notice that all my keywords match those on the left hand side.

...and of course I also have my favorite RSS feed called “RSS Bandit.” I have gotten so used to it that I can manipulate it quite easily. I especially like the search feature in it. There are several other RSS feeds that exceed the capabilities of RSS Bandit but I am so comfortable with it that I will continue using it for a bit longer.

## RSS Feed Camp

<http://www.feedcamp.com/top-feeds/?d=2013-8-3&s=a>

The screenshot shows the RSS Bandit application window. On the left, there's a sidebar titled "My Feeds" with categories like "Ganga" (23), "Homeland Security" (5), "IEDs" (25), "HUMINT" (74), "IMINT" (74), "MASINT" (4), and "OSINT" (282). The main area displays news items from "AL JAZEERA ENGLISH (AJE)" with headlines such as "Zimbabwe PM rejects 'fraudulent' poll results", "European countries to shut Yemen embassies", "Cambodia parties agree to poll fraud probe", "Dreadly bombing hits Afghanistan's Jalalabad", "Iran supreme leader endorses next president", "Syrian warplane attacks Lebanese border area", "Central Europe remains in grip of heatwave", and "Australia signs refugee deal with Nauru". Each item includes a timestamp (e.g., 8/3/2013 8:4...). At the bottom right of the main window, there's a logo for "RSS BANDIT" with the tagline "Your desktop news aggregator" and a version number "v1.5.0.17". The system tray at the bottom shows icons for various applications like Taskbar, Internet Explorer, and File Explorer.

How do you subscribe to a site's RSS feed?

<http://techland.time.com/2013/07/01/r-i-p-google-reader-hello-four-best-rss-reader-replacements/>

Everyone handles this differently, but in most cases, you're looking for a button (usually orange) on each site that reads “RSS” or an icon (also usually orange) that look like a wireless symbol tipped on its side (a dot with two curved lines stacked above, extending to the right). If you click on TIME’s [RSS link](#) (top of [the homepage](#), right-hand side), you’ll jump to [a sub-site](#) and find our feeds sorted into categories like [Top Stories](#), [Most Viewed](#) or [Techland](#). Click any of these and you’ll conjure a list of popular Web-based readers to import the feed to. If you’re using an unlisted reader, you’re looking for the “view XML” option, which takes you to the actual RSS URL (in this case, [TIME Tech’s](#)); drop that into your RSS reader’s “add feed” or “subscribe” dialog box and you’re in business.

**Tricks Of The Trade For The Open Source Analyst**  
**Looking For Old Information**  
**By Etan Horowitz**  
***The Orlando (Fla.) Sentinel***

Things move so fast on the Internet that sometimes the information you are looking for has been removed or changed. Using Google's Cached Links and the Internet Archive's Wayback Machine can help you find what you are looking for even if the content is no longer online.

1. If you know that the information you are searching for is no longer online, go to Google.com.
2. Enter as much information as you can into Google's search field and hit enter.
3. When your search results appear, find the result with the most appropriate description and click on the link at the bottom left of the result that says "Cached." This will open a snapshot of the Web page that Google took as it was indexing it.  
Clicking on the cached link may also be useful if you ever click on a search result link that doesn't work.
4. If you don't know exactly what you are looking for or are curious about a previous version of a Web page, go to [web.archive.org](http://web.archive.org) to search the Internet Archive's Wayback Machine, an archive of 85 billion Web pages dating back to 1996.
5. Type the URL of the Web site you want to see and click "Take Me Back." This will bring up a collection of archived pages from that Web site, organized by year.

Cached Links may not be available for all Web sites and less popular Web sites may not be included in the Internet Archive Wayback Machine.

## Recommended Search Tips

### \* \* \* Google Can Do That? \* \* \*

\* Google lets you search for a range of numbers, in any format. To include a number range in your search query, type in the lower and upper numbers, separated by two periods - e.g., 15..50 I had a chance to try out this feature in a real-life search; I wanted to find a set of wireless headphones on Amazon.com costing between \$50 and \$100. I typed in the query (wireless OR cordless) headphones \$50..\$99 site:amazon.com and, sure enough, I retrieved a wide selection of wireless headphones within my price range.

Note that Google is smart enough to recognize decimal points - some of the items I retrieved weren't an even dollar amount but were, for example, \$57.83. This feature could also come in handy if you are looking for a mention of a range of years.

\* Speaking of date-searching on Google, you can limit your search to only those pages added or changed within the past [whatever] days. This can be a useful feature if you re-run a search regularly; just limit your search to the pages added or modified since you last ran your search. You can do this not by adding text in the search box but by modifying the search results page URL by adding the following text to the end of the URL and clicking [Search]: &as\_qdr=dn (where n is the number of days you want searched) So, for example, to limit my search to the last 18 days, I would add &as\_qdr=d18 to the end of the search results page URL.

Keep in mind that this isn't a perfect date-limiting search. Some web content management systems automatically refresh a web page frequently, without necessarily making any changes to the page. Those pages will have a recent date but the content within them may have been unchanged for months.

\* If you are based in the US, you can search for local companies through your cell phone, regardless of whether or not your phone has web capability. If you call 1-800-GOOG411 (1-800-466-4411), you will be asked to say the city and state you want information on - Boulder, Colorado, for example - then you say the type of business or specific business name you want - for example, "book store" or "Barnes and Noble". A text-to-speech program will read you the top eight results from its local search (<http://local.google.com>). If you want, Google can automatically dial any of the first eight businesses' phone number, or you can ask to have the address and phone number read to you.

You can also get quick answers to simple queries by texting Google from a US cell phone. Send a text message to 466 453 (GOOGLE) and then type your query in the text box and send it. Within seconds, you will receive a text message with one of Google's Quick Answers. The default is for Google to take your query and attempt to find a Quick Answer. If you want a search of the web, put the word web at the beginning of your search, such as web avian flu. This will return you a text message with a snippet of the first search result, along with a link to mobile-formatted page of the search results. See <http://sms.google.com> for more information on this service.

I recently discovered [Intelways](#), a nifty way to search a number of search engines sequentially. It's not a metasearch engine; it lets you click from one resource to another. Its main claim to fame is that it categorizes the tools by broad type of search -- general, images, video, news, social (blogs, social networking sites, social bookmarking sites, etc.), file-type searching, reference, academic, business, tech and (natch) shopping. (Source: Bates Information Services, [www.BatesInfo.com/tip.html](http://www.BatesInfo.com/tip.html) )

## Getting The Most Out Of Google

Source: <http://toddington.com/>

The Internet and Social Media is having a profound effect within the law enforcement and regulatory communities. Cost effective and able to provide decision makers with timely information, online Open Source Intelligence (OSINT) has frequently proven itself highly effective in providing critical leads in ongoing investigations and intelligence gathering activities.

The sheer magnitude of cyberspace poses numerous challenges to the online investigator however - Consider that every 60 seconds some 72 hours of video are uploaded to YouTube, nearly 700,000 pieces of content are shared on Facebook, some 4 thousand images are uploaded to Flickr and nearly 500 new websites are created. And if these statistics don't seem overwhelming enough, give some thought to recent estimates that the average Internet user is doubling the amount of information they share online annually.

With the number of people online now estimated at 2.25 billion and expected to top 3.5 billion by 2017, we are connected like never before and we are awash in information.

Using the unstructured approach and simple search techniques typical of so many Internet users, the majority of investigators waste time and do not find all of the critical information relevant to their research projects.

Just as successful investigative work in the physical world requires specialized training and creative thinking, an online investigator must know what questions to ask, where to ask the questions and how to ask the question if they are to be consistently effective.

While there are many methods of maximizing the effectiveness of search tools, a simple technique to get the most out of just about any search engine is through the use of what we call "Enforced Term Operators".

A screenshot of a Google search results page. The search bar at the top contains the query "juan also". Below the search bar, a navigation bar includes links for "Web", "Images", "Shopping", "More", and "Search tools". The "Web" link is underlined in red. Below the navigation bar, the text "About 916,000 results (0.27 seconds)" is displayed. The first result is a link to a Facebook profile: "Juan Elso | Facebook" followed by the URL "https://www.facebook.com/jalso1". A snippet of the page content below the link reads: "Juan Elso is on Facebook. Join Facebook to connect with Juan Elso and others you may know. Facebook gives people the power to share and makes the world ...".

### Searching Names (Quote Marks to Enter Keywords as a Phrase)

One of the most popular enforced term operators is the use of quote marks when entering keywords into a search engine. Quote marks around keywords will force the search engine to produce results showing the keywords in the exact order that they were entered, a particularly useful technique when querying a subject's name.

A screenshot of a Google search results page. The search bar at the top contains the query "juan also". Below the search bar, there are five navigation links: "Web" (which is underlined in red), "Images", "Shopping", "More", and "Search tools". A message below the links says "About 3,730 results (0.24 seconds)". The first result is a link to a Facebook profile for "Juan Elso | Facebook" with the URL <https://www.facebook.com/jelso1>. The snippet below the link reads: "Juan Elso is on Facebook. Join Facebook to connect with Juan Elso and others you may know. Facebook gives people the power to share and makes the world ...". The second result is a link to a blog post titled "JUSTICE BUILDING BLOG: WHAT ALSO?" from the URL <justicebuilding.blogspot.com/2006/01/what-also.html>. The snippet below the link reads: "Jan 18, 2006 - Rumpole replies: We also know Juan Elso. He has no one to blame but himself. He committed crimes and got caught. Did the feds go after him ...".

As an example, when the name Juan Elso is entered into the Google search engine, some 916 thousand results are produced. Many of these results will be irrelevant to the online research being conducted on the convicted criminal of the same name however, as they are documents containing the two keywords specified, but in no particular order.

Alternatively, when quote marks are used and the name is entered as "Juan Elso", a more manageable 3,730 results are produced.

Quote marks have the effect of forcing the keywords to be entered as a phrase, in this case, a first name immediately followed by a last name. The benefit is in using quote marks on a name is the elimination of potentially hundreds of thousands of irrelevant results – documents that contain the same two keywords but not in the order intended.

Unique to Google, and useful when conducting a search on a person, a "wildcard" operator can also be added to the search string. The asterisk, when used within a string of keywords encompassed by quote marks, will match up to four consecutive wildcard words in that phrase.

A screenshot of a Google search results page. The search bar at the top contains the query "juan \* also" followed by "site:uscourts.gov". Below the search bar, there are five navigation links: "Web" (underlined in red), "Images", "Shopping", "More", and "Search tools". A message below the links says "About 55 results (0.29 seconds)". The first result is a link to a PDF document titled "[PDF] [DO NOT PUBLISH] IN THE UNITED STATES COURT OF ... - Ju..." with the URL [www.ca11.uscourts.gov/unpub/ops/200712605.pdf](http://www.ca11.uscourts.gov/unpub/ops/200712605.pdf). The snippet below the link reads: "Feb 8, 2010 - Juan Carlos Elso appeals his conviction and sentence for money laundering and conspiracy, pursuant to 18 U.S.C. § 1956(a)(1)(B)(i) and (ii), ...". The second result is a link to another PDF document titled "[PDF] USA v. Juan Carlos Elso - 11th Circuit" with the URL [www.ca11.uscourts.gov/opinions/ops/200614954.pdf](http://www.ca11.uscourts.gov/opinions/ops/200614954.pdf). The snippet below the link reads: "Jun 19, 2009 - Juan Carlos Elso's convictions and sentences on two counts of conspiracy to commit money laundering (18 U.S.C. § 1956(a)(1)(B)(i)) (Count 1) ...". The third result is a link to a third PDF document titled "[PDF] USA v. Juan Carlos Elso - 11th Circuit" with the URL [www.ca11.uscourts.gov/opinions/ops/200413043.pdf](http://www.ca11.uscourts.gov/opinions/ops/200413043.pdf). The snippet below the link reads: "Sep 2, 2005 - Juan Carlos Elso appeals his conviction and sentence for money ...".

Using an asterisk between a first and last name (for example, "Juan \* Elso") can be a powerful way of finding previously unknown middle names and even spouses (i.e. a result of John and Mary Doe when entering "John \* Doe") who could then become secondary search subjects.

## Further Enhancing Results by Restricting to a Specific Domain

In this example, a search on Juan Elso, a convicted US felon, the site: command can also be used to instruct Google to only return results from specific sites. Assume you are looking specifically for documents relating to US federal court proceedings in which Elso was a party: By entering the query as "juan \* elso" site:uscourts.gov Google will produce results only from the United States Federal Judiciary Web site (uscourts.gov) and also specific to the subject's full name (Juan Carlos Elso).

## Specific Spelling

A key problem with current search technology is that it is essentially “dumb”; while search engines can effectively match keywords, they are not yet able to properly evaluate context and irrelevant sites will often be returned among any given search results.

Consider that variations in the spelling of a word may significantly affect search results: Entering the American spelling of the phrase "**Organized Crime**", the Google search engine will produce some 12.4 million hits – Using the UK spelling "**Organised Crime**" Google produces over 3.5 million results (of completely different pages). Further illustrating this point, "**Marihuana**" produces 32 million results while "**Marijuana**" produces over 105 million very different results. This lack of contextual understanding can sometimes have significant implications when searching for people's names (i.e. "**Rob**", "**Robert**", "**Bob**", "**Bobby**") online.

Google is a remarkable tool but it is important to always consider that it cannot necessarily understand the meaning of what you are asking and it cannot be relied upon to accurately evaluate context.

Correctly structuring your queries will produce better results and save you time.

A saying popular with computer programmers, "Garbage In, Garbage Out" applies also to online search; a badly constructed query will result in ineffective results - Learning essential online research skills is the key to efficiency and assuring yourself that you really are finding as much relevant information as possible online.

The Founding Fathers gave the free press the protection it must have to bare the secrets of government and inform the people.   Hugo L. Black, U.S. Supreme Court Justice
